/n software

/n software Red Carpet Subscription Q1 2008

Write communications, security and e-business applications.

- Includes components for FTP, IMAP, SNMP, SSL, SSH, S/MIME, Digital Certificates, Credit Card Processing and e-business (EDI) transactions
- Free updates, upgrades, technical support and new releases for a year

/n software Red Carpet Subscription

IP*Works!
Includes IP*Works! which is a comprehensive framework for Internet development.

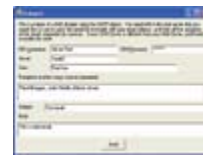

Internet Communications
ATOM, REST, MX, DNS, RSS, NNTP, SMPP, POP, Rexec, Rshell, SMTP, SOAP, Telnet, Ping, TFTP, FileMailer, NetClock, FTP, HTTP and more.

Secure Components
/n software Red Carpet Subscription includes secure versions of many of the IP*Works! components.

IBiz Integrator Products
Components for Internet payment, accounting, management, and other common e-Business services.

S/Shell
Allows developers to rapidly build SSH secured applications including secure file transfer, secure remote login, secure email etc.

Everything in One Subscription
There are no technology restrictions, so you get everything. .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X.

One developer, multiple workstations, all /n software products.

/n software Red Carpet Subscription gives you everything you need in one package - components for every major protocol from FTP to SNMP, SSL and SSH security, S/MIME encryption, Digital Certificates, Credit Card Processing, ZIP compression, Instant Messaging, Shipping and Tracking, and e-business (EDI) transactions.

There are no licensing restrictions, so you can code on your work machine, your notebook, or even your home machine. Plus there are no technology restrictions, so you get everything, .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X. You receive quarterly update CDs with free updates,

upgrades and new releases. It includes more than \$30,000 worth of software including: all /n software products - IP*Works!, SSL, S/MIME, S/Shell, Zip, EDI, IBiz Integrators for QuickBooks, Enterprise Adapters, E-Payment, Vital/TSYS, Paymentech, USPS, etc.

/n software Red Carpet Subscription includes IP*Works! which is a comprehensive framework for Internet development and is the core building block for most /n software products. IP*Works! eliminates the complexity of Internet development by providing easy-to-use, programmable components that facilitate tasks such as sending email, transferring files,

managing networks, browsing the Web, consuming Web services, etc. It includes support for all major internet protocols: ATOM, DNS, FileMailer, FTP, HTMLMailer, HTTP, ICMPport, IMAP, IPDaemon, IPInfo, IPMonitor, IPPort, LDAP, MCast, MIME, MX, NetClock, NetCode, NetDial, NNTP, Ping, POP, RCP, REST, Rexec, Rshell, RSS, SMPP, SMTP, SNPP, SOAP, Syslog, Telnet, TFTP, TraceRoute, UDPPort, WebDav, WebForm, WebUpload, Whois, XMLp and XMPP.

Also included in the subscription is IP*Works! SSL which is a suite of SSL-enabled components that are secure drop-in replacements for the components in the "classic" IP*Works! package.

The components are fast, robust, and reliable and consume a minimum of resources. They are small and lightweight with no dependencies on external libraries. Included are native development components for all supported platforms and component technologies.

IP*Works! includes a complete unified framework with a common, easy to learn object model and simplified interfaces allowing you to be more productive. The components are rigorously tested having undergone thousands of hours of testing. You also get detailed reference documentation, hundreds of sample applications and fully-indexed help files.

ComponentOne

ComponentOne Studio Enterprise 2008 v2

Over 180 components for WPF, .NET, ASP.NET, ActiveX & Mobile Devices.

- Full suite of rich and flexible .NET Windows Forms components
- Rapid development of innovative & demanding Web applications
- Now includes Schedule for WPF, Chart for WPF and Grid for WPF

ComponentOne Studio Enterprise

Create rich user interfaces for WPF, ASP.NET, Windows Forms, Mobile and ActiveX applications.

ComponentOne Studio Enterprise includes over 180 components for WPF, .NET, ASP.NET, ActiveX and Mobile Devices. It offers a complete solution that targets all runtime environments and all application layers (data, presentation, reporting and transformation). The cornerstone of ComponentOne Studio Enterprise is the data layer, which encapsulates business logic in reusable assemblies called data libraries. This data layer provides a comprehensive data and business objects framework that serves .NET applications of any range, scalability, and architecture.

The ComponentOne presentation layer consists of a suite of best-of-breed user interface controls that interoperate seamlessly with the data layer, combining data manipulation

capabilities with flexibility in GUI design. The included Report Designer is a standalone application for creating XML-based report definition files at design time. At runtime, reports are rendered in a customizable preview control (WinForms) or as HTML (WebForms). The transformation layer extracts, converts, loads and saves data from a variety of heterogeneous sources, including popular file formats such as XML, PDF, and ZIP. It is used internally by the presentation and reporting layers, and is surfaced in standalone components such as C1Zip and C1Pdf.

The ASP.NET toolset includes eCommerce (PayPal), file format management (PDF, Flash, XLS, ZIP), calendars, charting (2D and 3D), rich text editing, grids, input and mask

Schedule for .NET
Studio Enterprise includes Schedule for .NET, for developing Outlook-style desktop scheduling applications.

Dynamic Charts AJAX
Any chart can take advantage of the built-in AJAX support to dynamically render its image without postback.

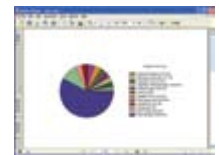

Virtual Scrolling in C1WebGrid
AJAX-enabled virtual scrolling for a fixed-height grid with a vertical scrollbar is now available.

WebInput for ASP.NET
Includes an enhanced TextBox control that uses an input mask to distinguish between proper and improper user input.

WebGrid for ASP.NET
Includes advanced functionality like horizontal scrolling and fixed columns.

Create PDF Files
Create PDF documents from your applications. Supports security, compression, outlining, hyperlinking, and attachments.

controls, menus and toolbars, reporting, scheduling and spelling features. The components are AJAX-ready and fully interoperate with Microsoft's ASP.NET AJAX Framework, so you can AJAX-enable your Web application without the need to understand the concepts of AJAX. The WebEditor component is a WYSIWYG rich-text editor for ASP.NET. It allows you to edit text in design, source (HTML) and split modes. It replaces any TextBox with an intuitive Microsoft Word like editor, which enables even non-technical users to easily author and manage HTML content. The customizable toolbar, built-in spell checker, and complete JavaScript client-side object model allow you to easily manipulate your text - with or without code.

The .NET Windows Forms toolset includes barcodes, charting (2D and 3D), grids, input controls, labels, editors, lists and combos, menus and toolbars, print

and preview features, reporting, ribbon UI features, scheduling, file format management (PDF, Flash, XLS, ZIP) sizing, spelling and tooltips. Smart designers are included in select .NET Windows Forms components to allow you to set the components' most popular properties without leaving the design surface. The included grid component uses ADO.NET to completely manage the database interface, offering the ability to browse, edit, add, delete and manipulate tabular data.

The WPF toolset includes: Schedule for WPF - a suite of tools delivering Schedule, Month Calendar and Multi-Month Calendar components for the WPF platform. Chart for WPF - visually stunning 2D and 3D bar, area, line, pie and column charts that will bring your WPF application data to life. Grid for WPF - a set of controls that allows you to integrate grid functionality into your WPF applications.

Data Dynamics

ActiveReports for .NET V3.0

The best selling report writer with no runtimes or royalties.

- ActiveReports Designer now includes design-time preview tab
- Viewer control now supports annotations
- ActiveReports engine features seven new chart types

ActiveReports for .NET

Generate a wide variety of reports from your .NET applications (Now includes Visual Studio 2008 support).

ActiveReports for .NET lets you easily create reports via the fully integrated designer. It has a familiar user interface and supports C# and Visual Basic .NET. It includes a report creation API with complete runtime access to report objects and members and a fully exposed object model.

ActiveReports for .NET has the ability to host 3rd party .NET controls and user controls within your reports and includes export filters for Adobe PDF, Microsoft Excel, RTF, HTML, text and TIFF formats. It can be used in both Windows based and Web based applications.

ActiveReports for .NET also includes a Windows Viewer control that supports split and multi-page views, has a "Table of Contents" pane with a thumbnail view tab and can perform text searches of reports. It also allows you to customize the viewer's toolbar.

The Professional Edition of ActiveReports for .NET features an end-user report designer control that allows you to host the report designer in your own applications to provide end users with the ability to create and modify reports. It supports zooming to magnify the design surface of the report for more precise placement and viewing of report controls. It also includes a server-side Web Viewer control that takes advantage of ASP.NET's HTTP handlers to allow you to display reports without having to write custom code.

Reports can be previewed at design time by clicking the preview tab at the bottom of the designer and .NET data components can be dropped directly onto the design surface of a report, resulting in a visual representation of the data component in the new report component tray. This makes it easy to add custom datasets to an ActiveReport at design time.

Viewer Annotations
Annotations can be placed on the report to pass notes and special instructions on to users and developers.

End-User Report Designer Editing
Allow end users to edit their reports and save new reports or load old ones.

Viewing Web Reports
The WebViewer control provided in the Professional Edition allows you to write less code and view reports more quickly.

OLEDB Data Sources
ActiveReports for .NET supports any .NET OLEDB data source.

3rd Party Controls
ActiveReports for .NET supports the use of Windows Forms-based 3rd party controls with the report designer.

Subreports
With ActiveReports, reports may contain any number of child reports by using the Subreport control.

Other features in ActiveReports for .NET include a chart control (3D area, 3D bar, 3D clustered Bar, 3D doughnut, 3D line, area, bar, Bezier, bubble, candle, doughnut, funnel, Gantt, HiLo OpenClose, Kagi, line, plotXY, point and figure, pyramid, renko, scatter etc.), updated memory management features, a rich text control that is capable of rendering HTML and RTF tables, and an integrated script window with syntax highlighting.

Data access in ActiveReports for .NET is via OLEDB and SqlClient report data sources. It binds to DataSet, DataView, DataTable, any RowCollection and any class that implements the IList interface. The DataSource property can be modified at runtime to create ad hoc (dynamic) reports or reports can be unbound. ASP.NET integration allows quick viewing of reports on the Web with the Web Viewer control. ActiveReports for .NET provides printing capabilities with an ActiveX viewer and Acrobat Reader viewerType properties. It also provides an RPX file HTTP handler

to allow you to place a report on your Web server and make it available via a hyperlink to your Internet users in HTML or PDF. A compiled report HTTP handler is also provided to allow direct access via a hyperlink to a report compiled in an assembly on your server. The product is easy to deploy, the reporting engine is a single, managed, strongnamed assembly. Assemblies can be distributed using XCopy or the global assembly cache (GAC).

ActiveReports for .NET comes with a report wizard and a Microsoft Access report conversion wizard so you can start creating reports quickly. It is written in managed C# and provides integration with the Visual Studio .NET IDE. This allows Visual Studio .NET programmers to leverage their current programming language (C# or Visual Basic .NET) when programming with ActiveReports for .NET. The product is based on a per developer licensing scheme, and it is royalty-free to distribute.

Data Dynamics

ActiveReports for .NET

Need the ability to create serious reports
for your company?

Look no further.

HARDCORE REPORTS

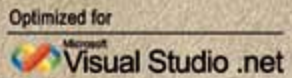

ActiveReports for .NET helps you deliver hardcore reports on time, on budget, and with your sanity intact. You couldn't ask for more.

- Complete integration with Visual Studio .NET makes it a snap to create reports in a familiar environment.
- Flexible report controls like the chart, barcode, rich text box, and subreport controls provide the look needed.
- Versatile data binding makes it possible to use a variety of data sources in one report.
- Powerful exporting capability allows you to provide reports in the format needed.
- Royalty-free deployment eliminates extra costs for you and your customers.
- End-user report designer allows you to provide your end users with the reporting tools they need (Professional edition).
- HTTP handlers and the Web report server control make it easy to deploy and view server-based reports on the Web (Professional edition).

Developer Express

DXperience v2008 vol 2

All Developer Express ASP.NET, WinForms, WPF components and tools in one package.

- Provides reporting, toolbar, treelist, grid and sidebar functionality
- Add Office style spell checking capabilities to your application
- Now includes scheduling/planning/calendar suite for ASP.NET 2.0

DXperience

All the Visual Studio .NET component suites, libraries and IDE tools produced by Developer Express in one package.

DXperience includes all Developer Express products engineered for Visual Studio and the .NET Framework. With this subscription, you receive all key technologies by Developer Express including IDE productivity tools, business application frameworks, and components for Windows Forms, ASP.NET and ActiveX. In addition to individual tools, you receive complete source code for Windows Forms and ASP.NET components. With the Universal subscription, you also receive eXpressApp Framework which is an instrument for creating business applications quickly and easily.

Windows Forms products include: XtraGrid Suite - a grid control with four data layout options from a simple table to banded multi-line row layout and card views, XtraBars Suite - a complete range of navigation and window layout management tools, XtraScheduler Suite - enables you to incorporate the UI found in Microsoft Office Calendar to your applications with just a couple of mouse clicks, XtraPivotGrid Suite - a data analysis, data mining and visual reporting solution, XtraTreeList Suite - a hybrid tree-view and grid control that has both bound and unbound data access options, XtraVerticalGrid Suite - a 90 degrees rotated grid where records

XtraBars Suite Ribbon Control and Tabbed MDI interface
With the XtraBars Suite you can easily build Ribbons from scratch.

XtraBars Suite
You can create application menu, galleries and contextual tabs in ribbons.

XtraGrid Suite
The XtraGrid Suite not only allows flexible data presentation, it offers you one of the fastest grids on the market.

XtraGrid Suite Master-Detail
The XtraGrid has true support for Master-Detail data presentation. You can use a View of any type as a detail - even a Card View.

XtraReports End-User Designer
The XtraReports Suite features a fully functional End-User Designer.

XtraReports Master-Detail Report
With the XtraReports Suite, you can easily build banded reports and even Master-Detail reports.

are arranged one after another from right to left, XtraNavBar - a navigation control allowing you to build side-bars, explorer bars and Office style navigation panes, XtraEditors a library of over 20 editors that can be used both standalone or embedded, XtraSpellChecker - a Microsoft Office style spell checking component, XtraPrinting Library - a data rendering and visualization system allowing you to construct any printed pages from scratch or print Windows Forms controls like the XtraGrid and more.

ASP.NET products include: ASPxGridView and Editors Library - a robust grid and data editors library for ASP.NET, ASPxPivotGrid Suite - a multi-dimensional analysis component,

ASPxNavBar Suite - Web navigation bar with full AJAX support, ASPxMenu Suite - an extremely lightweight, customizable main and context menu and more.

Windows Forms and ASP.NET products include: XtraReports Suite - a reporting tool that features an extremely easy to use report designer and XtraCharts Suite - a 2D/3D charting solution.

Also included in Universal and Enterprise Editions: CodeRush, Refactor! Pro, eXpress Persistent Objects and 6 ActiveX products (grids, trees, navigation, bars, editors, printing etc.). Priority technical support is also included with updates and upgrades for 1 year.

FarPoint Technologies

Spread for Web Forms V3.0

High-performance, fully-customizable ASP.NET spreadsheet component.

- Outlook style grouping allows users to sort data as required
- Conditional Formatting enables styling based on cell contents
- Now supports "Load on Demand" paging (Virtual mode)

Spread for Web Forms

Easily present, edit and update your ASP.NET data.

Spread for Web Forms is a spreadsheet component that offers intuitive customer usability along with a wealth of grid functionality. With Spread for Web Forms you have exceptional client-side validation to alert your user of invalid data immediately and simple client-side keyboard navigation. Written from the ground up in C#, Spread for Web Forms will provide your user with an easy and reliable, feature-rich, user-friendly online experience.

Spread for Web Forms offers excellent design time support for rapid development using the innovative Spread Designer and supports in-cell editing and validation. It supports bound or unbound modes (no dataset needed), AJAX, native Microsoft Excel import/export, in-cell editing, multiple edits on multiple rows without server round trips, client-side column/row

resizing, multiple sheets, searching, filtering, multiple cell types, validations, cell spans, multiple headers, sorting, complete customization at the cell level, over 300 built-in calculation functions, hierarchical display and much more.

AJAX Support
AJAX allows the component to refresh without refreshing the entire page. This affects several features including expanding and collapsing child sheets in a hierarchical display, column sorting, inserting rows, searching, filtering, paging, and formulas.

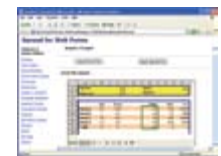

Grouping
You can set up the display to allow Outlook-style grouping of rows. For large amounts of data, this is helpful to display the data in the order the user needs. The user selects columns by which to sort and the component

Hierarchy
Display multiple levels of data.

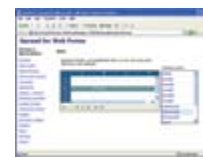

Formulas
Add calculations quickly to your Web applications by using any of over 200 predefined algorithms or add your own custom functions.

Import/Export
Import/export Microsoft Excel 97 and higher files and text files. Export to Spread XML.

Retrieving Data
Retrieve data from bound and unbound sources easily.

Skins
Use any of the 13 predefined skins or save and load your own design. Customized skins can easily be shared within your dev team.

Sorting
Automatically sort any column in ascending or descending order by double clicking on the header.

then organizes and displays the data in a hierarchy with rows organized accordingly.

Searching
You can search for data in any of the cells in the workbook by specifying the sheet and the string of data for which to search. You also have several searching options you can choose from.

Row Filtering
You can customize the user experience for filtering data on a sheet. With row filtering, you can allow the user to filter the data in columns on a sheet and display only the rows of data which meet criteria from a drop-down list or change the appearance of rows based on that filtering.

Frozen Rows and Columns
Using Internet Explorer 5.5 and higher, you can freeze columns and rows and

keep them displayed regardless of where the user navigates in the sheet. Frozen rows and frozen columns do not scroll when the user uses the scroll bar or navigation keys in the component.

"Load on Demand"
You can allow the Web page to load on demand - as the user scrolls further down the spreadsheet, the FarPoint Spread component on the client loads another page of rows from the server as needed. This is similar to what was called "virtual mode" in the COM version of the product.

Publish Excel Workbooks Online
You can easily publish your existing or new Microsoft Excel 97 and higher workbooks online by using Spread's Excel import and export feature.

IBM® Rational® Software

IBM Rational AppScan V7.0

Find where you're weakest before anyone else does.

- Scans and tests for all common Web application vulnerabilities - including those identified in the WASC threat classification, such as SQL-Injection, Cross-site Scripting and Buffer Overflow
- Integrates security into quality assurance testing for improved Web application development

IBM Rational AppScan

IBM Rational AppScan is a suite of automated Web application security solutions that scan and test for common Web application vulnerabilities.

Unlike other solutions that inundate users with vulnerability data, AppScan provides intelligent fix recommendations and advanced remediation capabilities, such as comprehensive task lists necessary to fix vulnerabilities uncovered during the scan and improve an organization's overall security posture. IT Security, development and QA will benefit from role-based reporting including more than 40 out-of-the-box security compliance reports, such as PCI Data Security Standard, ISO 17799 and ISO 27001, HIPAA, GLBA and Basel II.

IBM Rational AppScan automates Web application security testing by

scanning applications, identifying vulnerabilities and generating reports with intelligent fix recommendations to ease remediation.

IBM Rational AppScan Tester Edition integrates security into quality assurance testing for improved Web application development. It helps QA teams find and remediate security vulnerabilities while testing for functional and performance issues earlier in the application delivery process. AppScan expands test coverage beyond functional and performance testing and provides a single console, metrics and environment for QA teams to manage

Security Issues View
Provides information and access to the results of a scan. You can view results at a high level or select specific tests or objects.

Remediation Tasks View
Provides solutions designed to address security issues that were found in the scan security issues.

Application Data
After a full scan (Explore and Test), the results of the Application Data view will be updated.

Regulatory Compliance
The Regulatory Compliance Report lets you know if your application complies with regulations or legal standards.

Report Templates
The Template Based Report option lets you create reports in Microsoft Word.doc format, with exactly the data and layout you want.

Security Reports
Provides information about security issues discovered during scanning. There are templates for different audiences in your organization.

security and quality testing of Web applications.

AppScan automates security testing and execution as part of the normal QA run, eliminating the need for QA personnel to learn advanced or new security tools. It supports the ability to log security issues directly into your defect tracking tool and delivers real-time training on secure testing and coding techniques.

IBM Rational AppScan Tester Edition is a Web application security testing suite that scans and tests for all common Web application vulnerabilities - including those identified in the WASC threat classification, such as SQL-Injection, Cross-site Scripting and Buffer Overflow.

AppScan Tester Edition includes the QA Defect Logger enabling security testing

teams to continue to configure and run scans within AppScan with findings quickly and easily logged directly to the defect tracking tool.

Features and benefits include:

Automatic test creation, modification and maintenance capabilities to enable testing and remediation.

Simplified communication capabilities between development, QA and security teams to enable validation of fixes, identification of new bugs, measurement of success/progress and tracking of security defect changes.

Integration into existing testing environments to facilitate the automatic launching of scans or to enable the tracking and logging of defects.

Infragistics NetAdvantage®

Limitless Potential for Windows Forms, ASP.NET and WPF

Best User Interface Components Available

All the essential UI components for building and styling compelling line of business applications

Consistent User Experience

Build and style exceptional application interfaces with the same look and feel across multiple platforms

Rapid Application Development

Reduce development time and go to market faster with exceptional applications

Usability

Design UIs with the modern look and feel of the latest Microsoft® operating systems with little to no code

ROI

Focus on the business logic of the application and let NetAdvantage ensure consistency, styling and usability in the interface of all your applications, from the desktop to Web 2.0

Infragistics

NetAdvantage for .NET 2008 Volume 2

Create commercial class user interfaces for .NET applications.

- Includes ASP.NET and Windows Forms editions with full source code
- Export to Adobe PDF, Microsoft XPS or Microsoft Excel (XLS) from both Windows Forms and ASP.NET

NetAdvantage for .NET

Includes every essential User Interface control for Windows Forms and ASP.NET, plus application styling.

NetAdvantage for .NET is a presentation layer toolset for quickly and easily building and styling polished application UIs and delivering a great user experience, for Windows Forms, ASP.NET and Tablet PC. You can deliver user experiences consistent with Microsoft Office and Windows Vista, produce high performance Web applications and create hi-fidelity, cross-platform charts and gauges that instantly provide your audience with a clear understanding of key performance indicators. You can use the version of Visual Studio that's right for you whether it is Visual Studio 2005, or 2008, either choice enjoys full NetAdvantage

for .NET tools support. Designed with the user experience in mind, NetAdvantage for .NET user interface controls give you the ability to focus on business logic while it takes care of the presentation. Use the modern look and feel of Windows Vista styles and navigation or emulate the Office 2003 and Office 2007 user experiences with predefined color tables and ribbon controls. NetAdvantage for .NET has what you need to add no-touch AJAX to your Web site with a professionally polished UI. The product includes many Windows Forms and ASP.NET components: grids, charts, combos, desktop alerts, button calculator,

NetAdvantage for ASP.NET
Gauges and Chart controls let you create an executive dashboard.

NetAdvantage for Windows Forms
Create Outlook style applications with integrated NetAdvantage for Windows Forms controls.

Create applications with Office 2007 Ribbon styling
Also includes grids with conditional formatting, trees, 3D charts, menus, etc.

PDF Export
You can export reports to PDF document displaying Gauges to visually summarize data.

WebSchedule
Provides everything necessary for a full-featured scheduling Web application.

Application Styling for Windows Forms and ASP.NET
Same application different looks in an instant.

dropdown, progress bar, scroll bar, tooltips, editors, gauge, listbar, listview, toolbars and trees. NetAdvantage for .NET also includes a Document Export Engine for PDF and XPS formats and provides Web crawler optimization, AJAX support and SharePoint integration.

WinGrid (included in NetAdvantage for .NET) is a hierarchical data grid control with full support for bound and unbound data display. WinGrid supports complex data entry scenarios, custom layouts, rich printing and print preview, easy interop with Microsoft Excel and Adobe PDF file formats, and an almost unlimited array of look and feel options. WebSchedule (also included in NetAdvantage for .NET) provides

everything necessary for a full featured scheduling Web application including day, week, month and year calendar view. It includes a non-visual component that coordinates information between these views and the data provider. This extensible provider model permits your own data provider to adapt an existing data model to WebSchedule, or you can easily roll out with the predefined WebSchedule data model supplied in Microsoft Access and SQL Server form.

Included with every purchase of NetAdvantage for .NET, Infragistics provides support, source code for the controls and frameworks, three releases yearly of products and features and optionally priority phone, 24-hour chat and rapid response online support.

Infragistics® NetAdvantage and Dynamic Data

Infragistics NetAdvantage and Dynamic Data

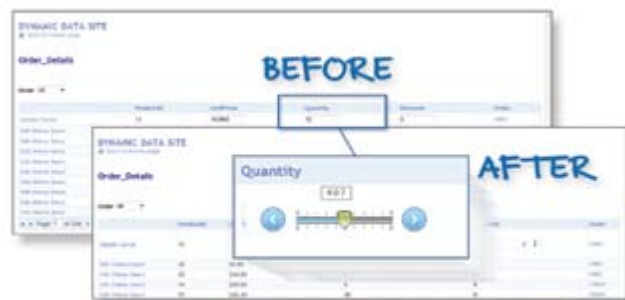

For those of you who keep a close watch on the off cycle ASP.NET projects that Microsoft has been working on, you're probably already familiar with Dynamic Data. With its scaffolding feature, Dynamic Data brings RAD to life.

What is Dynamic Data?

If you haven't seen dynamic data in action, head over to ASP.NET and take a look at the videos and other quick start materials. The basic concept behind Dynamic Data is that it will allow you to quickly put a front end on a Database structure. You might be saying - well, what about my business logic? Aren't single tier data applications bad? Dynamic Data is built on top of LINQ to SQL or the Entity Framework data model. And with these new age data models, comes better methods for validation, enforcing constraints, and the aspects of a multi-tier data model that you've come to expect.

How does Infragistics make Dynamic Data better?

Pictures are better than words, so take a look at the before and after shots. The before shot is a Dynamic Data website straight out-of-the-box. The after shot follows attaching Infragistics edit controls like the WebSlider™.

How do I use Infragistics With Dynamic Data?

After working with Dynamic Data for about 2 minutes, I'm sure this question has popped into your head. You get all of these cool editor controls in NetAdvantage for ASP.NET – so how can you use them with Dynamic Data?

It's all about FieldTemplates and UIHints. A UIHint is an attribute that you add to your code which tells the Dynamic Data framework which edit template to use for a given property of your data model. UIHints are added to properties defined in partial classes, preventing you from having to write lots of code. As an example, if you wanted to bind to Order and OrderDetails in the Northwind database, you would first create your DBML using LINQ to SQL classes. Then you would create a partial class for Order and another for OrderDetails. Now you simply add your attribute markers.

```
[MetadataType(typeof(OrderDetailsMetaData))]
public partial class Order_Detail
{
}

public partial class OrderDetailsMetaData
{
    [Range(0,1000)]
    [UIHint("IG_Integer_WebSlider")]
    public object Quantity;

    [Range(0,100)]
    [UIHint("IG_Decimal_WebPercent")]
    public object Discount;

    [UIHint("IG_Decimal_WebCurrency")]
    public object UnitPrice;
}
```

Example of the OrderDetails class

The UIHint attribute connects a property (i.e., Quantity) with an editor (i.e., the slider identified by IG_Integer_WebSlider). FieldTemplates are no more than fancy Web UserControls with some ASPX and a method or two. We set the WebSlider's Min/Max values to match the limits defined in the RangeAttribute, constraining the user's input to between 0 and 1000. Upgrading from simple textbox to intuitive slider was just that easy!

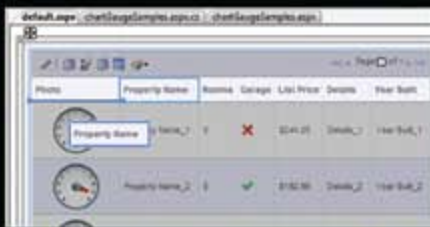

```
<ig:WebSlider
  ID="WebSlider1"
  runat="server"
  ValueAsString="<%= Convert.ToDouble(FieldValueEditString) %>"
  LargeChangeAsString="10.00" ShowPlusMinusButtons="True"
  ValueType="Int" Width="200px">
  <ValueLabel Location="FloatTopOrLeft" />
</ig:WebSlider>
```

WebSlider example - ASPX and C# are shown

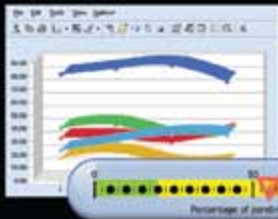

For more information and full source code, you can visit the Infragistics Dynamic Data project at www.codeplex.com/igdynamicdata

Software FX

Grid FX V1.0

Next generation data presentation and visualization functionality.

- Features in-place WYSIWYG template editing plus Smart Tag Wizards
- Includes Chart FX features for charts, digital panels and gauges
- Provides AJAX grouping, sorting, filtering, paging and data editing

Grid FX

Enterprise-quality grid solution for next-generation Web applications.

Grid FX is a highly integrated data visualization platform to display graphical and tabular data in enterprise applications. Grid FX features include AJAX, WYSIWYG editing, Auto Format Wizard, advanced grouping, sorting and filtering, drag and drop editing, Smart Tag Wizards and many more. Grid FX provides Chart FX functionality right in the box providing immediate charts, digital panels and gauges and can also be combined with other Chart FX products to provide additional data visualization needs.

Grid FX offers in place WYSIWYG template editing and context-sensitive Smart Tag Wizards that expose common functionality. Developers can click and drag right on the design surface

or access Smart Tags where most functionality is readily available in a graphical way rather than a simple list of properties.

Motifs

Found within Grid FX Auto Format Wizard, Motifs are an effective way to quickly apply visuals to your grid. Rather than customizing individual grid elements, Grid FX has pre-built professionally designed Motifs for virtually every major application, like Microsoft Office, Outlook, Sharepoint, Windows Vista, Dynamics CRM plus other popular formats such as Gmail, Yahoo and iTunes among others. These motifs not only change colors but also apply fonts, column and row effects and even change the characteristics of

Card view layouts
An easy way to template and present data and provide you with more complex views than standard row and column layout.

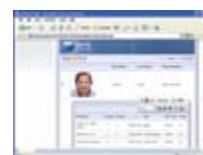

Integrated Chart FX Technology
Grid FX includes Chart FX capabilities right in-the-box, offering immediate charts, digital panels and gauges.

Grid FX End User Experience
FloatingBar provides end-users with per item features including data copying, grouping, sorting, filtering plus hiding or showing columns.

AJAX Data Organization
AJAX is utilized in every possible facet of Grid FX to minimize server calls and redraw while creating a better experience for the end-user.

Grid FX Master Detail
Display additional information for an item through AJAX-enabled expandable areas including collapsible rows and Sidebars.

Grid FX Smart Tag Wizards
Grid FX expands on the Visual Studio concept of Smart Tag Wizards by implementing full blown, context-sensitive wizards.

buttons and other navigation controls to match the grid's parent container or the application visuals. In addition, there are also palettes available to change virtually every grid color with a single mouse click.

Drag and Drop Editing

Grid FX allows the developer to intuitively grab, drag and rearrange grid elements right on the design surface. Gone are the days of working through abstract modal dialogs for design-time customization.

Smart Tag Wizards

Grid FX expands on the Visual Studio concept of Smart Tag Wizards by implementing full blown, context-sensitive wizards where the most important functionality is readily available in an intuitive, graphical method.

In-Place Template Editing

Grid FX improves the template editing experience. Instead of the control being hidden and entering "template mode", Grid FX supports in-place WYSIWYG template editing, allowing a more natural method of grid manipulation.

FloatingBar

The Grid FX FloatingBar appears in an elegant and usable manner when the user hovers over an editable area. Properties are presented to allow the customization of aesthetic as well as functional aspects of the grid.

Data Editing

With Grid FX, end-users can easily insert, update and delete data using either in-place data editing or customizable modal dialog data editing. Either option allows for an intuitive method of end-user manipulation of data.

Telerik

Telerik RadControls for ASP.NET AJAX + WinForms + Telerik Reporting Q1 2008

Build rich Web/desktop user interfaces and design reports.

- Deliver feature-rich, standards-compliant Web applications
- Add WPF-like visual effects using Windows Forms controls
- Easily generate Windows, Web and PDF reports

Telerik RadControls for ASP.NET AJAX + WinForms + Telerik Reporting

This comprehensive toolset allows you to rapidly build commercial-grade interfaces for Web and desktop applications and meet the diverse functional, design and usability requirements of your clients.

Telerik RadControls for ASP.NET + WinForms + Telerik Reporting includes over 50 ASP.NET AJAX components, robust WinForms controls with WPF-like visual effects, and a flexible reporting engine that helps you quickly create .NET applications on budget and on time. From Office 2007 UIs to highly interactive AJAX UIs, you can quickly create amazing .NET applications that meet the diverse functional, design and usability requirements of your clients

What's included (ASP.NET AJAX):
 RadInput - highly customizable component for controlled data input (masked textbox and date input),
 RadCalendar - lightweight calendar control with native AJAX support, multi-view mode, previous/next month and preview panes, RadUpload - AJAX-enabled multi-file upload control

which uses a proprietary HttpModule to minimize server memory usage, RadToolBar - flexible component for implementation of tool-strips found in most Web applications, RadGrid - designed to eliminate the typical tradeoff associated with ASP.NET grid controls rich functionality at the expense of weight and performance, RadComboBox - a component for building drop-down interfaces, RadEditor - a WYSIWYG rich-text editor that can replace any TextBox with an intuitive Word-like editor, RadPanelbar - a versatile component for building collapsible side-menu systems. It was developed to facilitate the typical left/right-side navigation, but cannot be achieved using dropdown menu components. Plus many more ASP.NET AJAX components.

RadControls for ASP.NET AJAX
 Telerik RadControls for ASP.NET AJAX is an innovative and comprehensive toolset for professional Web development.

Navigation Controls
 Highly efficient semantic rendering mechanism results in considerably reduced HTML output.

RadEditor for ASP.NET AJAX
 A fast WYSIWYG Web editor, designed upon ASP.NET AJAX, utilizing its client-side framework and programming model.

RadScheduler
 Lightweight scheduling component blending rich Outlook*-style functionality with usability enhancements.

RadGrid for ASP.NET AJAX
 A fast client-rich Datagrid for ASP.NET, designed to provide desktop-like user experience with minimum HTML footprint.

WYSIWYG Report Designer
 Telerik Reporting introduces an innovative WYSIWYG design surface in Visual Studio .NET.

What's included (WinForms):
 RadDock - full-featured Visual Studio 2005-like docking system, RadChart - a lightweight, easy-to-use data presentation component that offers support for all popular chart types, RadGridView - outlook style grouping, filtering, sorting and column reordering, RadCalendar - a lightweight yet highly advanced date input control, RadRibbonBar - provides an easy-to-design implementation of the Microsoft Office 2007 "ribbon" user interface, RadTreeView - facilitates the display, management, and navigation of hierarchical data structures. Plus many more Windows Forms components.

Telerik Reporting is designed for developers who need a flexible, solid, royalty-free solution to easily design a wide range of reports. The product offers a convenient object model and solid Visual Studio 2005/2008 integration which simplifies the generation of Win, Web and PDF reports.

For complete control over viewing reports, Telerik Reporting offers Windows Forms and Web Viewers, which guarantees that you will always get the same look and feel of your reports. Both viewers are also available within VS2005 with individual design time support.

Telerik RadControls for ASP.NET + WinForms + Telerik Reporting also includes comprehensive learning resources with more than 600 demos, 500+ pages of courseware materials and documentation - all available to advance your learning. Email and online technical support is provided by Microsoft Certified professionals to ensure the success of your projects.

The Subscription License comes with a Gold Support Package (up to 24h response time), full C# source code, redistribution rights and free updates for the latest products for 1 year.

Acesso Software (was Macrovision)

InstallShield Professional 2009

Create high-quality Windows Installer, server and mobile installations.

InstallShield

Welcome Assistant
InstallShield includes a helpful welcome assistant to get you up and running quickly.

Application Information
The Application Information page requests general information about your application.

Installation Architecture
You can customize your Installation Architecture by configuring the features that are included in your installation.

- Minimize the need for reboots with the Restart Manager infrastructure
- User Account Control (UAC) support and digital signature enhancements provide improved security for software installation

InstallShield allows you to create flexible installations quickly and easily across all Windows operating systems. First-time developers find it easy to create installations, while power users find its depth and flexibility perfect for developing complex software installations. InstallShield includes support for UAC, Restart Manager, Windows Vista validation testing,

Windows Installer 4.0, expanded digital signing capabilities and more.

The InstallShield IDE, automated wizards, templates and pre-built objects saves you significant time and effort. The Project Assistant walks you through the setup building process, increasing your efficiency while helping you avoid errors.

Actipro Software

Actipro WPF Studio V3.5

A suite of user interface components for Windows Presentation Foundation (WPF).

Actipro WPF Studio

Office 2007 Style Ribbon
A feature-rich ribbon control suite that meets all Microsoft licensing requirements.

Wizard Dialogs
Easily create Wizard dialogs with animated page transitions and total control over navigation options.

Bar Code Generation
Add vector-based bar codes to any WPF application or XPS document, using the most common symbologies.

- Includes all Actipro Software WPF components
- Currently includes: Ribbon, Bar Code, Navigation, Wizard and WPF Shared Library
- Runtime Royalty Free

Actipro WPF Studio includes all WPF components produced by Actipro Software including: Actipro Ribbon (Office 2007-like user interface), Actipro Wizard (wizard dialogs), Actipro Bar Code (bar code generation), Actipro Navigation (Office 2007-like navigation bar, a Windows Explorer-like explorer bar and breadcrumb control, and more) and the Actipro Shared Library (many useful components and miscellaneous controls).

All included products are written 100% in C#, are compatible with XAML and can be used in XBAPs. They also all have extensive Visual Studio 2008 designer functionality.

Actipro WPF Studio licensees enjoy one year of free upgrades to any new WPF product versions and also any new WPF component products introduced.

Source Code is available and it is Runtime Royalty Free.

Bulletproof Deployment Solution

Dramatically reduce your application deployment costs while increasing overall corporate productivity

InstallShield®

Create Powerful and Flexible Installations Quickly and Easily across All Windows Operating Systems.

Build a better product with the confidence that comes from using the latest tools. InstallShield lets you:

- Stay current with support for the latest Microsoft technologies—Windows® Vista, .NET 3.0, Visual Studio 2005, SQL Server 2005, and more
- Optimize your installations for Windows Vista with support for UAC, Restart Manager, Certified for Windows Vista validation testing, Windows Installer 4.0, digital signatures, and more
- Maximize team efficiencies with support for **InstallShield Collaboration**—a plug-in for Visual Studio

InstallAnywhere™

Create One Installation for Multiple Platforms and Languages

InstallAnywhere delivers the ideal combination of ease-of-use and powerful functionality to create professional multiplatform installations. InstallAnywhere offers full support for the broadest range of target systems and new capabilities for team development and accessible Section 508-compliant installations.

- Extensive platform support—Mac OS X, Linux, Windows, AMD-64 and more
- Simplified and standardized software deployment
- Support for **InstallAnywhere Collaboration**—an add-on tool for Eclipse that lets you maximize team efficiencies

AdminStudio®

How Enterprises Prepare Reliable Software Packages for Deployment

AdminStudio makes it easy for IT to prepare reliable software packages and virtual applications for error-free deployment. It combines powerful software packaging technology with Web-based process management tools that help you cut packaging time by 70%.

- Easily migrate software to Windows XP and Windows Vista
- Improve deployment success rates to 99% – and better
- Reduce your IT costs and improve application reliability
- Manage the entire packaging process with Acesso Software's **Workflow Manager** (sold separately)

Actipro SyntaxEditor for WinForms

The ultimate syntax-highlighting editor control for .NET

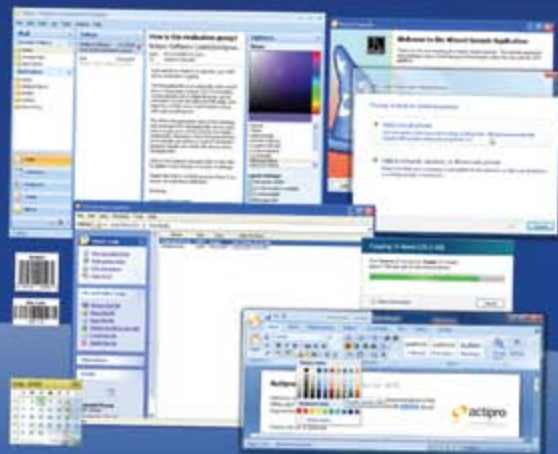

- ◆ Mimics the Visual Studio code editor
 - ◆ Create custom language definitions
 - ◆ Code outlining and word wrap
 - ◆ Indicators (breakpoints, squiggle lines)
 - ◆ IntelliPrompt member lists, code snippets, parameter & quick info tips
 - ◆ Over 100 stock editing commands
- Optional .NET Languages Add-on**
- ◆ Advanced C# / Visual Basic languages
 - ◆ Automated IntelliPrompt based on live source code editing & assemblies
 - ◆ Document outlining (over 100 AST nodes), XML comment auto-complete
- Optional Web Languages Add-on**
- ◆ Advanced XML language
 - ◆ XSD-based IntelliPrompt/validation

Actipro WPF Studio

Jumpstart your WPF application's UI with over 45 controls

- ◆ Bundled suite includes all Actipro WPF controls at one low price
- ◆ Office 2007 style ribbon UI
- ◆ Galleries, color pickers, breadcrumbs
- ◆ Date/time pickers, calendars
- ◆ Wizards, navigation/explorer bars
- ◆ Animated transitions, bar codes
- ◆ 1 year of support & free upgrades

Aspose

Aspose.Words V5.1.0

Read, modify and write Word documents without utilizing Microsoft Word.

Aspose.Words

Mail Merge

You can create a letter for a list of clients defined in a database. This is similar to the mail merge function in Microsoft Word.

Tables

You can populate a table in a document with information from a database, including images stored in BLOB fields.

Sales Invoice

You can merge data from multiple tables and format date and numeric fields. In this case to create a sales invoice.

- Features include document creation, content/formatting manipulation, powerful mail merge abilities and export to DOC and HTML
- Provides detailed programmatic access to all document elements

Aspose.Words supports a wide array of features including document creation, content and formatting manipulation, powerful mail merge abilities, exporting to DOC, HTML and PDF (requires Aspose.Pdf).

Aspose.Words Application Programming Interface (API) is powerful yet easy to use. To minimize

your learning curve, classes, properties and method names borrow the best practices from two well known APIs: Microsoft Word Object Model and System.Xml. High-level reporting and document building functionality is provided as well as detailed programmatic access to all document elements.

Top 250: Rank in Top 250 Best Selling product list. Review: Five star customer rating from our Web site.

Contour Components

ContourCube V3.0.5

Interactive reporting, data analysis and reports distribution.

ContourCube

Embedded business functions
A rich library of business functions and statistical algorithms is included like trends, time variance, weighted averages.

Wrapping long strings
Text wrapping mode makes reports more visible and valuable for users who work with reports containing long strings

Dynamic captions and filter area wrapping
Shows the selected value, so filters behave just like dropdown lists.

- Comprises many popular business and statistical algorithms
- Supports fast direct data loading from multiple sources
- Includes XP, Classic and Flat appearance styles with text wrapping

ContourCube is a high-performance OLAP component for rapid development of Internet, client-server and desktop business intelligence applications. It provides a highly dynamic interface for interactive data analysis, sophisticated analytical, statistical, reporting and graphing features. ContourCube can get data from any data source via ADO, BDE, ODBC or an unbound data source; just drop it onto a form within your project, link it to your data and get the benefits of OLAP. ContourCube performs OLAP operations on hundreds of thousands

of records without an OLAP server. It allows end users to perform OLAP and statistical analyses using current data from any relational database. You can build and print reports interactively simply with a click and drag & drop (with sub-second response times), dynamically interact with data: move rows and columns, filter data, drill-down, roll-up, pivot table and get all possible reports from one dataset. ContourCube will make millions of calculations simultaneously and show new subtotals and totals instantly.

Finds where you're
weakest before
anyone else does.

Protect your applications with a complete, affordable and adaptable security solution for your business.

In today's business world, companies rely on an increasing number of web applications to collect and exchange sensitive data. More applications mean more places where you're vulnerable and knowing where your weaknesses are can be like finding a needle in a haystack. Unless you have IBM Appscan.

IBM Appscan is an automated solution that tests your web application security and then pinpoints your vulnerabilities. It can also help you manage the process of fixing them. With the threat of hackers always growing, IBM Appscan is designed to readily adapt to these ever-changing dangers - so you can be confident that you're totally secure and completely compliant.

IBM Appscan forms part of the IBM Rational range, which can provide you with complete, end-to-end lifecycle development solutions for all of your software. It makes your life easier and the development process run smoother than ever.

Protect your business. Don't let others find your weakness first.

Provides cross-browser interactive image panning and zooming without plug-ins!

powerSNMP for ActiveX and .NET

Controls that put the "simple" back into Simple Network Management Protocol.

powerSNMP for .NET

Create custom SNMP Manager, Trap and Agent applications with a set of native .NET classes. Full support for SNMPv1, SNMPv2, SNMPv3 and ASN.1 standards. Compatible with all .NET Framework versions 1.0, 1.1 and 2.0.

powerSNMP for ActiveX

Create custom SNMP Manager, Trap and Agent applications for monitoring and controlling network devices. Full support for SNMPv1, SNMPv2 and ASN.1 standards.

Enterprise licenses including source code now available.

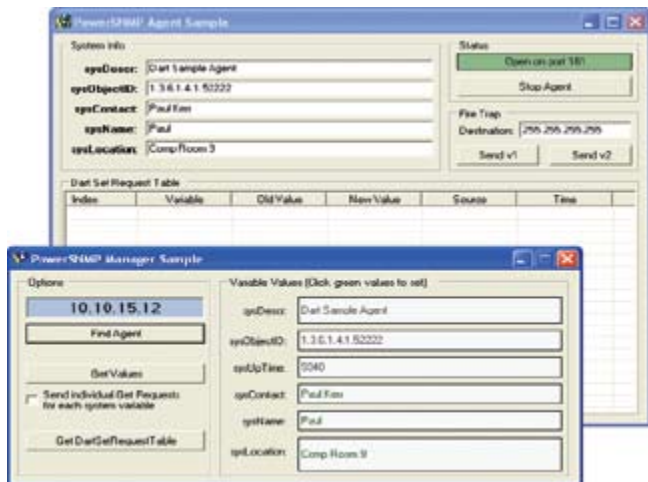

To learn more about all of Dart's products or to download a free evaluation, visit www.componentsource.com or call 888.850.9911

Dart Communications

PowerSNMP for .NET V1.0

Manage, monitor and control network devices from your .NET applications.

PowerSNMP for .NET

- Agent**
You can create an application with common SNMP agent functions such as responding to SNMP queries.
- Generate MIB Classes**
You can generate class code for MIBs. This functionality is also built into the Manager and Agent components.
- Trap Catching**
PowerSNMP.NET lets you receive, trap and notify (version 2 and 3 trap) messages.

- Messages can be constructed using no security, authentication only, or authentication and privacy with SNMPv3
- A MIB compiler dynamically loads MIB files at runtime

PowerSNMP for .NET is a family of .NET classes and components used to manage network devices and remote management information.

Full support for SNMPv1, SNMPv2, SNMPv3 and ASN.1 standards provide interoperability with enterprise devices. The Manager and Agent components provide for message

transport and a suite of supporting classes provide MIB information, encoding/decoding, and encryption/decryption. MIB files can be parsed and imported into C# and Visual Basic projects to provide full intellisense support. A MIB compiler dynamically loads MIB files at runtime to generate new classes and objects on demand.

Desaware

Desaware Universal .NET

All of Desaware's .NET components, with full source code.

Desaware Universal .NET

- Control and Configure Services**
Use control panel applets to control or configure services.
- State Machine Operations**
A state machine can be deployed to perform a series of asynchronous operations.
- NT Service Creation**
Create NT services and control them via the Windows services control panel.

- All products now fully compatible with Windows Vista
- NEW SpyWorks V8.0 features improved handling of Windows hooks, particularly with regard to recovery from application crashes

Desaware's Universal .NET is a comprehensive suite of components for .NET solution providers which also contains the source code for the nine individual products included: SpyWorks Professional; StateCoder; NT Service Toolkit .NET; StorageTools; Event Log Toolkit; OneTimeDownload-5M; LineGraph-5M; INIFileTool-5M and File Property Component.

In addition to the products themselves, the source code for each of the individual products is included in the Desaware Universal .NET at no additional cost.

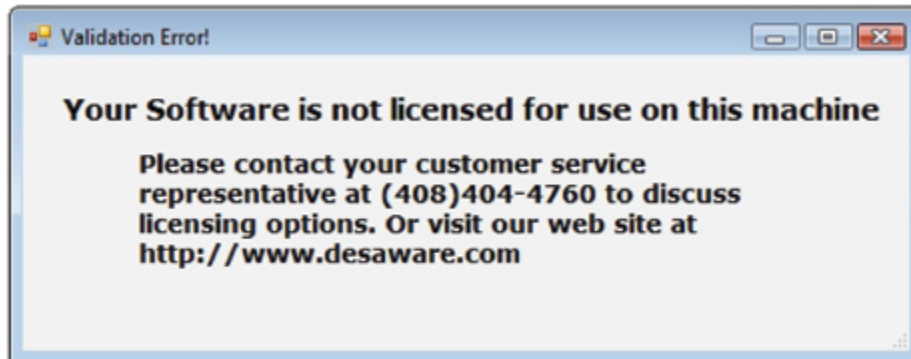

9 products, 41 individual controls and libraries, and 780,000 lines of code.

Thousands of people use your software. (Hundreds bought it) Licensing should not be an afterthought.

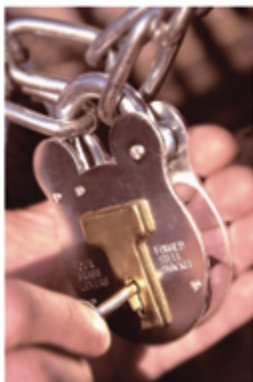

We hear it everyday. The caller has completed the project, and it's almost ready to ship - but wait, what about licensing?

The Desaware Licensing System is flexible enough for almost any application. From standalone Windows applications, Windows and web services, to web applications - even class libraries, the DLS is up to the task. Ideal for distributing software, or securing your enterprise software.

Desaware Licensing System

Supports .NET 3.x and Vista

Download your 30 day trial version today. Includes complete documentation and examples at www.desaware.com.

- License unlimited applications: no hidden costs or fees.
- Includes activation server and management tools.
- Use the standard .NET component licensing framework or bypass it completely.
- Cryptographic based licensing - no secrets to discover.
- Implement tight activation based security or less stringent security scenarios.

Coming Soon for Windows Mobile

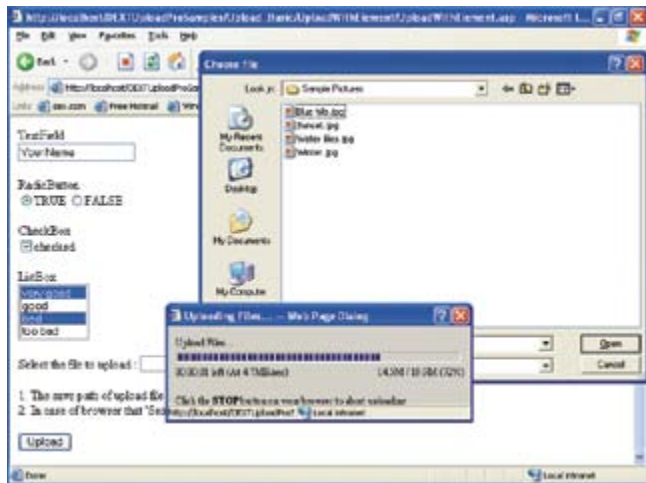

- Support for Windows Mobile 5 and later.
- All the features of our standard licensing system.
- Single server supports both standard application and mobile applications.

Desaware Inc.

DEVPIA

DEXTUpload Pro V3.2.1

Add the ability to upload files to your Web applications.

DEXTUpload Pro

Single and Multiple Uploads
DEXTUpload.NET allows you to upload single and multiple files.

Upload Progress
You can display a custom progress bar during the upload process.

Watermarking and Image Format
DEXTUpload.NET allows you to upload and watermark images and change image formats.

- Upload files (2Gb max) to any Web server from your Web browser
- Includes real time server-side Graphical Progress Indicator
- Stable - over 5,000 Internet sites use DEXTUpload worldwide

DEXTUpload Professional is an Active Server Component enabling you to upload files to Microsoft Internet Information Server from a Web browser. It conforms to the internet standard RFC 1867 and can be used in Microsoft Active Server Pages. Uploading mass storage files is easy with DEXTUpload providing rapid upload speeds and low resource occupancy. Users can check and monitor the upload progress in real time with a Server-side graphical progress indicator.

DEXTUpload Professional is a useful

upload component for those who want to upload files to their Web servers. If you are operating a Web mailing service, Web forum, Web hard disk or Web photo shop, then DEXTUpload Professional is ideally suited to you.

DEXTUpload's uploading function lets you upload 2GB files, rewrite uploaded files etc. The downloading function allows downloads to continue from session to session and the image processing function allows users to watermark uploaded images and do basic image processing without the need for other imaging components.

Dundas Software

Dundas Chart for Reporting Services V2.2

Enhance your reports in SQL Reporting Services.

Dundas Chart for Reporting Services

Visual Appearance
Every chart area can be customized to suit your needs.

Enhanced Formula Support
You can quickly and easily create sophisticated financial and statistical charts.

Custom Labels
Apply custom angles, fonts and colors to labels to achieve added levels of customization to charts.

- Chart types include 2D and 3D line, Spline, step line, bar, stacked bar, area, pie, range, polar, Gantt, funnel, etc.
- Scripting ability lets you write C# or VB.NET code against the charts object model

Dundas Chart for Reporting Services is based the Dundas Chart for .NET engine, it gives IT professionals working with Reporting Services access to an arsenal of new features and chart types. You can instantly enhance reports with advanced charting visualizations, analysis capabilities and more.

Dundas Chart for Reporting Services is also very easy to incorporate into reports and easy to use. Like any other reporting control, it is integrated directly within the Visual Studio Toolbox, side by side with the native controls. It has interfaces that are familiar and easy to navigate to make the learning curve very minimal.

Janus WinForms Controls Suite

Add powerful Outlook style interfaces to your applications

Janus GridEX for .NET

Janus GridEX is a control capable of working in bound fashion with ADO.NET or IList data sources. The control supports hierarchical display of data and permits you to create effective user interfaces similar to Microsoft Outlook®, while easing development and maintenance time. The functionality provided by the control allows you to display, format, edit, sort, group, filter, manipulate, summarize, preview and print your data. Standalone MaskEdit, MultiColumn Combo, and UpDown controls are also included.

Janus Ribbon & Command Manager Controls

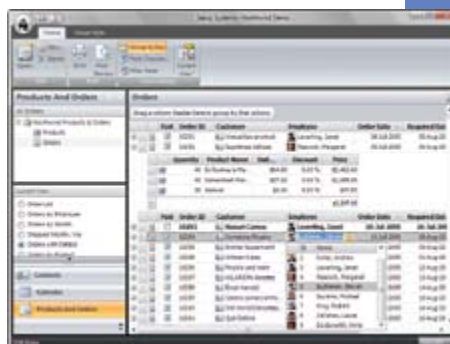

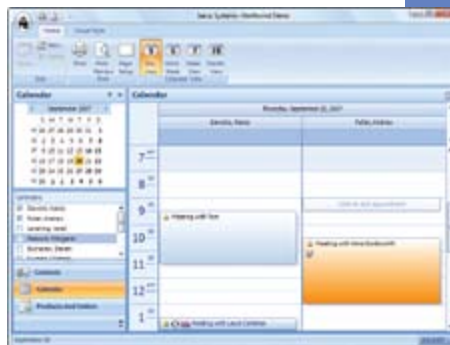

Janus Command Manager and new Ribbon controls are also included in the suite. These controls provide Windows developers with stylish menus and toolbars. The components permit advanced customization of the menus and toolbars of your applications. Use the built in VisualStyles in the controls to easily provide your applications with a look similar to Windows XP, Office 2000, Office XP, Office 2003 or 2007.

Janus Timeline Control for .NET

The Janus Timeline Control is ideal for displaying items in relation to time. Items in the control are arranged in chronological order from left to right on a time scale that can be divided from seconds to years. You can easily load, display, format, group, filter, edit and manipulate items with the functionality available in the control in both bound and unbound modes.

Janus Schedule for .NET

The Janus Schedule control can present appointments and related owners in different Views, representing Days, WorkWeeks, Weeks, and Months. The control also supports working with recurrent appointments. You can easily load, display, format, filter, edit, manipulate, preview, and print appointments with the functionality available in the control in both bound and unbound modes. A stand-alone Janus Calendar Combo Control, used to edit date and time values, is also included.

Windows Forms Controls

A suite of controls designed to provide powerful user interfaces for Microsoft .NET Smart Client applications patterned after Microsoft Outlook®. All of the controls in the suite are 100% C# managed controls designed to be used with Visual Studio® 2005.

Janus WinForms Controls Suite includes the following controls:

Janus GridEx for .NET
(Outlook Grid)

Janus Schedule for .NET
(Outlook Calendar View)

Janus Timeline for .NET
(Outlook Journal)

Janus ButtonBar for .NET
(Outlook Shortcut Bar)

Janus ExplorerBar for .NET
(Outlook Shortcut Bar)

Janus UI CommandManager
(Menus and Toolbars)

Janus PanelManager
(Outlook / Visual Studio .NET panes)

Janus TabControl
(Tab Control)

NEW!

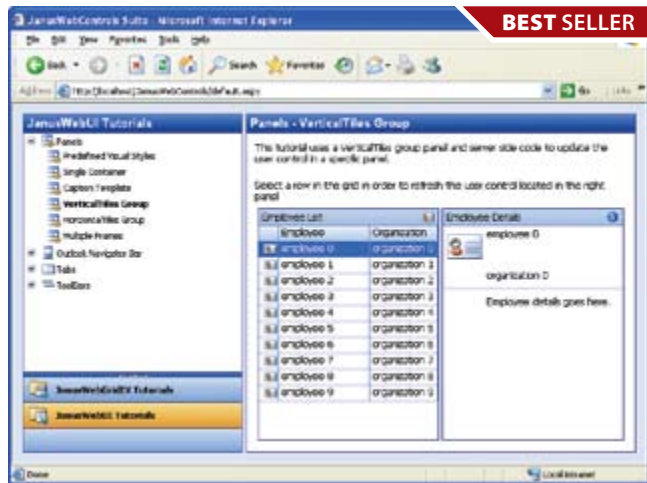

All controls now feature Office 2007 look & feel plus Ribbon Bar

Download a free trial or buy now at
www.componentsource.com

Janus Systems

Janus Web ASPNET Server Controls Suite V3.0

Add Outlook style interfaces to your .NET Web applications.

Janus Web ASPNET Server Controls Suite

Janus Web UIPanelManager
Deliver appealing layouts for your ASPNET applications by using panes that can be arranged in horizontal or vertical tiles.

Outlook Navigation Bar
Advanced navigation panes like Outlook Navigator Bars or Tab Strips are also provided by the Janus Web UIPanelManager.

Janus Web UICommandManager
Provides basic toolbar functionality for your ASPNET applications with a look similar to Microsoft Office.

- Janus Web GridEX Control provides an Outlook style UI for the Web
- Provides Office style toolbars and pane based layouts
- Now supports Microsoft ASP.NET AJAX Framework

Janus Web ASP.NET Server Controls Suite is a comprehensive toolkit of controls designed to provide a rich user interface to your ASP.NET applications.

It includes Janus Web GridEX, Janus Web UIPanelManager for creating professional layouts, Janus UICallbackManager, Janus Web UICommandManager and more.

The main component is Janus Web GridEX for .NET which is a 100% C#

managed ASP.NET control. It is a data-aware, fully editable component that can be bound to any table in a dataset, result set or to any other data source that supports IEnumerable interfaces. The control offers many advanced formatting features that will give the programmer total control over how data is displayed.

Janus Web ASP.NET Server Controls now offers support to the new Microsoft ASP.NET AJAX Framework.

LEAD Technologies

LEADTOOLS Document Imaging V15.0

Build powerful document imaging into your applications.

LEADTOOLS Document Imaging

Annotation Stamps
Stamp documents to indicate status.

Hot Spot marking
Add freehand or stamped hot spot regions.

Clickable Events
Add buttons to the document, which trigger events (e.g. play .wav files).

- Features include image processing, scanning, color conversion, display, compression, multi-format import/export, printing and database imaging
- Now features improved performance, 64-bit support and more

LEADTOOLS Document Imaging includes API, C++ Class Libraries and .NET Class Libraries for Win32 and x64 with features that include comprehensive annotations (Text, highlights, sticky notes, stamps, and more), specialized bitonal image display and processing such as scale-to-gray and favor-black. It also features performance and memory

optimizations for bitonal images, document image clean-up including hole-punch, border, noise, bump, inverted text, line and staple detection and removal and scanning with TWAIN or ISIS.

Now includes JBIG2, ABIC, JPEG2000 and LEAD CMW.

LEADTOOLS

Powerful Imaging Development SDKs

LEADTOOLS v.15 – WPF, AJAX, .NET, API, COM and more...

Develop your application with the same time-tested and robust imaging code used by Fortune 1000 companies such as Microsoft, HP, Kodak, Corel, GE, Canon, Ford and CitiCorp. LEADTOOLS provides developers easy access to decades of expertise in developing color, grayscale, document, medical, vector and multimedia imaging code. Install LEADTOOLS to eliminate months of research and development time while maintaining high levels of quality, performance and functionality.

- WPF (XAML) controls: Viewer, Image List and more
- AJAX Web Form Image controls
- WIC enabled codecs: automatic integration with WPF/WIC applications
- Image formats: 150+ including TIFF, HD Photo, JPEG, JPEG2000, PDF, XPS, DWG and more
- Display controls: scroll, zoom, pan, brightness, window level
- WIA scanning: supports 32 and 64 bit drivers
- TWAIN scanning: auto-detect optimum driver settings for fastest scanning
- Image processing: 200+ filters, transforms and color conversion functions
- Document cleanup/preprocessing: deskew, despeckle, registration and more
- OCR / ICR / OMR: most accurate recognition with formatted output (PDF, DOC, TXT and more)
- Barcode: read and print 1D/2D (DataBar/RSS, UCC/EAN, DataMatrix, QR, PDF and more)
- Bitonal compression: JBIG, JBIG2, LEAD ABC, CCITT G4 and more
- Annotations: Interactive UI for mark-up objects including shapes, text, measurement, security, multimedia and more
- Grayscale imaging: display and process signed/unsigned 12-16 bit, 32 bit data
- DICOM: All IOD classes and modalities (CR, CT, MR, NM, US, RF, SC, VL and more)
- DICOM communications: high/low-level functions for all service classes
- Multimedia: capture, play, stream and convert DVD, MPEG, AVI, WMV, MP4, MP3, OGG, ISO and more
- DVD: creation and burn
- PDF: read/write with MRC compression

Syncfusion

Syncfusion Essential Studio Enterprise 2008

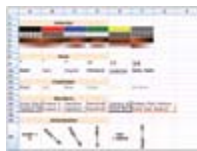

Accelerate WinForms and ASP.NET development with 150+ components.

Syncfusion Essential Studio

Outlook 2007 UI
Create applications with the latest UI patterns and paradigms in both Windows Forms and ASP.NET.

Essential Grid
Features Excel like grid functionality implemented using a style based architecture.

Word 2007 UI
Windows Forms Application recreating the Office 2007 look and feel using the Ribbon controls.

- Includes grids, docking, charting, diagramming, PDF & Office reporting and scheduling with a solid architecture
- 1 year of support and updates; no royalties, runtimes, or server fees

Syncfusion Essential Studio includes Syncfusion Essential Tools, Essential Grid, Essential Grouping, Essential XlsIO, Essential Diagram, Essential Chart and Essential Edit. It incorporates a unique debugging support system that allows switching between 'Debug' and 'Release' versions of the libraries with a single click from inside the Visual Studio.NET IDE. Dynamic and

feature-rich, Syncfusion Essential Studio is everything developers need to create Enterprise-class applications.

Also included is Essential TestStudio, which enables automated testing of Syncfusion controls using Mercury Quick Test Professional. Syncfusion Essential Studio comes with 1 year of support and updates.

The Imaging Source

TX Text Control .NET Server V14.0

Generate word processor documents on an HTTP server.

TX Text Control .NET Server

XML Programming
TX Text Control XML mode enables non-technical end-users to create valid XML documents.

Mail Merge
You can merge database content into a template document.

Multi-Language Support
TX Text Control is shipped with dialog boxes that are translated into English, German, French, Spanish and Italian.

- Create press-ready, password secured, encrypted Adobe PDF files
- Include complex nested tables, headers, footers and images
- Supports XML, PDF, CSS, RTF, HTML, DOC, ANSI, Unicode and more

TX Text Control .NET Server is a server side component that can be deployed on Microsoft Internet Information Server. It is a fully programmable ASP.NET word processor engine that offers an extensive palette of word processing features.

end user applications that generate documents on-the-fly, using data from databases, binary files (Microsoft Word), ASCII files (XML, RTF, HTML) and image data (JPG, PNG, BMP, TIF, GIF, WMF).

Using TX Text Control .NET Server, programmers can develop server side,

Output is sent to an HTTP stream or to a file, without displaying anything on the server monitor.

Abstraction Systems

ToolTipsFactory for .NET V1.2

Advanced, single/multi-line text, image and animated image tooltips.

- Includes 4 types of tooltip controls; SingleLine, MultiLine, Image and Animation
- All layout elements are fully customizable in code or through Visual Studio

ToolTipsFactory for .NET

ToolTipsFactory for .NET is a set of components designed to add visually and functionally sophisticated ToolTips to Windows Forms applications. These components give application developers the possibility to add really dynamic tooltips to their applications, with single or multi-line text, images or even animations as content. They also give programmers full control over size and layout of the ToolTip's background, border and behavior.

If you are creating multi-line tooltips the number of lines is only limited by

the size of the selected font and the vertical screen resolution. If you prefer images in your tooltip, ToolTips Factory for .NET provides icons, photographs, dynamically created drawings etc. The images can be assigned at design time in Visual Studio .NET, loaded or dynamically created at runtime by the application.

ToolTipsFactory for .NET is 100% managed code and includes full Visual Studio integration and developer support. Plus it can also be integrated with other third party .NET controls.

AG-TECH

Btrieve Classes for .NET V2.0

Fast, easy to program access to Pervasive.SQL databases from .NET.

- Provides direct access to Pervasive's transactional interface from within .NET
- Extended class enables maximum performance when searching Pervasive data

Btrieve Classes for .NET

Btrieve Classes for .NET is a set of .NET database access support classes that enable fast, easy to program access from .NET programs to Pervasive.SQL databases via the Btrieve API. As such they greatly help developers looking to write .NET programs accessing data in Pervasive.SQL databases or those looking to migrate existing pre-.NET Btrieve/Pervasive applications to .NET.

Btrieve Classes for .NET performs with greater efficiency and hence is faster than ADO.NET or Pervasive's OLE DB provider.

This product includes two types of class library the first (DDF Class) is specifically designed for the .NET Framework and is composed of classes that enable smart and efficient access to column data and definition of data type conversion code. The second type of class (Native Class) provides Btrieve API level access from .NET managed code.

Btrieve Classes for .NET includes full support for Pervasive PSQL v9 and Visual Studio 2005.

Aurigma

Graphics Mill for .NET V5.0

Add advanced Image processing to your .NET applications.

- Load/save images from/to files, apply different transformations and effects, draw lines, curves, shapes and text.
- Includes Windows Forms and Web Form controls.

Graphics Mill for .NET

Graphics Mill for .NET can be used to create photo hosting Websites, applications which apply preprint preparation to images, scripts which generate Web graphics, or any other advanced imaging application you might need. It includes a set of classes (non-visual) which provide various imaging operations (load and save images from and to files,

transformations and effects etc.). Support of various formats: JPEG, PNG, GIF, WBMP, TIFF, BMP (read and write), PCX, PSD (read only) and PDF, SWF (write only) is included. Various vector objects can also be loaded into the control (rectangles, ellipses, text, polylines and polygons) and object appearance (color, fill) can be modified at runtime.

BCGSoft

BCGControlBar Library Professional V10.0

Create Office, Visual Studio and IE style user interfaces.

- Includes a customizable Office 2007 style Ribbon control
- Includes more than 200 well designed, tested MFC extension classes

BCGControlBar Library for .NET

BCGControlBar ("Business Components Gallery ControlBar") is an MFC extension library that allows you to create Microsoft Office 2000/XP/2003/2007 and Microsoft Visual Studio-like applications with full customization options (Ribbons, Customizable Toolbars, Menus and more) and a rich set of professionally-designed GUI controls such as Calendar, Grid, Editor, Gantt and many others. BCGControlBar library has more than 200 thoroughly designed,

tested and fully documented MFC extension classes which can be easily incorporated into your application and save you hundreds of development and debugging hours. It includes advanced features such as detachable tab panes, auto hide panes, new docking algorithms (similar to those introduced in Microsoft Visual Studio and Microsoft Visio), text editor with syntax highlighting and IntelliSense-style support, Office-style calendar, professional grids and much more.

Change Vision

JUDE V5.2.1

Business process UML modeling tool.

- Edit model information directly, without opening dialog boxes
- Supported diagram types include Class, UseCase, Sequence, Collaboration, StateChart, Activity, Component and Deployment

JUDE

JUDE includes basic features to make modeling simple and user friendly. JUDE is suitable for business use, handling large-sized models and document creation. It includes enriched features, such as the ability to change your view freely using a map view, zoom by dragging, unlimited undo/redo, the ability to output project information to a CSV file, automatic generation of class diagrams with model information, diagram creation guidance and more. JUDE supports basic UML 1.4 diagrams

including: UseCase, Sequence, Collaboration, Statechart, Activity and Class (Object/Package/Robustness).

You can lock project files from other users, set the font for the whole project file and configure print setting for each diagram. JUDE also lets you display multilingual aliases (e.g. English and Japanese) on diagrams, export diagrams to RTF and HTML documents and generate Class diagrams from Class files.

Bennet-Tec Information Systems

MetaDraw WinForms for .NET

Add Object Oriented image components to your .NET applications.

- Create, edit, display and save pictures built from a set of graphic objects
- Support for Object Oriented editing: moving, sizing, change colors and other attributes

MetaDraw WinForms for .Net

MetaDraw for WinForms .Net is an easy-to-use, robust Object Oriented image component that has been completely rewritten to take advantage of the infrastructure provided by .NET. MetaDraw for WinForms .Net lets your users create and move shapes and images, link objects by diagram lines, draw out floor plans, recognize shapes, identify drawn elements, dynamically

manipulate image layout, recognize clicks and drags on specific graphic elements, link data to individual hotspots and more. It includes the following features: OLE drag and drop, multi-step undo/redo support, JPG, PNG, EMF format support, save/load pictures to/from database fields, zoom support for lines, arcs, poly lines and more.

Chant

SpeechKit V5.0

Develop software that speaks and listens.

- Includes components for speech recognition (speech-to-text) and speech synthesis (text-to-speech)
- Speech-enable desktop, server and mobile applications or Web pages

SpeechKit

SpeechKit allows you to integrate speech technology and deploy speech-aware applications and Web sites. It includes components for speech recognition and speech synthesis. Whether you develop desktop, server, mobile, telephony, Internet software, or Web pages, SpeechKit can transform text to speech for audio playback and speech to text for your software to

process. This liberates your software from keypads, keyboards, etc. as input devices by letting end users talk with it. SpeechKit allows users to verbally fill out forms, query databases, navigate applications and more, while also performing text-to-speech so the application can communicate with the user without requiring them to read what is on the screen.

The Premium Suite of ASP.NET 3.5 Controls

Introducing a Unique High-performance AJAX Approach

ComponentArt

Web.UI

for ASP.NET

- ▶ 19 premium UI controls for ASP.NET, ASP.NET 2.0, ASP.NET AJAX and now ASP.NET 3.5
- ▶ The suite contains the fastest Grid, most powerful navigators and a brand-new Editor control
- ▶ ComponentArt's client-side rendering delivers high-performance UIs with minimal page footprint
- ▶ Industry-leading client-side APIs bring an unsurpassed level of programmatic control
- ▶ Direct binding to web services and JSON collections enables rich, immediate web experiences

Download fully-functional trial versions today at www.componentsource.com

ComponentArt
Build Something Amazing

ComponentArt Web.UI 2008.1 for ASP.NET

Advanced user interface suite of ASP.NET AJAX controls.

- Unique rendering technology delivering ultra-light footprint
- Complete programmatic control through client-side APIs
- Designed to incrementally target ASP.NET 1.0, 2.0, AJAX and 3.5

Web.UI for ASP.NET

Web.UI for ASP.NET includes 19 user interface controls for the development of sophisticated Web applications. It includes the following controls: Calendar, CallBack, ComboBox, Dialog, Editor, Grid, Menu, MultiPage, NavBar, Rotator, SiteMap, Snap, SpellCheck, Splitter, TabStrip, ToolBar, TreeView, Upload, WebChart Lite; available in four progressively more powerful

framework builds: ASP.NET 1.0, ASP.NET 2.0, ASP.NET AJAX and ASP.NET 3.5. Common functionality is shared among all four Web.UI platform builds. Public APIs of higher platform builds are perfect supersets of lower platform builds. Client-side syntax is fully compliant with Microsoft's AJAX Library JavaScript syntax and naming conventions.

Crownwood Software DotNetMagic V5.4

Create Microsoft Office style applications in minutes.

- Provide VS 2005 style docking windows with docking indicators
- TabbedGroups control provides flexible, customizable MDIs
- Includes a high performance, scalable tree control

DotNetMagic

DotNetMagic user interface library provides Office 2007 style rendering including the blue, silver and black Office schemes. It also has a docking window system that offers all the features found in Visual Studio .NET. It mimics the appearance of Visual Studio .NET and features; multiple content in same row or column, multiple content inside same docking window, the ability to restore windows in same row or column and an auto hide capability just like Visual Studio .NET. The TabbedGroups control provides a similar ability to organize documents

as found in Visual Studio .NET. The window docking features include, edge docking, floating, pinnable, sliding auto hide and hide and show. The customizable Tree control includes: none, single or multi-select modes, support for XP Themes, groups and list style and full color customization.

Full source code, 12 months of updates and 12 months email support is included. Visual Studio 2005/2008 compatible. C# and VB.NET samples included.

Compuware DevPartner Studio Professional Edition V8.2

Build reliable applications and components for .NET and Windows.

- Simulate .NET Framework faults and test error handling code
- Export memory, performance and coverage data into useful reports
- Supports full Visual Studio 2005 integration

DevPartner Studio

DevPartner Studio Professional Edition helps developers build reliable, high-performance applications and components for .NET and for native Windows by quickly solving problems with .NET migration, legacy integration, locating errors in code, memory analysis, tuning runtime performance across distributed applications, and assuring thorough

testing. DevPartner's memory analysis shows you the amount of memory consumed by an object or class, tracks the references that are holding an object in memory, and identifies the lines of source code within a method responsible for allocating the memory. DevPartner Studio Professional Edition integrates with Visual Studio .NET 2003 and 2005 and Visual Studio 6.

Data Techniques

FaxMan V4.4

Seamlessly embed fax support into your Windows applications.

- Create faxes from any app using the included FaxMan printer driver
- Sophisticated logging keeps track of every fax you schedule
- Supports almost all Class 1, Class 2, and Class 2.0 faxmodems

FaxMan

FaxMan is a programmable fax engine for providing fax sending and receiving capability with total control over the faxing process and the user interface.

The developer kit includes ActiveX OCX, DLL and managed .NET component interfaces to support virtually any Windows application, and automatically works with almost

all Class 1, Class 2, and Class 2.0 faxmodems. Includes sample source code in Visual Basic and Visual C++.

FaxMan SDK allows developers to integrate Fax support for industry standard fax modems in hours instead of the months it would take to write support from scratch.

DBI Technologies

Solutions::Schedule for .NET V2.0

Build team management and resource planning solutions.

- Share schedule, appointment, contact, location and task information
- Supports TimeBar linking, cell-level formatting, multi-select TimeBar and more.

Solutions::Schedule for .NET

Solutions::Schedule for .NET allows developers to create scheduling solutions such as those found in the healthcare or services sector. Solutions::Schedule .NET includes intuitive mouse driven scheduling and planning with Gantt-style project management features. Other features include independent cell formatting, timebar overlap, split and linking

styles. You can easily add a visual reference point for the current date and time in a schedule by using the Current Time Line feature. Time lines extend vertically through the schedule area and are drawn along the major time segments. Developers can also add Zoom-in/out capabilities by programmatically changing the value of the TimeDistance property.

SMSC Connectivity SDK V3.0

Accelerate the development of two-way SMS and EMS messaging applications.

- Encapsulation of SMSC communication protocols
- Worldwide deployment possible, tested with all major SMSCs
- Easy-to-use and well-structured developer API

SMSC Connectivity SDK

SMSC Connectivity SDK saves you from the time-consuming implementation of sophisticated low-level communication protocols (UCP, SMPP, Sema OIS, CIMD2) needed for high-speed messaging applications with direct SMSC access. Your application will be mobile messaging enabled within a few days.

communication protocols: SMPP, UCP, Sema OIS and Nokia CIMD2 and supports all major SMS formats including 7bit ASCII, 8bit binary, EMS, Unicode, Flash-SMS, picture messages, logos, ringing tones, group graphics and smart messages.

It includes a COM developer toolkit for mobile messaging that enables sending and receiving of SMS/EMS via direct SMSC links (up to 40 messages a second). It encapsulates all major SMSC

SMSC Connectivity SDK includes SMSC connectivity for both TCP/IP and X.25 as well as delivery notifications. Also included is an easy-to-use and well structured developer API, comprehensive documentation and samples.

The Professional Developer's #1 Choice for Communications, Security, & E-Business Components

Internet Communications

IP*Works! Products

TCP/IP **Secure SNMP**
SSL **Zip**
S/MIME **EDI AS2**
S/Shell

Our flagship product line. The result of more than a decade of research and development in building Internet connectivity tools for professional software developers.

Components for: Web and Web Services, Email and News, File Transfer, Sockets and Streaming, Remote Access, Instant Messaging, SSL and Secure Shell Security, Certificate Management & Creation, S/Mime Encryption, SNMP Network Management, File & Streaming Compression, and E-Business (B2B).

Internet Business

IBiz Integrator Products

QuickBooks **First Data**
E-Payment **USPS**
E-Banking **FedEx**
Vital/TSYS **Amazon**
Paymentech **PayPal**

The IBiz product line provides small and medium-sized companies with enterprise-class software components for Internet business integration. Built on top of our award winning IP*Works! tools, these easy-to-use components enable developers to rapidly integrate common business processes.

Components for: Accounting Integration (QuickBooks), Credit Card Processing, ACH / E-Check Processing, Shipping and Tracking, Banking & Financial Transactions, and Services Integration.

Enterprise Adapters

BizTalk & SQL Server Adapters

AS2 / EDI-INT **GISB / NAESB**
SFTP / FTPS **OFTP**
XMPP (Jabber) **Secure Shell**
SMS Paging **Secure Email**
AWS Integration

The /n software Adapters extend Microsoft BizTalk and SQL Server with advanced Internet communications, security, and e-business capabilities, including robust, highly scalable, fully integrated implementations of B2B messaging and secure communications protocols.

Components for: EDI-INT AS2 Integration, Secure File Transfer, Secure Shell Remote Execution, Secure Email, RosettaNet Connectivity, OFTP Integration, NAESB / GISB Messaging, and more.

dLSoft

Barcode-2D IMG Server for IIS V3.50

Add fully featured 2D-barcodes to your Web pages

- Server-side Barcode solutions for Internet Information Server
- Supports Aztec, DataMatrix, MaxiCode, PDF417, Micro-PDF417, QR Code and RSS barcodes

Barcode-2D IMG Server for IIS

Barcode IMG Servers for IIS are systems for incorporating barcode images on Active Server Pages (ASP.NET or ASP) using server-side processing to provide the SRC for an IMG tag. The results may be viewed on all major browsers, including Microsoft's Internet Explorer, Netscape and Mozilla on any platform. The system has been devised in such a way that runtime write access to the IIS

server is not required. Barcode-2D IMG Server for IIS generates barcode images as GIF, PNG or WMF images from ASP pages simply using IMG SRC=barcode.asp. Handles Aztec, DataMatrix, MaxiCode, Micro-PDF, PDF417 RSS and QR barcodes, including full control over mode, security level, colour, bar width ratio, etc.

Global Majic Software

Instrumentation ActiveX Library V3.5

Provide visual gauges for technical applications.

- A suite of instrumentation interface controls
- Provides full control over instrument properties
- Very simple and intuitive to configure

Instrumentation ActiveX Library

Instrumentation ActiveX Library is a suite of 11 common instrumentation interface controls including Angular Gauge, Knob, LED, Linear Gauge, Numeric LED, Odometer, Percent, Selector Knob, Slider, Strip Chart, and Toggle. Each component gives you full control over instrument properties including scales, captions, tics, etc. Angular Gauge allows multiple scales,

needles, captions and tics. Linear Gauge allows multiple scales, knobs, captions and tics. Numeric LED allows you to build your own digital clock with an easy-to-use alpha-numeric component. Odometer offers a numeric display similar to automobile odometer or tripometer. Toggle switch control has bitmap and sound playing capabilities.

Graphics Server Technologies

Graphics Server .NET V4.0

Add rich charting functionality to your .NET applications.

- Includes data binding properties for Windows Forms and ASP.NET
- Bind to data sources created in Visual Studio at design time
- Includes Funnel/Vertical chart type and DigitalClock widget

Graphics Server .NET

Graphics Server .NET provides a comprehensive, flexible solution for adding graphs, charts and widgets to both Web and Windows applications. Graphics Server .NET includes features like drilldowns, 'live charts', mouse events and built-in statistical features. It lets you add sophisticated graphs and charts in just minutes with the Interactive Designer. Chart types include: pie (2D & 3D), doughnut, line

(2D & 3D), 100% stacked, area (2D & 3D), horizontal bars (2D & 3D), 100% stacked, pareto, vertical bars (2D & 3D), bubble (2D & 3D), candlestick, high, low, open close, volume, range, funnel, Gantt, multi-segment, polar, radar, scatter etc.

Server licenses are not required and distribution is royalty free.

Gravitybox Software

Gravitybox Schedule.NET V5.3

Add scheduling to your .NET applications.

- Show your users any combination of dates, times, rooms, providers or categories
- Customizable with event notifications for virtually everything

Gravitybox Schedule.NET

Gravitybox Schedule.NET is a software component that supports dates, times, rooms, providers, and categories and allows you to add full drag-and-drop scheduling to any .NET application. It was designed from the ground up with a doctor's office in mind. There are built-in dialogs for out-of-the-box use and also includes appointment conflict resolution which is built-in.

Any schedule can be displayed in 15 modes and you may choose to display

the time on either the X or Y axis with the dates on the opposing axis. Moreover, you may wish to include a Room collection (or any object collection) for each day and time. With so many view modes you will be able to display your scheduling information in any fashion desired. Gravitybox Schedule.NET also includes designers available to edit objects at design-time that provide an interface for editing objects in the property grid.

Indigo Rose

Setup Factory V7.0

Create professional installations using a clear visual design environment.

- Wizard based creation of installation packages (no coding needed)
- Code editor for advanced developers to 'fine tune' installations
- Extensive customization through actions library, themes and skins

Setup Factory

Setup Factory offers developers a solution for creating flexible installation systems without needing to learn a proprietary scripting language. It further sets itself apart by providing the customization and advanced control features that developers require, all from within the Setup Factory Visual Design Environment. You can even deploy your applications for

Web servers. Setup Factory contains a scripting engine that offers all the usual programming logic such as loops, functions and arrays and more. It includes an action wizard that makes it easy, even for someone with zero programming knowledge to simply click to add actions. Also included is a script editor that makes it easy for advanced users to edit code directly.

Inabyte

InaXplorer Control Set V3.0

Enable your application to mimic the functionality of Windows Explorer.

- New features include: Thumbnail view, hidden folders, support for hidden (\$) folders unc(s)
- Supports Windows Terminal Server

InaXplorer Control Set

InaXplorer Control Set is a collection of three ActiveX controls for creating a hierarchical explorer application: The INAXploreCombo control is used to give the developer a full implementation of the "top" combo control in a normal Windows Explorer window. This control along with the INAXploreListView and the INAXploreTreeView control can be

combined to create an application that mimics the Window Explorer. The three controls are referred to collectively as Xplorer components. InaXploreListView mimics the left-hand Explorer pane to display files and folders. InaXploreTreeView mimics the right-hand Explorer pane to display full folder/namespace view.

Iocomp Software

Iocomp .NET WinForms Ultra Pack V3.0

Real-time instrumentation display controls for instrumentation applications.

- GDI+ : anti-aliasing, gradients and additional line & fill styles
- Vector drawing - no fixed images which cause sizing issues
- Full code examples for all properties, methods and events

Iocomp .NET WinForms Ultra Pack

The Iocomp .NET WinForms Ultra Pack controls were written in 100% managed C# and take full advantage of GDI+. They produce instrumentation controls with a professional look and tight integration into Microsoft's .NET Framework. Custom property editors provide fast-and-simple configuration eliminating arduous property window searching.

The Ultra Pack includes the 55 Instrumentation Professional Pack controls plus the Plot Pack component.

These controls can be used for scientific, engineering, medical, oil and gas, semiconductor, factory automation, aerospace, labs, and hundreds of other types of applications.

it-partners.com itGrid V2.0.3

Ultra fast Enterprise-class data grid and combo.

- Load, sort, and sub-total thousands of rows in a fraction of a second
- Styles include CheckBox, Combo, DateTime, ImageList and more
- Supports XP themes plus printing and print preview

itGrid

itGrid is an ultra fast data grid and combo that can load, sort, sub-total and present thousands of data records in a fraction of a second.

Unlike other grid products, itGrid focuses solely on performance and the end-user experience. It was designed for professional developers who need to display or manipulate large amounts of client-side data. It includes simple to use column 'styles' that determine column behavior. Styles

include CheckBox, Combo, DateTime, Default, ImageList, OwnerDraw, OwnerDrawCombo and UpDown. It can be bound (OLEDB) or unbound and includes advanced hierarchal capabilities that are perfect for displaying XML.

At around 340kb, itGrid is one of the smallest grids on the market and exposes its internal combo control for standalone use.

Data Dynamics Reports

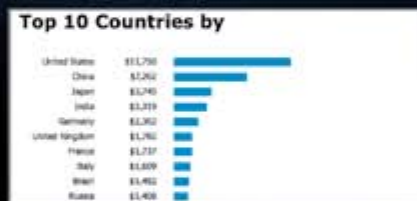

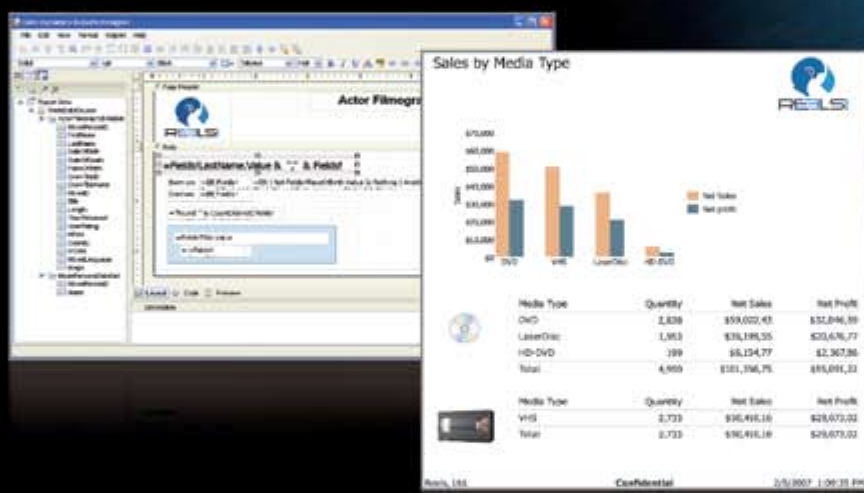

Go Ahead, Show Off

Introducing Data Dynamics Reports, a new royalty-free reporting toolkit for Microsoft .NET developers. Based on the Report Definition Language (RDL), Data Dynamics Reports integrates into Web and Windows Forms applications and provides a rich API with which to create and modify reports.

In addition to the base features provided by RDL, Data Dynamics Reports has added several new features to make your reports really shine.

Go ahead. Show off. With Data Dynamics Reports, you have the tools to do it right.

Master Reports

Provide a template containing data sources, data sets, and common report items to report authors.

Data Visualizers

Data bars, color scales, icon sets, and range bars all help explain your data at a glance.

Barcode

Save time and money with the included Barcode report item. It supports 23 of the most popular barcode symbologies, from Code39 to UPC, PostNET, and JapanesePostal.

Enhanced Chart Data Region

The Chart data region contains many new chart types including Gantt, Pyramid, Funnel, and many new financial charts.

Banded List

The BandedList data region gives the author the ability to position items freely as in a List, but with the added grouping support of a Table.

Formatted Text

Insert XHTML right into your report with the FormattedText report item.

Designer Control

A designer control is included so your users can create reports from within your own application.

Word Export

With the included Word rendering extension, you and your users can export reports to Word document format directly from the viewer without purchasing costly components.

NETRONIC Software

VARCHART XGantt ActiveX V4.1

Add Gantt chart capability to your applications.

- Comprehensive API to customize your application exactly to your needs
- Relational data model easily connects your data to the graphical elements of your Gantt view

VARCHART XGantt ActiveX

VARCHART XGantt ActiveX is a graphical charting software component for visualizing business activities. It offers clear, concise and detailed process flows, identification, tracking, scheduling and allocation of tasks and resources over time.

Benefit from the clear-cut and comprehensive display of tasks in the

form of Gantt charts and give your customers the ability to edit their data quickly and easily, while at the same time controlling which fields can be changed and which are 'read-only'.

VARCHART XGantt ActiveX may be used for in-house applications as well as for products or applications to be sold to third parties.

Newtone

ImageKit7 V7.0

Create, edit and manipulate a variety of image types to enhance your applications.

- Display Vector data (DXF(2D), WMF, EMF, SVG, SXF)
- Images are resized to fit the dimensions of the ImageKit control
- Multi-layer functionality

ImageKit7

ImageKit7 is a component that allows you to add image processing functionality to your applications quickly and easily. It lets you load and save image files; edit, display, and print images; draw shapes and text on images; display images as thumbnails or in slideshows.

ImageKit7 supports JPEG2000, SVG, SXF and other new file formats. It can load and save image data directly from memory and can stream image data directly to a browser. It can read

BLOB data from and save BLOB data to databases and can convert raster image data to vector image data. It can retrieve images from TWAIN scanning devices and can automatically detect paper when scanning.

ImageKit7 is a multi-threaded component that can be used for Web server application development. Included are methods that support variant type parameters for use in ASP and other scripting languages that require variant types.

O2 Solutions

PDF4NET V3.3

Add PDF capabilities to your .NET applications.

- Create and edit PDF files and perform automated PDF form filling
- Unlimited pages per document, each with its own size and orientation
- Now supports PDF annotations, layers and alpha transparency

PDF4NET

PDF4NET is a .NET library for creating, editing and filling PDF files on the fly from any .NET application. The library provides a simple API that allows you to create complex PDF documents, or to edit existing PDF files with a few lines of code. Its core functionality can be divided into 3 main areas: PDF creation, PDF editing and PDF forms filling.

Other features include native support for most 1D and 2D barcodes and the ability to create headers, footers, page templates and layers. The library provides support for both standard .NET Framework and Compact .NET Framework. Project costs are reduced when developing with PDF4NET because it can be distributed royalty free.

PDFlib PDFlib PLOP V3.0

PDF linearization, optimization and protection.

- Create efficient and small PDF documents for fast Web delivery
- Encrypt a PDF document with user or master password or both
- Includes pCOS interface for querying details about a PDF document

PDFlib PLOP

PDFlib PLOP is a versatile tool which can repair, linearize, optimize, encrypt, and decrypt PDF documents. PLOP linearization and optimization features create efficient and small PDF documents for fast Web delivery. PLOP protection features encrypt or decrypt PDF documents and apply or remove permission settings, such as "printing not allowed" or "content extraction

not allowed". The PLOP repair mode automatically detects damaged PDF documents and fixes the problems if possible.

PLOP analysis features can be used to query arbitrary properties of a PDF document such as font lists, metadata, page size, and many more.

plexityHide.com GTP.NET V3.1

Add interactive Gantt charts and scheduling to your applications.

- Supports AJAX with client-movable and resizable time items
- Features asynchronous collision detection and handling of time items
- Security awareness enables deployment on XBAP or ClickOnce

GTP.NET

GTP.NET is a complete .NET re-write of the best-selling Gantt Time Package. It's overall goal and purpose is to let you visualize and manipulate time based information.

GTP.NET includes a collection of user interface components which handle time blocks. The time blocks are displayed in a Gantt chart or a schema view. The times are connected to an owner, for example a person or an activity in a project. You can also use it

to display dependencies and collisions between times, which gives the end user a graphical way to view and modify the project. GTP.NET includes the ability to select and re-assign links and also provides databinding for links between time items.

GTP.NET includes three pre-built sample applications for a Project Planner, Resource Booker and Weekly Planner. All 3 samples are short and to the point of the problem they solve.

First we built **the fastest** grid for **ASP.NET**.

Then we made it **fast-and-furious**.

Introducing RadGrid for ASP.NET AJAX formerly "Prometheus"

The screenshot displays a web application interface. At the top, there is an email inbox with columns for From, Name, Received, and Subject. Below the inbox is a data grid with columns for CustomerID, Contact Name, Company, OrderID, Date Ordered, and EmployeeID. A calendar is overlaid on the Date Ordered column, showing the month of February 2008. The grid is displaying data for several records, including one for Antonio Moreno. A 'Loading...' dialog box is visible over the grid, indicating that the data is being updated or refreshed.

- Handles thousands of records in milliseconds
- More powerful data binding engine
- Richer client-side functionality
- Special SEO rendering for full data indexing
- Various export formats (PDF, Excel, CSV)
- XHTML and accessibility compliant

 **telerik**
deliver more than expected

Raize Software CodeSite V4.2

Locate and eliminate problems in your Delphi and C++Builder code.

- Captures detailed information
- CodeSite messages do not interrupt the flow of your application
- Live logging and file logging can be performed either locally or remotely

CodeSite

CodeSite is an add-in for Borland Delphi and C++Builder that enables you to send detailed information (including string lists, objects, even bitmaps) from within your application code to a specialized receiver. Unlike message boxes and inspecting variables on breakpoints, CodeSite messages are not transient. The resulting log of messages sent

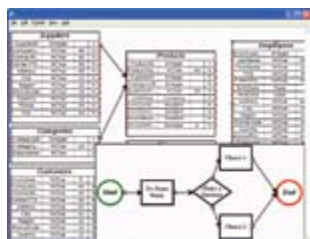

to a destination provides valuable information for locating problem areas in your code. Sending CodeSite messages does not interrupt the flow of your application as happens when message boxes and breakpoints are used. As a result, CodeSite is much more effective in situations where user interactions (e.g. focus changes) and painting issues need to be tracked.

Ripple Systems Impact Expression V1.0

Semantic object driven diagramming.

- Visualizations can be generated automatically by tying graphic and layout components directly to business objects
- Includes real-time updating of the diagram as object properties change

Impact Expression

Impact Expression is a semantically driven diagramming component that can easily add rich diagramming capabilities to any project. Visualizations can be generated automatically by tying graphic and layout components directly to business objects representing Flow Charts, Business Processes, Workflow, etc.

Impact Expression allows you to drive the diagram with business objects instead of just shapes. This allows for rapid integration into your business

systems, including real-time updating of the diagram as object properties change. Shape templates and the mappings from business objects into their representative shapes are defined in an easy to use XML file. Semantic mappings allow the developer to specify an association between a particular business object and a shape representation for that object. Specific properties (both single-valued and lists) can be associated with properties of the Shape.

Resco Resco MobileApp Developer Pack V1.0

Develop professional applications for Windows Mobile platforms.

- Contains all Resco developer controls, libraries, tools & sample projects
- Includes Mobile Enterprise Samples written in C# and VB .NET
- Fully integrated into VS 2005/2008

Resco MobileApp Developer Pack

Resco MobileApp Developer Pack is a suite of all Resco developer controls, libraries, tools and sample projects that help you develop professional mobile applications for Microsoft Windows Mobile platforms. All products are integrated into Microsoft Visual Studio 2005/2008.

Resco MobileApp Developer Pack consists of two parts, Visual Studio controls, including: AdvancedList .NET, AdvancedTree.NET, DetailView .NET,

SmartGrid .NET, OutlookControls .NET and Resco Zip, and Enterprise Samples which include: MobileSurvey Manager - a desktop application allowing the user to design surveys. MobileSurvey Client - a mobile application, allowing the mobile user to fill-in a survey using a Windows Mobile Pocket PC or Smartphone device. MobileSurvey Webservice - performs the data synchronization.

Sax.net Crescent QuickPak V4.5

Visual and Performance enhancement for Windows (inc. XP SP2) applications.

- Custom data entry, editing and presentation controls for ActiveX
- Easily access the power of the Windows API
- Includes fast date/time arithmetic, plus financial and statistical routines

Crescent QuickPak

Crescent QuickPak is a comprehensive collection of 32-bit ActiveX components for developing applications using Visual Basic that will reduce development time and increase productivity. It includes the following custom controls; calendar display, caption, enhanced frame and checkbox, extended command button, enhanced combo box, form enhancement, hypertext, frame and option button, data-specific input/edit controls, enhanced list boxes and additional display controls. It has low-

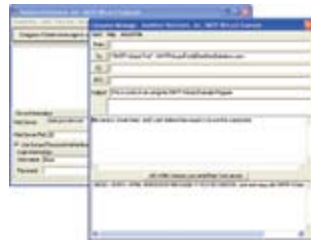

level routines for fast performance. You can sort arrays of all data types, even for large (>64K) arrays of any record size. Load and save arrays in a single operation and get simplified access to Windows API services. No knowledge of the Win32 API is needed, all routines are easy to call, with simple names and intuitive calling syntax. It also has high-level methods such as, all financial and statistical routines in Lotus 1-2-3. File operations: searching and encryption, copying on wild card specifications, file access routines, error-handling, etc.

Seekford Solutions SMTP Wizard SSL V3.0

Give your applications the ability to send emails with file attachments.

- Send HTML and regular plain-text messages
- Supports SOCKSv4 and SOCKSv5
- Send messages Asynchronously freeing your application to do other work

SMTP Wizard SSL

SMTP Wizard SSL is an ActiveX component that enables you to build a message, add files to it, and send it through a mail server. Your project can send out email notifications, error reports, customer responses, and much more. This control works with any ActiveX container and even works in ActiveX scriptable languages such as VBScript. SMTP Wizard SSL allows you

to access an SMTP server with minimal knowledge of how SMTP works and very little code. There are many features for simplifying the tasks of accessing and utilizing an SMTP server. The control talks directly with the SMTP servers and completely bypasses MAPI and any of the problems that MAPI has.(i.e. Security dialogs and other nuisances).

SourceGear Corporation SourceGear Vault V4.1.1

A compelling replacement for Visual SourceSafe.

- Offers full integration into the Visual Studio .NET environment
- Now includes an Eclipse client and better VS2005 integration
- Client/Server communication over HTTP or optionally with SSL

SourceGear Vault

SourceGear Vault is a version control system for Windows developers, with complete integration into the Visual Studio.NET environment. SourceGear Vault is implemented entirely in the .NET Framework and uses SQL Server 2000 for its repository storage. SourceGear Vault is designed specifically to offer a seamless transition from Visual SourceSafe and includes an import tool which can be

used to migrate data from a SourceSafe database into a Vault repository; every version of every file is imported, including all the history.

SourceGear Vault's basic architecture is a centralized Vault server which manages one or more repositories. It includes several client applications and also provides a way to create custom clients using any .NET language.

SlickEdit SlickEdit for Windows 2008 (V13.0)

Create, navigate, modify, build and debug code faster and more accurately.

- Features include auto-completion, automatic comment wrapping, smart line selections and syntax expansion
- Now provides automatic XML/HTML formatting as you edit

SlickEdit

SlickEdit is a multi-platform, multi-language code editor supporting 8 platforms, over 40 languages, and 13 editor emulations. It can be used as a standalone development environment or as a complementary editor, providing programmers with a tool to create, navigate, modify, build, and debug code faster and more accurately. SlickEdit's features

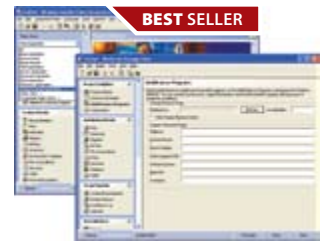

include Code Navigation, Preview Tool Window, References Tool Window, Syntax Expansion, Surround With, Auto-Completions and many more. Write more code in less time and spend less time waiting for results. Programmers can type fewer characters and make fewer errors using syntax expansion, completions, aliases, and code templates.

Wise Solutions (Symantec®/Altiris) Wise Installation Studio V7.0

Create installations for desktop, server, Web or mobile platforms.

- Build either MSI or WiseScript installations with a few mouse clicks
- Minimize reboots using the Vista Restart Manager Infrastructure
- Supports XML Web services, 64-bit, virtualization and more

Wise Installation Studio

Wise Installation Studio provides you with a comprehensive collection of tools and technologies for authoring software installations for Windows devices. Wise Installation Studio supports multiple installation technologies including Microsoft Windows Installer (.MSI) and WiseScript formats. You can also create installations for .NET applications,

client-server applications, and mobile device applications. It features advanced installation authoring technology such as support for virtual packages, mobile devices, and digital rights management. The new Virtual Package Editor lets you create and edit a virtual software layer, a virtual software project file (.WVP), or a virtual software archive file (.VSA).

The Most Powerful ActiveX Component Suite Available Anywhere...

Codejock empowers ActiveX developers with rock solid, professional user interface components for desktop applications.

Calendar

Easily create a scheduling calendar that can manage appointments arranged by day, week, work week or month.

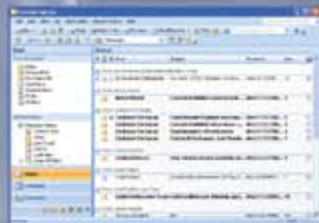

Controls

Large collection of components to handle many of today's modern GUI development requirements.

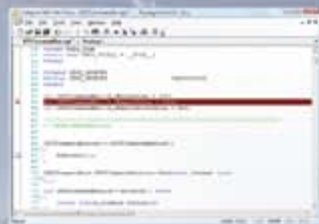

Property Grid

Visual Studio style Property Grid to easily create a hierarchical list of editable properties and data types.

Shortcut Bar

Office Shortcut Bar menu similar to the navigation panel seen in Outlook to help organize your application.

Syntax Edit

Sophisticated text editor that supports advanced text block grouping, syntax colorization, line numbers, and more.

Command Bars

Office style Ribbons, Command Bars and Menus providing a fully customizable application workspace.

Docking Pane

Visual Studio style docking including tear off tabs and auto hide windows to help organize your application.

Report Control

Outlook style grid to create, group and sort data in a flat or hierarchical format that can be bound to a data base.

Skin Framework

Application skinning framework technology that can apply a completely new skin to your entire application.

Task Panel

Customizable Task Panel similar to what is seen in Office, Windows Explorer or Visual Studio's Toolbox.
