faster than a speeding bullet,
more powerful than a locomotive,
 able to **simplify connectivity** with a single component.

The Professional Developer's #1 Choice for Communications, Security, & E-Business Components

Internet Communications

IP*Works! Products

TCP/IP **Secure SNMP**
SSL **Zip**
S/MIME **EDI AS2**
S/Shell

Our flagship product line. The result of more than a decade of research and development in building Internet connectivity tools for professional software developers.

Components for: Web and Web Services, Email and News, File Transfer, Sockets and Streaming, Remote Access, Instant Messaging, SSL and Secure Shell Security, Certificate Management & Creation, S/Mime Encryption, SNMP Network Management, File & Streaming Compression, and E-Business (B2B).

Internet Business

IBiz Integrator Products

QuickBooks **First Data**
E-Payment **USPS**
E-Banking **FedEx**
Vital/TSYS **Amazon**
Paymentech **PayPal**

The IBiz product line provides small and medium-sized companies with enterprise-class software components for Internet business integration. Built on top of our award winning IP*Works! tools, these easy-to-use components enable developers to rapidly integrate common business processes.

Components for: Accounting Integration (QuickBooks), Credit Card Processing, ACH / E-Check Processing, Shipping and Tracking, Banking & Financial Transactions, and Services Integration.

Enterprise Adapters

BizTalk & SQL Server Adapters

AS2 / EDI-INT **GISB / NAESB**
SFTP / FTSP **OFTP**
XMPP (Jabber) **Secure Shell**
SMS Paging **Secure Email**
AWS Integration

The /n software Adapters extend Microsoft BizTalk and SQL Server with advanced Internet communications, security, and e-business capabilities, including robust, highly scalable, fully integrated implementations of B2B messaging and secure communications protocols.

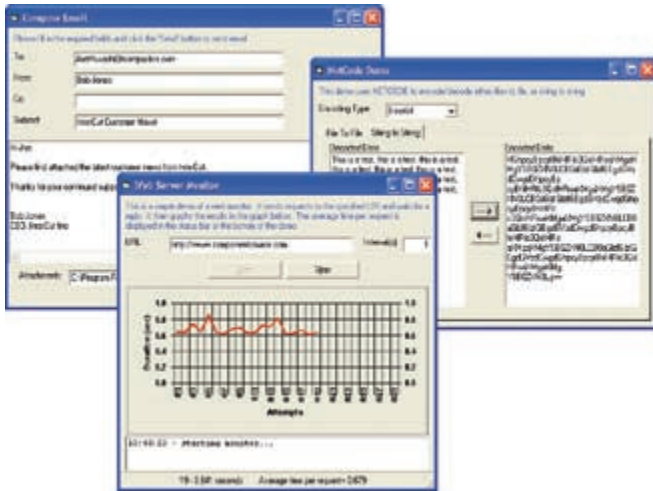

Components for: EDI-INT AS2 Integration, Secure File Transfer, Secure Shell Remote Execution, Secure Email, RosettaNet Connectivity, OFTP Integration, NAESB / GISB Messaging, and more.

/n software

/n software Red Carpet Subscription Q2 2009

Write communications, security and e-business applications.

- Includes components for FTP, IMAP, SNMP, SSL, SSH, S/MIME, Digital Certificates, credit card processing and e-business (EDI) transactions
- New - Windows WF Activities for transferring files, email and more

IP*Works!
Includes IP*Works! which is a comprehensive framework for Internet development.

Internet Communications
Includes IP*Works! which is a comprehensive framework for Internet development.

Secure Components
Subscription includes secure versions of many of the IP*Works! components.

IBiz Integrator Products
Components for Internet payment, accounting, management and other common e-business services.

Windows Workflow Foundation activities
Includes activities that make it easy to integrate Internet capabilities into your workflow packages.

Everything in One Subscription
There are no technology restrictions, so you get everything. .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X.

/n software Red Carpet Subscription

One developer, multiple workstations, all /n software products.

/n software Red Carpet Subscription gives you components for every major protocol from FTP to IMAP to SNMP, SSL and SSH security, S/MIME encryption, Digital Certificates, credit card processing, ZIP compression, Instant Messaging, shipping & tracking, e-business (EDI) transactions and robust Enterprise ready Internet connectivity, secure messaging and file transfer for Windows Workflow Foundation. There are no licensing restrictions, so you can code on your work machine, your notebook or even your home machine. Plus there are no technology restrictions, so you get everything: .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X. You receive

quarterly update CDs with free updates, upgrades and new releases. It includes more than \$30,000 worth of software including: all /n software products - IP*Works!, SSL, S/MIME, S/Shell, Zip, EDI, IBiz Integrators for QuickBooks, Enterprise Adapters, Paymentech, E-Payment, Vital/TSYS, USPS, Workflow Activities etc.

/n software Red Carpet Subscription includes IP*Works! which is a comprehensive framework for Internet development and is the core building block for most /n software products. IP*Works! eliminates the complexity of Internet development by providing easy-to-use, programmable

components that facilitate tasks such as sending email, transferring files, managing networks, browsing the Web, consuming Web services, etc.

It includes support for all major internet protocols: ATOM, DNS, FileMailer, FTP, HTMLMailer, HTTP, ICMPPort, IMAP, IPDaemon, IPInfo, IPMonitor, IPPort, LDAP, MCast, MIME, MX, NetClock, NetCode, NetDial, NNTP, Ping, POP, RCP, REST, Rexec, Rshell, RSS, SMTP, SNMP, SOAP, Syslog, Telnet, TFTP, TraceRoute, UDPPort, WebDav, WebForm, WebUpload, Whois, XMLP and XMPP.

Also included in the /n software Red Carpet Subscription is IP*Works! SSL which is a suite of secure, SSL-enabled

drop-in replacements for the "classic" IP*Works! components.

The components are fast, robust, and reliable and consume a minimum of resources. They are small and lightweight with no dependencies on external libraries. Included are native development components for all supported platforms and component technologies. IP*Works! includes a complete unified framework with a common, easy to learn object model and simplified interfaces allowing you to be more productive. The components are rigorously tested having undergone thousands of hours of testing, you also get reference documentation, hundreds of sample applications and fully indexed help files.

If Software Installations or Deployments Are Your Job, Acresso Software Has Your Solution

NEW! InstallShield® 2009

How the World Installs Software on Microsoft Windows

InstallShield makes it easy to author reliable MSI and InstallScript installations for Windows platforms, keeping your customers happy and your support costs down.

Optimise Installations for Windows Vista™ SP1

Easily create Vista Logo Certified setups using tools that support the Restart Manager, UAC, Vista validation testing, and more.

Support the Latest Microsoft Technologies
Including .NET Framework 3.5, IIS 7.0, SQL Server 2005, Windows Server 2008, and Direct X 9.0c.

Install Software on Any Device

Extend installations to configure database servers, Web services, mobile devices, and more.

What's New in InstallShield 2009

Includes new support for MSI 4.5, Visual Studio 2008, managed-code custom actions, installation chaining, Hebrew and Arabic text, and much more!

NEW! InstallAnywhere™ 2009

Install Software on Multiple Platforms with One Installation Project

InstallAnywhere gives software developers a quick and easy way to author professional installations for Solaris, HP-UX, AIX, Linux, i5/OS, Mac OS X, Windows, and more.

One Project Covers Every Platform

Simplify development by creating a single installation project that works for multiple platforms.

Cut Software Development Time

Get products to market faster by creating reliable installations in minutes.

Impress End Users with Customised Installations

Impress your end users with a professional, branded installation experience.

Lower QA and Support Costs

Cut end-user support costs by significantly improving installation success rates.

One Installation for 31 Languages

Create a single installation that automatically translates setup text into 31 languages.

NEW! AdminStudio® 9.0

How IT Prepares Reliable MSI and Virtual Packages for Error-Free Deployment

AdminStudio makes it easy for IT to prepare reliable MSI and virtual packages for deployment. It has automated tools that speed software through the packaging process.

Cut Packaging Time by 70%

Automated tools help you get applications to end users up to 70% faster.

Cut Deployment Costs with Virtual Applications

AdminStudio automatically converts your MSIs to virtual Citrix® XenApp™, VMware® ThinApp™*, or Microsoft® App-V packages. No repackaging needed.

Migrate MSIs to Windows Vista Automatically

AdminStudio can proactively determine which applications are good candidates for migrating to Windows Vista without a second round of repackaging.

Works with Any Deployment Solution

AdminStudio supports leading deployment tools such as Microsoft® Configuration Manager, Novell® ZENworks®, LANDesk®, and much more.

* Requires separate purchase of VMware ThinApp

Acresso Software

InstallAnywhere 2009 Enterprise Edition

Create one installation for multiple platforms and languages.

- Customize look and feel with your own graphics and animations
- Run your installations in silent, console or full graphical mode
- Installations have built-in logic to detect what's installed & react accordingly

InstallAnywhere

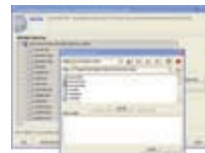

Create professional installations for Solaris, HP-UX, AIX, Linux, i5/OS, Mac OS X and Windows.

InstallAnywhere Enterprise Edition is designed to install any kind of software - desktop, Enterprise, or multi-tiered Web services - onto any platform and to configure those applications for optimal performance. Whether you're creating applications written in Java, C++, PERL, or C#, or deploying EJBs or .NET Web services, all of the installation details are handled automatically. It simplifies complex installations and provides maximum developer customization, along with extensive user interaction, client/server features and localization for 31 languages.

InstallAnywhere Enterprise Edition saves you significant time and effort by helping you create a single installation project that works for each of the platforms you target. The included

Project Wizard walks you through the simple task of building your installation project. Then simply check off the platforms you wish to target and InstallAnywhere does the rest. It's that easy. It makes installing and running multiplatform software as easy as installing and running platform-specific software.

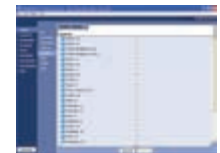

InstallAnywhere's intuitive and well designed integrated development interface allows you to build installations quickly and efficiently. You can create a basic installation with the six-step Project Wizard or use the Advanced Designer IDE's powerful graphical interface to build customized installations that control every facet of the deployment process. Give your installations a superior look and feel

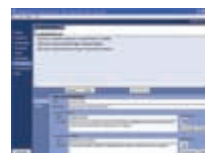

Project Wizard
Takes developers through the simple steps to build an installer.

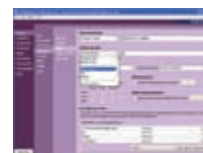

Advanced Designer
Gives greater precision, enabling developers to access all the powerful features of InstallAnywhere.

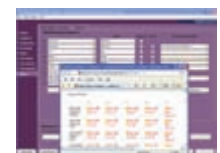

Localization
Build installers for up to 31 different languages.

Pre and Post Install and Uninstall Tasks
The Install and Uninstall tasks all follow the same organization and have the same options.

Extensive Platform Support
Supports platform-specific installation destinations (Windows directory, /usr/local/bin, Mac OS X Dock, etc.).

One Installation Project for all Platforms
Saves time and effort by creating a single project that works for each of the platforms you target.

with features such as: a Swing-based UI with panel customization and branding capabilities; installations that automatically assume the look and feel of the target platform; automatic installation label generation; GIF and JPEG image support; a preview of all aspects of GUI installation at authoring time and a complete graphic library.

InstallAnywhere Enterprise Edition supports platform-specific installation destinations (Windows directory, /usr/local/bin, Mac OS X Dock, etc.), is compliant with the requirements of the "Designed for Windows XP and Vista" and "Built for Mac OS X" certifications, and integrates seamlessly with Linux RPM and the Windows Service manager. It also provides the ability to run installations in silent, console, or full graphical mode, according to the desire of the developer and the needs of the system.

InstallAnywhere Enterprise Edition's IDE is available in localized language versions. Developers who speak English, French, German, and Japanese can author multiplatform installations using their native language. These installations support the full range of platforms and support all 31 target installation languages.

InstallAnywhere Enterprise Edition comes with pre-translated installation dialog panels in 31 languages, making it easy to localize your installations. It supports the following languages: Arabic, Basque, Brazilian Portuguese, Catalan, Simplified Chinese, Traditional Chinese, Czech, Danish, Dutch, English, Finnish, French, Canadian French, German, Greek, Hebrew, Hungarian, Indonesian, Italian, Japanese, Korean, Norwegian, Polish, Portuguese, Russian, Slovak, Slovenian, Spanish, Swedish, Thai and Turkish.

BUILD THE AMAZING WEB

with Studio Enterprise

STUDIO FOR SILVERLIGHT
STOCK PORTFOLIO DEMO

STUDIO FOR SILVERLIGHT
LIVE DEMO MICROSITE

Studio for Silverlight

Produce limitless RIAs: state-of-the-art Silverlight controls

- **Most complete suite:** with 30+ controls you'll find the Silverlight 2 control you need
- **Developers get ahead of the pack with access to the best resources:** 15+ samples with source code for quick learning
- **Runs everywhere and does everything:** no need to worry about HTML or JavaScript compatibility on the Web

Studio for ASP.NET

AJAX-enabled controls for desktop-like experiences on the Web

- **Lightweight, high-performance Web apps:** 3x smaller footprint, 10x faster performance
- **Guaranteed compatibility:** Web apps perform across all popular browsers
- **Code-free styling & animation:** dozens of built-in visual styles & animation effects

Studio for iPhone

Build Web apps that look and feel like the native UI of the iPhone and iPod touch

- **Reach out to on-the-go mobile end-users:** mimic the sleek look and feel of the native UI of the iPhone and iPod touch
- **Familiar ASP.NET-based controls:** develop without the hassle of learning a new technology

Studio Enterprise delivers exactly what you need to produce next-generation UIs for the Web.

ComponentOne

ComponentOne Studio for WPF 2009 v1

Deliver rich interfaces with designer-inspired WPF controls

- Everything from advanced data binding to rich data visualizations are included in grids, schedules, charts and reports
- Fully compatible with XAML Browser Application (XBAP) deployment

ComponentOne Studio for WPF

A collection of components for all aspects of Windows Presentation Foundation application development.

ComponentOne Studio for WPF is a set of Enterprise quality WPF components that offer rich data visualizations. ComponentOne Studio for WPF includes the following components: Chart for WPF, Grid for WPF, Reports for WPF and Schedule for WPF.

With Charts for WPF it's easy to get the chart type you need. By setting one simple property you can create any chart from; line, to bar, to pie. Charts for WPF also lets you achieve artistically rendered charts using visual effects. You can choose from one of the many color schemes for applying color to the data series or data points and you can enhance the 3D chart element's appearance by applying ambient, directional, point and spot lighting.

More than 10 Built-in themes, Office 2003, 2007, Windows Vista, custom, etc, help you create polished charts easily.

With Grid for WPF you can easily change the appearance of your grid with multiple built-in data views (carousel, card view, tabular, horizontal, custom view, etc.). You can easily group, sort, filter, resize and reorder columns at run time through simple drag and drop operations. Also, users can easily create and resize Microsoft Excel-like horizontal and vertical splits that you can customize at design time.

Reports for WPF provides advanced functionality with 3D charts, dynamic controls, interactive components and easy databinding. It also includes

Promote Collaboration using XAML-based Controls
ComponentOne WPF controls are built with XAML to promote collaboration in your team.

XBAP support
Compatible with the XBAP deployment capabilities of WPF which allows publishing to the client's browser.

Animate Your Data, Enhance Your User Experience
Give your application rich Data Visualizations with little effort.

Reporting for WPF
Provides 3D Charts, dynamic controls, interactive components, and easy databinding.

Add Themes to your Applications
All WPF components are packaged with Themes based on the latest trends in UI design. Including Vista, Office, OS-X, etc.

Grid for WPF
Provides all the capabilities of a DataGrid, but also adds new data views including 3D Carousel and Card View.

standard reporting capabilities like printing, previewing and exporting. It lets you generate Microsoft Access-style, data-based banded reports that can be rendered into a FixedDocumentSequence, directly to a printer or exported to various formats (including XPS, HTML, PDF, and text).

Reports for WPF also provides a powerful document-oriented object model which makes documents interactive by adding hyperlinks, link targets, TOC and supports rich text & graphics formatting.

Schedule for WPF includes three calendar controls that allow users to select a specific date which can be linked to a schedule. It also mimics Microsoft Outlook-style scheduling (one-time, all day, or recurring appointments with reminders, labels

and availability status). Schedule for WPF includes four built-in data views: Day View, Work Week View, Week View, and Month View.

All the components in ComponentOne Studio for WPF are packaged with new and improved themes based on the latest trends in UI design including: Vista, Office 2007, OS-X and more.

ComponentOne WPF controls are built with XAML to promote collaboration in your team and fit seamlessly into your developer/designer workflow. The WPF components are fully compatible with the XBAP deployment capabilities of Windows Presentation Foundation. XBAP deployment allows publishing to your client's (supported) browser for a full featured application without a Windows installation.

Developer Express

DXperience v2009 vol 1

All Developer Express ASP.NET, WinForms, WPF & Silverlight components & tools.

- User Interface functionality for ActiveX, WinForms, ASP.NET, WPF & Silverlight
- Includes an ASP.NET-AJAX control that displays digital dashboards in your Web based applications

DXperience

All the Visual Studio .NET component suites, libraries and IDE tools produced by Developer Express in one package.

DXperience includes all Developer Express products engineered for Visual Studio and the .NET Framework. With this subscription, you receive all key technologies by Developer Express including IDE productivity tools, business application frameworks, and components for Windows Forms, ASP.NET, WPF, Silverlight and ActiveX. In addition to individual tools, you receive complete source code for Windows Forms and ASP.NET components.

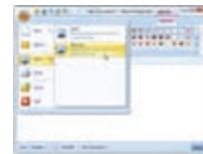

With the Universal subscription, you also receive eXpressApp Framework which is an instrument for creating business applications quickly and easily.

WPF products include: **DXGrid for WPF** - fast server-side data processing and complete support for templates and styles, **DXCharts for WPF** - clear & compact XAML syntax and element customization via templates, **DXCarousel for WPF** - stunning navigation and data browsing, **DXNavBar for WPF** - easy and intuitive navigation.

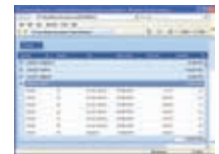

Silverlight products include: **AgDataGrid** - fast data manipulations and rich end user experiences, **AgRichEdit** - Word like text editing features, **AgMenu** - static menus, toolbars and context menus etc,

XtraBars Suite Ribbon Control and Tabbed MDI interface
With the XtraBars Suite you can easily build Ribbons from scratch.

XtraBars Suite
You can create application menu, galleries and contextual tabs in ribbons.

DXGrid for WPF
Supports both tabular and card display formats and provides facilities for the end-user to sort and group data.

AgRichEdit for Silverlight
Allows you to introduce Microsoft Word like text editing features into your next Silverlight application with ease.

XtraReports End-User Designer
The XtraReports Suite features a fully functional End-User Designer.

XtraReports Master-Detail Report
With the XtraReports Suite, you can easily build banded reports and even Master-Detail reports.

AgLayoutControl - layout management for Silverlight.

Windows Forms products include: **XtraGrid Suite** - a grid control with four data layout options from a simple table to banded multi-line row layout and card views, **XtraScheduler Suite** - enables you to incorporate the UI found in Office Calendar within your applications, **XtraPivotGrid Suite** - a data analysis, mining and visual reporting solution, **XtraGauges** - linear, circular, digital and state indicator gauge types, **XtraEditors** a library of over 20 editors that can be used both standalone or embedded, **XtraWizard** - easily generate multi-step wizard dialogs that fully conform to Wizard 97 or Wizard Aero standards.

ASP.NET products include: **ASPxGridView and Editors Library** - a robust grid and data editors library for ASP.NET, **ASPxPivotGrid Suite** - a multi-dimensional analysis component, **ASPxNavBar Suite** - Web navigation bar with full AJAX support, **ASPxMenu Suite** - an extremely lightweight, customizable main and context menu and more.

Also included in Universal and Enterprise Editions: CodeRush, Refactor! Pro, eXpress Persistent Objects and six ActiveX products (grids, trees, navigation, bars, editors, printing etc.). Priority technical support is also included with updates and upgrades for 1 year.

FarPoint Technologies

Farpoint Spread for Windows Forms V4.0

Allow developers to easily present, edit and update their tabular data.

- Features Outlook style grouping, right-to-left support, export to HTML/XML and more
- New cell types include list box, multi-column combobox and more

Farpoint Spread for Windows Forms

Easily present, edit and update tabular data.

Farpoint Spread for Windows Forms is a comprehensive spreadsheet component for Windows Forms applications that combines grid capabilities, spreadsheet functionality and includes the ability to bind to data sources. A single control can handle up to 2 billion sheets, each with up to 2 billion rows and 2 billion columns. Cross-sheet referencing allows calculations to make use of data and formulas on a variety of sheets. Styles and formatting can be applied at the sheet, row, column and cell level. You can control the appearance and the user interaction in a variety of ways. With most of the Spread's appearance and functionality based on underlying models, the developer has complete control over the component.

Farpoint Spread for Windows Forms can handle data from comma-delimited text

files as well as multiple spreadsheets from Microsoft Excel files. The contents of a sheet may be saved as a Microsoft Excel file or stream, text file, or as a Spread XML file. You can bind the control to a data set, such as data in a database, or to anything that the .NET Framework allows, such as an IList object. When you bind the component using the default settings, data from the data set is read into the columns and rows of the sheet to which you bind the data. Columns are associated with fields, and rows represent each record in the data set. Spread for Windows Forms can also automatically update the data set with the changes. You can allow part of your spreadsheet to be unbound and you can also bind to a range of cells.

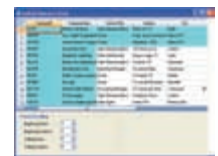

You can specify the way a user interacts with a cell, including how data is

Formulas
Spread includes over 300 built-in functions and gives you the ability to define your own.

Cell Types
Spread includes many different cell types including: barcode, button, checkbox, color picker, combobox, currency, date time and hyperlink.

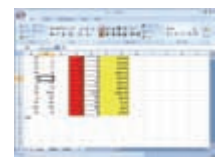

Frozen Rows and Columns
With Spread you can freeze both columns and rows at the end or beginning of the sheet.

Sorting
Spread allows the user to click on column headers to perform an alternating ascending/descending sort of the rows in that column.

Grouping
You can group rows or columns into outlines as you do in Excel.

Desktop Spreadsheet
Use Spread to create your own desktop spreadsheet application.

entered, displayed and validated by specifying the cell type. The cell type defines an editor control for the cell that handles data entry, a formatter control to handle how the data is interpreted, and a renderer control that handles how the data is displayed in the cell. Examples of cell types are check box cell, date-time cell or a simple text cell. Cell types can be set for individual cells, columns, rows, a range of cells or an entire sheet. You can have multiple sheets within a workbook. Each sheet is a separate spreadsheet and can have its own appearance and settings for user interaction. Each sheet has a unique name and sheet name tab for easy navigation between sheets. You can add, remove, copy, insert and hide sheets. You can freeze (make unscrollable) a number of either rows or columns or both in a sheet. You can freeze any number of top rows (called

leading rows) or any number of left-most columns (called leading columns). You can also freeze any number of the trailing bottom rows or trailing right-most columns.

Spread for Windows Forms' Calc Engine includes over 300 built-in functions, supports cross-sheet formula referencing and gives you the ability to define your own custom functions. With formulas, you can: specify a cell reference, use a circular reference, nest functions, recalculate and update formulas automatically, allow the user to enter formulas, create and use a custom name and custom function.

Formulas include: database, date and time, engineering, financial, logical, math and trigonometry, statistical and text.

HARDCORE REPORTS

ActiveReports for .NET helps you deliver hardcore reports on time, on budget, and with your sanity intact. You couldn't ask for more.

- Complete integration with Visual Studio .NET makes it a snap to create reports in a familiar environment.
- Flexible report controls like the chart, barcode, rich text box, and subreport controls provide the look needed.
- Versatile data binding makes it possible to use a variety of data sources in one report.
- Powerful exporting capability allows you to provide reports in the format needed.
- Royalty-free deployment eliminates extra costs for you and your customers.
- End-user report designer allows you to provide your end users with the reporting tools they need (Professional edition).
- HTTP handlers and the Web report server control make it easy to deploy and view server-based reports on the Web (Professional edition).

GrapeCity Data Dynamics

Data Dynamics Reports V1.5

Royalty-free reporting engine based on the Report Definition Language.

- Include lists, tables, charts, matrices and banded lists
- Supports ADO.NET DataSets, .NET Objects, SQL Server, Oracle, OLEDB, ODBC and XML data sources

Data Dynamics Reports

Royalty-free reporting toolkit based on the Report Definition Language (RDL).

Data Dynamics Reports is a royalty-free reporting engine based on the Report Definition Language (RDL). Written in fully managed Visual C# code, it integrates completely into the Visual Studio .NET IDE allowing developers to create and preview reports inside Visual Studio.

Documents created with Data Dynamics Reports can layout data using a combination of lists, tables, charts, matrices or banded lists in a layout-based report. Reports can be populated with data from .NET Objects, SQL Server, an ADO.NET DataSet, Oracle, OLEDB, ODBC or an XML data source. Each report can have multiple data sources and data sets associated with it. By using Data Dynamics Reports with DataSet, Object, or XML data providers report data can make use of existing relationships within your data. You no longer have to denormalize data in order to create reports from it.

Data Dynamics Reports has true drilldown support, that allows report authors to hide data conditionally in the report and expose it when requested. This is done by setting a report item to be hidden and then setting its ToggleItem property to the name of a textbox or image report item in the report. Data Dynamics Reports also features a matrix data region – sometimes called a crosstab or pivot table. This data region consists of a grid that adds columns and rows for distinct sets of field values in the data set.

With Data Dynamics Reports you can create master reports that allow developers (or the end-user) to define a template that can then be filled in by other reports. The formatted text report item allows the report author to include XHTML + CSS content into their reports.

Report Definition Language (RDL) already defines several chart types

Master Reports
Master Reports allow developers (or the end-user) to define a template that can then be filled in by other reports.

Barcode Report Item
The included Barcode report item supports more than 20 of the most popular barcode symbologies.

Themes
Themes make it easier for all of the reports you create to have a common look.

Matrix (Crosstab)
Data Dynamics Reports also features a matrix data region sometimes called a crosstab or pivot table.

Rendering extensions available
Formats include: image (EMF, JPEG, GIF, BMP, TIFF and PNG), HTML, Word, PDF and XML.

Dashboards
Data Dynamics Reports present a clean interface to information workers.

(column, bar, area, line, scatter, bubble), but Data Dynamics Reports provides 10 more: Gantt, candlestick, hi-lo, kagi, hi-lo open-close, three-line-break, renko, point and figure, pyramid, and funnel.

With Data Dynamics Reports, rendering extensions are more than just an export, they render the report using the underlying layout of the report. This means that each report item can be rendered in a way that makes sense for that rendering extension. Rendering extensions available include: images (EMF, JPEG, GIF, BMP, TIFF, PNG), XML, PDF (encryption and password protection options available), HTML (XHTML 1.1 and CSS 2.1) and Word.

Data Dynamics Reports supports themes which make it easier for all of the reports you create to have a common look. Themes allow you to define a set of colors, two sets of fonts, and package any common images that may be used on many reports. The theme file format is also easy to

understand making it simple to create new themes and replace existing ones.

Data Dynamics Reports makes it easy to create informative digital dashboards that convey information to decision makers in a timely manner. With Data bar, color scales, icon sets, and range bars you can explain your data at a glance. Data Dynamics Reports also comes with a Barcode report item that supports 23 of the most popular barcode symbologies, from Code39 to UPC, PostNET and Japanese Postal etc.

Data Dynamics Reports includes several controls that you can ship with your applications. A UserDesignerControl allows you to host the report designer within your own Windows Forms application, this lets your end users design reports.

Data Dynamics Reports also includes two full featured viewer controls, one for Windows Forms and another for ASP.NET.

Data Dynamics

Analysis

Your Data is a Hidden Treasure, Dive In

Data Dynamics Analysis

is the first interactive graphical analysis component for Windows Forms and ASP.NET applications. This tool facilitates real time data analysis and promotes the exploration of relational and multidimensional data sources with simple drag-and-drop operations. Developers can embed cutting edge data visualization functionality directly into any .NET application. Transform raw data into feature-rich charts and pivot tables delivering a powerful and user friendly experience.

Dive Into Your Data

Visually explore large sets of data and obtain new insights that help make informed business decisions.

Empower Your Users

Decision makers have direct access to information they need to answer questions.

Deliver Business Intelligence

Comprehensive chart displays reveal trends and give users a deep understanding of their data.

Data Dynamics

Reports

Go Ahead, Show Off

Data Dynamics Reports

created to handle reports, dashboards, invoices, and other documents. The feature rich package allows authors to focus on creating documents in the intuitive designer instead of writing code.

Dashboards, calendars, XHTML, mail merge, charts, tables, cross-tabs, free-form lists, data visualizations, and report parameters are just some of the features available right out of the box.

Excel/Word/PDF Exports

Take reports with you in any of the supported formats: send them out, print them out, or just analyze the numbers.

Dashboards

Dashboard centric controls make it easy to create dashboard, use the controls anywhere you need to examine numbers and trends at a glance.

XHTML and Mail Merge Support

The Formatted Text report item allows report authors to insert XHTML content into their reports and it has full support for mail merge functionality.

Data Visualizations

Graphical representations make it easy to understand data. Data visualizations create graphics based on your data. Those reading your documents can now easily spot the important numbers.

IBM Rational Software

IBM Rational ClearCase V71.0

Software asset management for medium to large projects.

- Sophisticated version control lets you manage files, directories and other development assets across the lifecycle
- Parallel development support including automatic branching & merging

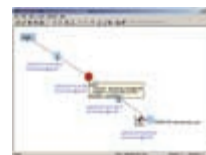

IBM Rational ClearCase

Manage software assets to help you deliver better applications.

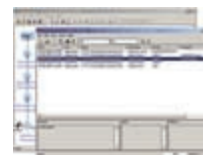

IBM Rational® ClearCase® software configuration management products enable you to effectively manage and control software assets to help you deliver better applications faster and at lower cost. It provides life cycle management and control of software development assets. With integrated version control, automated workspace management, parallel development support, baseline management, and build and release management, IBM Rational ClearCase provides the capabilities needed to create, update, build, deliver, reuse and maintain business-critical assets. IBM Rational ClearCase can help increase productivity through parallel development, reduced build/release cycle times, and increased

software reuse. Integration with leading IDEs including Rational Application Developer, WebSphere Studio, Microsoft Visual Studio .NET and the open source Eclipse framework further streamlines development. IBM Rational ClearCase also seamlessly integrates with IBM Rational ClearQuest for a complete software configuration management solution.

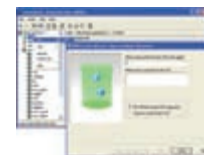

IBM Rational ClearCase supports heterogeneous environments and cross-platform development, enabling distributed team members to collaborate over different platforms. You can develop in virtually any development environment, including IBM System z, Microsoft Windows, Linux

Version Tree Browser
The Version Tree Browser provides a graphical display of the versions of an element, including any branches or UCM streams.

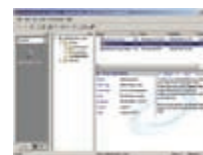

History Browser
The History Browser is a graphical user interface for viewing the event records of Rational ClearCase objects.

VOB
A VOB (Versioned Object Base) is the permanent data repository in which you store files, directories, and metadata.

Compare Versions
ClearCase Diff Merge enables you to compare 2 or more files, directories, or versions and graphically represent the differences.

ClearCase Explorer
Use Rational ClearCase Explorer to access files and directories under source control and to issue ClearCase commands.

Create Views
With the View Creation Wizard you can create a work area for contributing to a development project.

and UNIX environments. On the server side, your organization can choose from a variety of supported platforms to store software assets while you and your teammates continue to work in your preferred integrated development environments (IDEs).

By providing extensive support for parallel development, IBM Rational ClearCase enables developers to more easily resolve conflicts, reduce confusion and work on the same code base or release. Plus, with parallel development support, you can fund multiple projects simultaneously, and then determine how to release each project depending on when it's complete. Automatic file-branching functionality isolates specific changes or versions, allowing multiple developers on the same and

different teams to work independently from the same code base. Development and integration stream models define how and when developers deliver code changes. And proven merging and differencing capabilities accept uncontested changes and highlight conflicting changes for faster resolution.

IBM Rational ClearCase provides effective build auditing that can assist with your governance efforts. It helps streamline the edit-build-debug cycle and accurately reproduce software versions. It also provides the ability to generate a detailed software bill of materials, which can be used to automatically determine when built objects can be reused or shared by developers using multiple views.

Protect your applications with a complete, affordable and adaptable security solution for your business.

In today's business world, companies rely on an increasing number of web applications to collect and exchange sensitive data. More applications mean more places where you're vulnerable and knowing where your weaknesses are can be like finding a needle in a haystack. Unless you have IBM Appscan.

IBM Appscan is an automated solution that tests your web application security and then pinpoints your vulnerabilities. It can also help you manage the process of fixing them. With the threat of hackers always growing, IBM Appscan is designed to readily adapt to these ever-changing dangers - so you can be confident that you're totally secure and completely compliant.

IBM Appscan forms part of the IBM Rational range, which can provide you with complete, end-to-end lifecycle development solutions for all of your software. It makes your life easier and the development process run smoother than ever.

Protect your business. Don't let others find your weakness first.

Infragistics

NetAdvantage for .NET 2009 Volume 1

Create commercial class UI for Winforms, ASP.NET, WPF & Silverlight applications.

- Comprehensive User Interface control and component toolset for .NET
- The new xamCalendar and xamCalendarDropDown WPF controls bring Vista-experience to navigating through dates

NetAdvantage for .NET

Includes essential User Interface controls for Windows Forms, WPF, Silverlight and ASP.NET, plus application styling.

NetAdvantage for .NET is a presentation layer toolset for quickly and easily building and styling polished application UIs and delivering a great user experience, for WPF, Silverlight, Windows Forms, ASP.NET and Tablet PC. You can deliver user experiences consistent with Microsoft Office and Windows Vista, produce high performance Web applications and create hi-fidelity, cross-platform charts and gauges that instantly provide your audience with a clear understanding of key performance indicators. Designed with the user experience in mind, NetAdvantage for .NET user interface controls give you the ability to focus

on business logic while it takes care of the presentation. Use the modern look and feel of Windows Vista styles and navigation or emulate the Office 2003 and Office 2007 user experiences with predefined color tables and ribbon controls.

NetAdvantage for .NET has what you need to add no-touch AJAX to your Web site with a professionally polished UI. The product includes many Windows Forms and ASP.NET components: grids, charts, combos, desktop alerts, button calculator, dropdown, progress bar, scroll bar, tooltips, editors, gauge, listbar, listview, printing, scheduling,

NetAdvantage for ASP.NET
Gauges and Chart controls let you create an executive dashboard.

NetAdvantage for Windows Forms
Create Outlook style applications with integrated NetAdvantage for Windows Forms controls.

Create applications with Office 2007 Ribbon styling
Also includes grids with conditional formatting, trees, 3D charts, menus, etc.

PDF Export
You can export reports to PDF document displaying Gauges to visually summarize data.

xamDataGrid
Provides users with versatility when editing, sorting, grouping, and showing hierarchical data relationships.

Ribbon
Use NetAdvantage for .NET to create WPF applications with Ribbon interfaces.

spell checker, tabs, toolbars and trees. NetAdvantage for .NET also includes a Document Export Engine for PDF and XPS formats and provides Web crawler optimization, AJAX support and SharePoint integration.

NetAdvantage for .NET includes Silverlight Controls for Line of Business (LOB) Applications which enable you to include islands of richness into your existing Web-based applications, giving end-users an experience that goes beyond what can be accomplished with mere HTML. These controls are built from the ground-up for the Silverlight 2 platform and take full advantage of its incredible capabilities and help you to produce compelling and impactful Web 2.0 applications.

NetAdvantage for .NET includes next generation WPF controls which were designed from the start with an uncompromising attitude toward leveraging its cinematic graphics, rich styling, animation capabilities, and integrated UI virtualization. Embracing templates and exposing numerous styling points gives you complete command over the controls' appearance. A logical, friendly object model makes it easy to take advantage of the WPF platform's potential, whether you choose to do so through declarative UI (XAML) or code.

Multiple volume releases throughout the year continuously add valuable new features ensuring the tools available to you remain leading edge.

Software FX

Chart FX 7

Add interactive charts and images to your Web and Windows applications.

- Totally rewritten to take advantage of Visual Studio enhancements
- Smart Tag Wizard provides a powerful yet familiar interface
- Redesigned UI integrates into Smart Client and ASP.NET applications

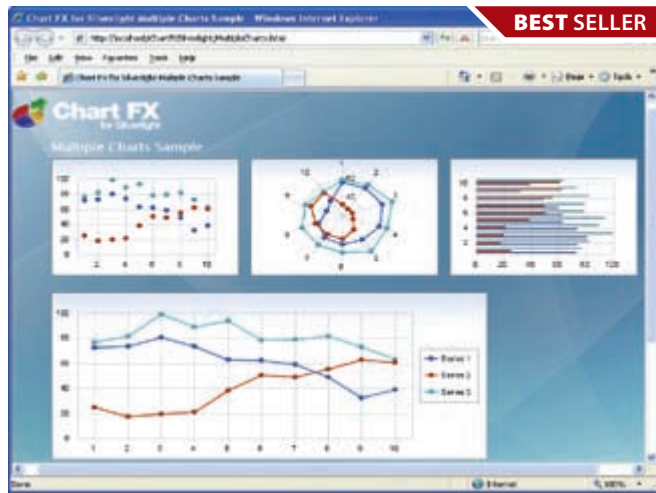

Chart FX 7

Chart FX integrates seamlessly into Visual Studio to provide developers with Enterprise level data visualization capabilities.

Chart FX takes full advantage of the .NET Framework and cutting-edge technologies such as AJAX to create visually-rich, lightweight and secure charts that will enhance your Enterprise application's display layer. Chart FX is compatible with Visual Studio Themes, any changes that you make to a Theme are extended to the Chart FX controls on the page. Developers can also add Chart FX functionality to their Silverlight-based Web applications.

Chart FX can bit-stream directly to a browser and includes a DHTML rendering engine that uses AJAX (Asynchronous JavaScript and XML) to produce chart images that allow full interactivity in Web applications. The

DHTML rendering engine automatically updates the chart with the new data without a complete page refresh, only updating the portion of the chart that changed. The charts are fully secure as there are no binary files to download. This allows end users to interact with charts in any browser on any platform, making your application available to a wider audience.

Chart FX supports a variety of data population methods including: passing data directly through the API, resultset binding, XML files, collections, arrays, arrays of arrays, text files and crosstab. It supports over 20 different chart types (bar, Gantt, area, line, step, curve, bubble, pie, doughnut, pyramid,

Chart types
Choose from over 20 different chart types including 3D bar, area, bar, bubble, financial, Gantt, line, pareto, pie, radar polar, etc.

Printing
Using the Printer Object, you will have control over margins, paper orientation, color or pattern printing, amongst others.

End User experience
The ChartFX toolbar, context sensitive menus and dialogs provide an easy way for the end user to change visual attributes.

Passing data
Chart FX supports passing data from databases and text files such as XML.

Multiple axes
Advanced features such as logarithmic scales, multiple axes as well as axis sections and panes are all included.

Selecting the chart's output
Chart FX supports a method called RenderToStream that allows the developer to select the type of desired output for your charts.

combination, scatter, financial, surface, contour, radar, polar, statistical, etc.) and includes customizable legends, ready-to-use color palettes, multiple and customizable axes, per-marker attributes, gridlines, background images and border objects.

Chart FX provides run-time data analysis tools for your end users; these include drill downs, tooltips, drag and drop axis configuration and highlighting. Among all these tools, highlighting is a feature that allows end users to position the mouse in any chart element allowing Chart FX to instantly dim out other elements in the chart. This feature allows end users to quickly detect trends and other important elements in the chart.

Chart FX provides developers with advanced charting features with minimal integration effort. Helpful tools like the Chart Wizard, tutorial & samples and a programmer's guide will assist you in creating visually impressive data visualization solutions with little time invested. Chart FX includes a comprehensive API and properties list allowing you to access complex functionality. It also makes full use of Visual Studio Smart Tags, and takes advantage of this infrastructure to build a fully functional Wizard that allows developers to quickly access Chart FX main features. This Smart Tag Wizard provides the basic datasource configuration option available to other controls in Visual Studio, so you can quickly create and/or connect to an existing database or dataset in your project.

Telerik

Telerik Premium Collection for .NET Q1 2009

Build rich Web/desktop user interfaces and design reports.

- Deliver feature-rich, standards-compliant Web applications
- Visually appealing WPF controls let you create engaging user experiences
- Includes 20+ UI controls that can be used in pure Silverlight applications

Telerik Premium Collection for .NET

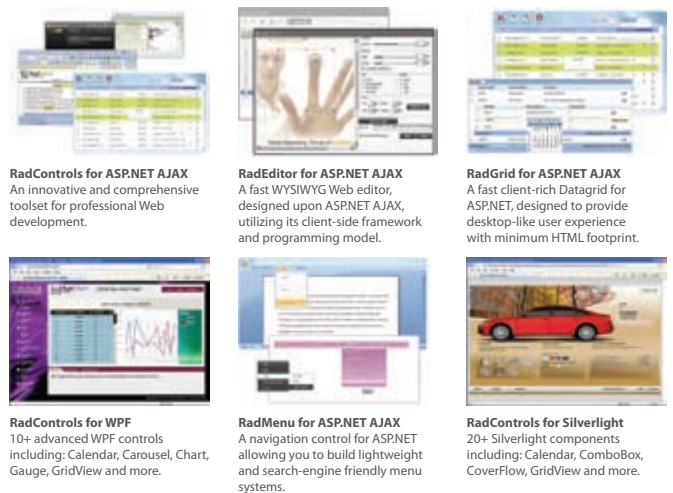

This comprehensive toolset allows you to rapidly build commercial-grade interfaces for Web and desktop applications and meet the diverse functional, design and usability requirements of your clients.

Telerik Premium Collection for .NET allows you to rapidly build commercial-grade interfaces for Web and desktop applications. ASP.NET AJAX, Silverlight and robust WinForms & WPF controls, as well as a flexible reporting engine are there to help you quickly create .NET applications on budget and on time. Telerik Premium Collection for .NET also includes Telerik OpenAccess ORM which lets you simplify the data access plumbing in desktop and Web applications.

What's included (ASP.NET AJAX): **RadCalendar** - lightweight calendar control with native AJAX support, multi-view mode, previous/next month and preview panes, **RadUpload** - AJAX-enabled multi-file upload control which uses a proprietary HttpModule

to minimize server memory usage, **RadGrid** - designed to eliminate the typical tradeoff associated with ASP.NET grid controls' rich functionality at the expense of weight and performance, **RadComboBox** - a component for building drop-down interfaces, **RadEditor** - a WYSIWYG rich-text editor that can replace any TextBox with an intuitive Word-like editor, Plus more ASP.NET AJAX components.

What's included (WinForms): **RadChart** - a lightweight, easy-to-use data presentation component that offers support for all popular chart types, **RadGridView** - outlook style grouping, filtering, sorting and column reordering, **RadCalendar** - a lightweight yet highly advanced date input control, **RadRibbonBar** - provides an easy-to-

RadControls for ASP.NET AJAX
An innovative and comprehensive toolset for professional Web development.

RadEditor for ASP.NET AJAX
A fast WYSIWYG Web editor, designed upon ASP.NET AJAX, utilizing its client-side framework and programming model.

RadGrid for ASP.NET AJAX
A fast client-rich Datagrid for ASP.NET, designed to provide desktop-like user experience with minimum HTML footprint.

RadControls for WPF
10+ advanced WPF controls including: Calendar, Carousel, Chart, Gauge, GridView and more.

RadMenu for ASP.NET AJAX
A navigation control for ASP.NET allowing you to build lightweight and search-engine friendly menu systems.

RadControls for Silverlight
20+ Silverlight components including: Calendar, ComboBox, CoverFlow, GridView and more.

design implementation of the Microsoft Office 2007 "ribbon" user interface, Plus more Windows Forms components.

What's included (WPF): **Calendar for WPF** - with databinding, different views (month, year, decade), culture awareness, flexible date navigation and transition animation. **GridView for WPF** - with sorting, grouping, seamless editing, filtering and display of hierarchical data. **Gauge for WPF** - a rich assortment of circular, linear and numeric gauge types with customization capabilities. Plus more WPF components.

What's included (Silverlight): **RadComboBox for Silverlight** - autocomplete, grid-like multiple columns, databinding, rich events, programming models and full customization capabilities. **RadGridView for Silverlight** - provides outstanding performance and a flexible hierarchy model. RadGridView for Silverlight packs all advanced grid

features such as grouping, sorting, filtering, rich in-place editing all in one place. Plus more Silverlight components.

Telerik Reporting is designed for developers who need a flexible, solid, royalty-free solution to easily design a wide range of reports. The product offers a convenient object model and solid Visual Studio integration which simplifies the generation of Windows, Web and PDF reports. For complete control over viewing reports, Telerik Reporting offers Windows Forms and Web Viewers, which guarantees that you will always get the same look and feel in your reports.

Telerik Premium Collection for .NET also includes comprehensive learning resources with more than 600 demos and 500+ pages of courseware materials and documentation - all available to advance your learning.

Actipro SyntaxEditor for WinForms

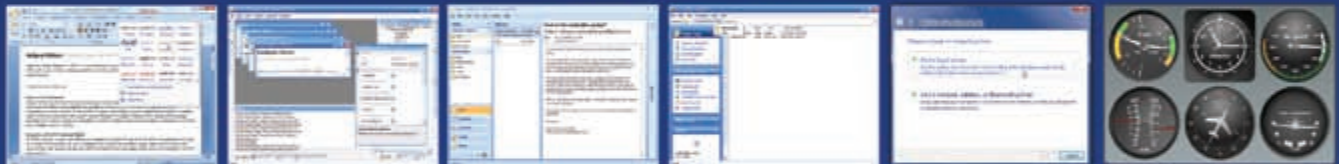

The ultimate syntax-highlighting editor control for .NET

- ◆ Mimics the Visual Studio code editor
 - ◆ Create custom language definitions
 - ◆ Code outlining and word wrap
 - ◆ Indicators (breakpoints, squiggle lines)
 - ◆ IntelliPrompt member lists, code snippets, parameter & quick info tips
 - ◆ Over 100 stock editing commands
- Optional Language Add-ons**
- ◆ Advanced C#, VB and XML languages
 - ◆ Automated IntelliPrompt & validation
 - ◆ Document outlining & auto-complete

Actipro WPF Studio

Jumpstart your WPF application's UI with over 45 controls

Bundled suite includes all Actipro WPF controls at one low price:

- ◆ Ribbon - Office 2007-like UI that meets all Microsoft requirements
- ◆ Docking & MDI - Docking windows, multiple document interface
- ◆ Navigation - Navigation and explorer bars, breadcrumbs
- ◆ PropertyGrid - Blend and VS-like property grid
- ◆ Wizard - Aero wizard and wizard 97 dialogs
- ◆ Gauge - Circular, linear, and digital gauges
- ◆ Bar Code - Vector bar codes with many symbologies
- ◆ Shared Library - Date/time pickers, transitions, misc. controls
- ◆ 1 year of support & free upgrades

Actipro Software

Actipro SyntaxEditor V4.0

Powerful code editing control with VS.NET style productivity enhancements.

Actipro SyntaxEditor

Editing C# code
Edit C# code using automated IntelliPrompt for parameter information.

Editing VB code
Edit VB code using automated IntelliPrompt for member lists.

Editing an XML SyntaxEditor language definition file
SyntaxEditor can edit an XML SyntaxEditor language definition file based on an XSD.

- Develop and distribute custom language definitions with your applications
- Supports language merging e.g. HTML calling CSS, VBScript, etc.
- Perform semantic parsing operations in a separate worker thread

Actipro SyntaxEditor was designed to handle advanced language parsing and processing, with phases for performing lexical parsing, semantic parsing (in a worker thread), and automatic outlining. Custom language definitions can be developed and distributed with your applications. SyntaxEditor includes a complete parser generator that helps build

semantic parsers and construct ASTs (abstract syntax trees). Major code editing features of the control include: code outlining, undo redo, word wrap, split views, current line and bracket highlights, virtual space, block selection, macro recording/playback, indicators, extensible rendering, IntelliPrompt code snippets, member lists, smart tags and more.

Aspose

Aspose.Total .NET Q1 2009

Create, manage and convert many popular document formats.

Aspose.Total

Aspose.Cells
Includes Aspose.Cells which lets you create and manage Excel spreadsheets without requiring Microsoft Excel.

Aspose.Words
Includes Aspose.Words which lets you read, modify and write Word documents without utilizing Microsoft Word.

Aspose.Pdf
Includes Aspose.Pdf to create PDF documents without utilizing Adobe Acrobat.

- Supports Word, Excel, PowerPoint, Project, PDF and Flash file formats
- Demos written in C#, VB.NET and Java highlight the best practices for implementing many common tasks

Aspose.Total offers every component that Aspose has available as well as all new components released during the annual subscription. Aspose.Total is available in three editions: .NET, Java and Reporting Services. It includes a set of components that support the most common document formats like MicroSoft Word, Excel, PowerPoint, Project, PDF, RTF, CSV and

tab delimited documents allowing developers to create, manage and convert one format to another.

Aspose.Total also contains components for charting, email, spell checking, barcode creation, ad hoc query generation, recurrence patterns and workflow.

Aspose.Total for Java

Aspose.Total for SSRS

Aspose.Total for .NET

With Aspose file management components developers can create applications which can open, create, modify, convert and save some of the most popular file formats in business, including: Word Documents, Excel Spreadsheets, PowerPoint Presentations, PDF Documents, Flash Presentations and Project Files. In addition, Aspose also offers an excellent line of products for data visualization including Aspose.Chart and Aspose.Grid, as well as components for spell checking, recurrence patterns, network protocols, barcode management and ad-hoc query generation.

All Aspose products can be purchased individually or in one complete suite, Aspose.Total. There are three separate Aspose.Total suites to accommodate the platform of your choice; .NET, SSRS and Java. Download your free evaluation copy today at <http://www.componentsource.com/features/aspose>

 **ASPOSE**
The .NET & Java Component Publisher™

Contour Business Intelligence

Query | Interactive Reporting | Data Analysis | Information Delivery

ContourCube

"Add Business Intelligence functionality to your applications"

ContourCube brings embeddable interactive reporting, data analysis and information delivery technology to Windows and Web based business and statistical solutions. It lets user interact with data; slice and dice, pivot, drill down and roll up; with sub-second response times and without additional OLAP server.

ContourCube offers a rich palette of business-oriented functions, powerful and easy formula language, and a range of new reporting techniques with innovative approach to report distribution.

Contour Publisher

"A powerful and easy-to-use tool for automatic refreshing and delivery of reports"

Contour Publisher is designed to help engineers and managers save time on running queries and updating reports. It can instantly load pre-built reports, feeding these with recent data from your database.

Contour Publisher automatically accesses databases, builds new or updates existing reports in Microcube, HTML, Excel, or Word formats, according to the scripts or templates.

Contour Reporter

"An easy-to-use application for interactive reporting and data analysis"

Contour Reporter allows executives and managers quick access to business intelligence reports and increases productivity through interactive sales reports, stock, marketing, budget, and accounting analysis. Enterprises and banks easily access corporate reports with **Contour Reporter**.

Governmental organizations, statistical agencies, consulting companies use **Contour Reporter** for publishing corporate performance indicators for their departments and the general public.

Codejock Software

Codejock Xtreme Suite Professional 2009

Create Office XP - 2007 and Visual Studio .NET style GUI elements.

Codejock Xtreme Suite Professional

Office Style Controls
Complete set of Office controls including shortcut bar and report grid.

Visual Studio .NET Docking
Popular design and visual styles are available including Visual Studio .NET style docking stickers.

Enhanced Docking Logic
Sophisticated docking algorithms provide endless layouts and possibilities for presenting data and organizing desktops.

- Xtreme Command Bars features an Office 2007 style ribbon bar
- Easily theme your application with SkinFramework for .NET
- Includes Vista style task dialogs

Codejock Xtreme Suite Professional provides Windows developers with a sophisticated set of components to give your application a professional, modern appearance. Codejock Xtreme Suite Professional combines eight components, Xtreme CommandBars, Xtreme Docking Pane, Xtreme SkinFramework, Xtreme Property Grid, Xtreme Report Control, Xtreme

Calendar, Xtreme ShortcutBar and Xtreme Task Panel. With Xtreme Suite Professional you can create Enterprise class applications that incorporate a full set of highly customizable user interface components that include Office style toolbars and menus. Several popular visual styles are included such as Office XP, Office 2003, Office 2007 and Visual Studio .NET.

Contour Components

ContourCube V4.0

Interactive reporting, data analysis and reports distribution.

ContourCube

Hierarchy Objects
A hierarchy object unites multiple fields with their relative positions. You can drag and drop the entire hierarchy as a single dimension.

Export Reports to Excel
ContourCube exports to CSV, HTML, PDF and MS Excel

Dynamic Data Filtering
Dynamic data filtering, pivot, drill-down and roll-up are all features offered by ContourCube.

- Comprises many popular business and statistical algorithms
- Supports fast direct data loading from multiple sources
- Includes XP, Classic and Flat appearance styles with text wrapping

ContourCube is a high-performance OLAP component for rapid development of Internet, client-server and desktop business intelligence applications. It provides a highly dynamic interface for interactive data analysis, sophisticated analytical, statistical, reporting and graphing features. ContourCube can get data from any data source via ADO, BDE, ODBC or an unbound data source; just drop it onto a form within your project, link it to your data and get the benefits of OLAP. ContourCube performs OLAP operations on hundreds of thousands

of records without an OLAP server. It allows end users to perform OLAP and statistical analyses using current data from any relational database. You can build and print reports interactively - simply with a click and drag & drop (with sub-second response times), dynamically interact with data: move rows and columns, filter data, drill-down, roll-up, pivot table and get all possible reports from one dataset. ContourCube makes millions of calculations simultaneously and shows new subtotals and totals instantly.

Internet Components for Software Developers

powerTCP for ActiveX and .NET

PowerTCP components are used by thousands of developers and companies throughout the world to increase productivity and shorten time-to-market.

PowerTCP for .NET components are compatible with all .NET Framework versions 1.x, 2.0, and 3.5. PowerTCP for ActiveX components provide legacy platform support, stability and longevity.

With detailed documentation, hundreds of comprehensive sample applications for Windows, ASP, and ASP.NET, and an expert in-house support staff, Dart provides professional assistance from concept to completion.

Email Validation, Secure FTP, Secure Mail, SSH, SFTP, Telnet, Emulation, SSL Sockets, Server Tool, Web Tool, Winsock, Ping, and Zip Compression

powerSNMP for ActiveX and .NET

powerSNMP for .NET

Create custom SNMP Manager, Trap and Agent applications with a set of native .NET classes. Full support for SNMPv1, SNMPv2, SNMPv3 and ASN.1 standards.

powerSNMP for ActiveX

Create custom SNMP Manager, Trap and Agent applications for monitoring and controlling network devices. Full support for SNMPv1, SNMPv2 and ASN.1 standards.

powerWEB for ASP.NET

powerWEB File Upload

Interactive, browser-based file upload with progress bars, stream integration, UI customization, multi-file uploads, low server overhead, and more!

powerWEB LiveControls

An advanced and efficient platform for developing responsive, AJAX-enabled ASP.NET applications. Rapidly develop interfaces with 20 server controls or take advantage of rich client and server APIs for custom client-server communications.

powerWEB Zoom

Provides cross-browser image panning and zooming without plug-ins! Place high-resolution, interactive images in your website and Zoom handles image delivery on-demand.

powerWEB TextBox

Incredibly flexible and customizable WYSIWYG HTML editor. Perfect for content management and distributed editing.

PARTNER

Dart Communications

PowerSNMP for .NET V1.2

Manage, monitor and control network devices from your .NET applications.

PowerSNMP for .NET

- Agent**
You can create an application with common SNMP agent functions such as responding to SNMP queries.
- Generate MIB Classes**
Generate class code for MIBs. This functionality is also built into the Manager and Agent components.
- Trap Catching**
Create NT services and control them via the Windows services control panel.

- Messages can be constructed using no security, authentication only, or authentication and privacy with SNMPv3
- A MIB compiler dynamically loads MIB files at runtime

PowerSNMP for .NET is a family of .NET classes and components used to manage network devices and remote management information. Full support for SNMPv1, SNMPv2, SNMPv3 and ASN.1 standards provide interoperability with Enterprise devices. The Manager and Agent components provide for message transport and a suite of supporting

classes provide MIB information, encoding & decoding and encryption & decryption. MIB files can be parsed and imported into C# and Visual Basic projects to provide full intellisense support.

A MIB compiler dynamically loads MIB files at runtime to generate new classes and objects on demand.

ACHIEVE A HIGHER STATE OF DATA VISUALIZATION

To master the art of data visualization, you must seek out the leader. For almost two decades, Software FX has risen above all others by bringing top-of-the-line data visualization tools to enterprise developers working with diverse markets, platforms and environments. This wisdom has evolved into a vast body of products, including a data presentation tool that provides a best-of-breed solution for Windows developers seeking enterprise quality and performance, as well as a professional IT monitoring solution offering incredible features for reporting and monitoring data. For a world of data visualization products that can raise your work to a higher level, depend on the source that's clearly on top.

Our most popular product, **Chart FX** provides charts, gauges and maps with additional vertical visualization functionality for business intelligence (OLAP), geographic data, financial technical analysis, and statistical studies and formulas. Recognized as the innovator and leader of the charting component category for the past 15 years, Chart FX delivers incomparable gallery options, aesthetics and data analysis features.

Grid FX was specifically designed for visual studio developers to take advantage of a powerful design-time experience, integrated Chart FX functionality right in the box, and AJAX to provide robust, run-time functionality in ASP.net applications. The dynamic aesthetic features for data presentation and analysis allow simple adaptation to an existing application or to specific corporate branding guidelines.

PowerGadgets puts powerful IT monitoring on your desktop and in your data sidebar. IT professionals can now create gadgets that consume data from WMI, Exchange, SQL Server and even the Windows Registry. PowerGadgets does not require any development environments, servers or browsers to run real-time gadget components such as charts, gauges and maps.

SoftwareFX

Data visualization for every need, every platform

How Flexible is Your Licensing Solution?

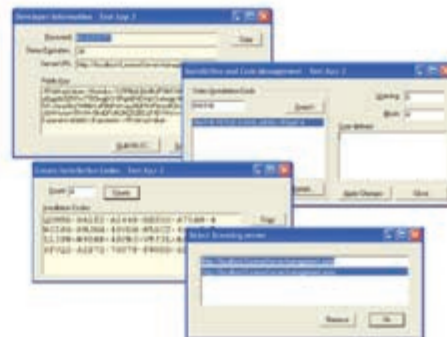

The licensing solution you choose should adapt to your licensing needs - you should not have to adapt your needs to the licensing solution.

It should integrate easily into your backend systems and infrastructure, and be flexible enough to allow for changes to the licensing model as your market grows.

The Desaware Licensing System

- Supports demos, time trials and subscriptions.
- Ties into the database of your choice, or use the automatic defaults.
- No royalty or additional fees. License two products or two hundred.
- Detailed instructions on hosting the server software at your site or a low cost hosting service. You are always in control.
- Fully customize system identification and comparison.
- Use the standard .NET component licensing framework or bypass it completely.
- Uses no secret or hidden files.
- Implement tight activation based security or less stringent security scenarios.
- Watch our website for Windows Mobile and concurrent licensing extensions.

Visit www.Desaware.com to download your copy of "10 Things to Consider When Purchasing A Software Licensing Solution".

DEVPIA

DEXUpload .NET Pro V3.6

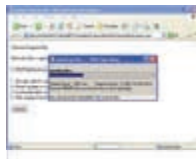

Add the ability to upload files to your Web applications.

DEXUpload .NET Pro

Single and Multiple Uploads
DEXUpload.NET allows you to upload single and multiple files.

Upload Progress
You can display a custom progress bar during the upload process.

Watermarking and Image Format
You can upload and watermark images and change image formats on the fly.

- Allows uploads of upto 2GB files
- Use of optimized parsing algorithm makes uploading speed even faster
- Able to upload files to a database via a BLOB (Binary Large Object)

DEXUpload.NET Pro is a component that supports file downloads and uploads between a Web browser and an IIS Web server. It observes Internet standards (RFC 1867) and can be used in Microsoft ASP.NET.

DEXUpload .NET Pro is HTTP-based and uploads files from a Web browser to a Web server quickly and efficiently. It overcomes the limitations of ASP.NET uploading (inconsistency for high capacity file uploads, server overloads and safety, etc.). It is written in C# and provides you with improved upload speeds and stability. During

upload and download you can invoke a progress window automatically without installing any other software. The pop-up progress window shows you uploading speed, file size, uploaded file size and time remaining. It can also be customized by using progress objects.

DEXUpload .NET Pro also allows you to watermark uploaded images and convert uploaded images to thumbnails. It supports various file conversion formats (BMP, JPG, GIF etc.) and it provides detailed information about image files.

Dundas Software

Dundas Chart for ASP.NET Enterprise V6.2

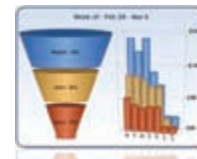

Fully managed charting for your ASP.NET projects.

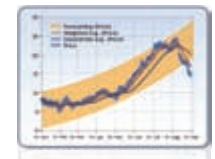

Dundas Chart for ASP.NET Enterprise Edition

Stock Chart
You can create stock charts, with multiple chart areas using Bollinger Bands.

Combination Chart
It is easy to create combination charts.

Point Chart
Point Chart, using Weighted Average and Exponential Average Formulas.

- Supports AJAX based zooming and scrolling
- Add visual appeal with advanced Flash or SVG animation effects
- Provides a wide range of standard and advanced chart types

Dundas Chart for ASP.NET Enterprise Edition is a fully managed charting component designed for ASP.NET development.

Included is support for all standard and many advanced chart types, drilldown functionality, full Visual Studio Integrated help, a variety of different image formats and intuitive

samples and examples to speed up development time. Graphics take full advantage of GDI+ and the use of transparency, anti-aliasing, gradients and more. Dundas Chart for ASP.NET Enterprise Edition includes many advanced features including: formula support, data grouping, empty data point handling, data filtering and highlighting.

Janus WinForms Controls Suite

Add powerful Outlook style interfaces to your applications

Janus GridEX for .NET

Janus GridEX is a control capable of working in bound fashion with ADD.NET or IList data sources. The control supports hierarchical display of data and permits you to create effective user interfaces similar to Microsoft Outlook®, while easing development and maintenance time. The functionality provided by the control allows you to display, format, edit, sort, group, filter, manipulate, summarize, preview and print your data. Standalone MaskEdit, MultiColumn Combo, and UpDown controls are also included.

Janus Ribbon & Command Manager Controls

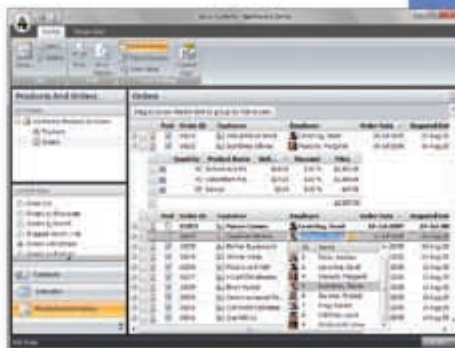

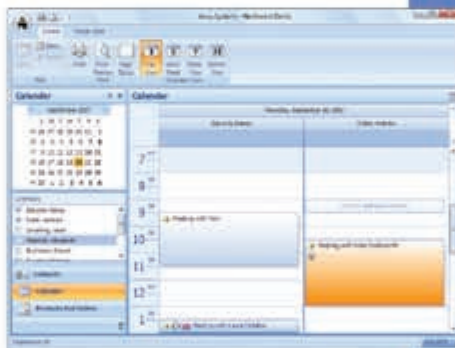

Janus Command Manager and new Ribbon controls are also included in the suite. These controls provide Windows developers with stylish menus and toolbars. The components permit advanced customization of the menus and toolbars of your applications. Use the built in VisualStyles in the controls to easily provide your applications with a look similar to Windows XP, Office 2000, Office XP, Office 2003 or 2007.

Janus Timeline Control for .NET

The Janus Timeline Control is ideal for displaying items in relation to time. Items in the control are arranged in chronological order from left to right on a time scale that can be divided from seconds to years. You can easily load, display, format, group, filter, edit and manipulate items with the functionality available in the control in both bound and unbound modes.

Janus Schedule for .NET

The Janus Schedule control can present appointments and related owners in different Views, representing Days, WorkWeeks, Weeks, and Months. The control also supports working with recurrent appointments. You can easily load, display, format, filter, edit, manipulate, preview, and print appointments with the functionality available in the control in both bound and unbound modes. A stand-alone Janus Calendar Combo Control, used to edit date and time values, is also included.

Windows Forms Controls

A suite of controls designed to provide powerful user interfaces for Microsoft .NET Smart Client applications patterned after Microsoft Outlook®. All of the controls in the suite are 100% C# managed controls designed to be used with Visual Studio® 2005.

Janus WinForms Controls Suite includes the following controls:

Janus GridEx for .NET
(Outlook Grid)

Janus Schedule for .NET
(Outlook Calendar View)

Janus Timeline for .NET
(Outlook Journal)

Janus ButtonBar for .NET
(Outlook Shortcut Bar)

Janus ExplorerBar for .NET
(Outlook Shortcut Bar)

Janus UI CommandManager
(Menus and Toolbars)

Janus PanelManager
(Outlook / Visual Studio .NET panes)

Janus TabControl
(Tab Control)

NEW!

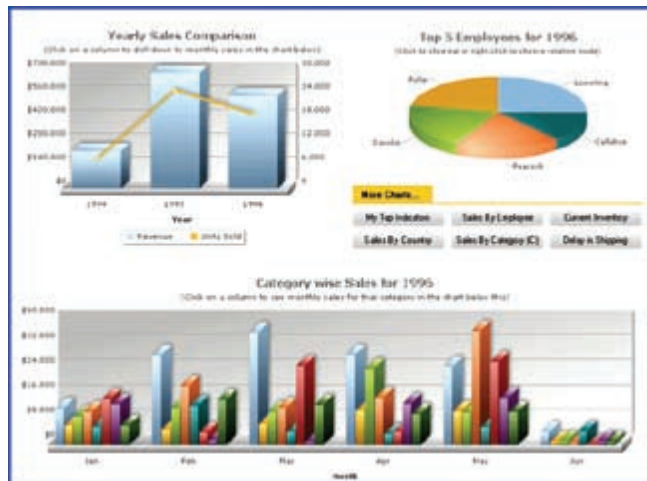

All controls now feature Office 2007 look & feel plus Ribbon Bar

InfoSoft Global

FusionCharts V3.0

Interactive and animated charts for ASP and ASP.NET applications.

FusionCharts

Flash Charts
FusionCharts is a flash charting component that can be used to render data-driven animated charts.

Variety of 2D/3D chart types
FusionCharts offers a variety of customizable 2D/3D charts like line, area, bar, column, pie, doughnut (donut), etc.

Cross Browser
FusionCharts is a cross-browser and cross-platform charting solution that can be used with any scripting language.

- Works with any scripting language and runs on all major browsers
- No external ActiveX control or component required to render charts
- AutoFit allows charts to be easily resized to any width and height

FusionCharts is a Flash charting component that can be used to render data-driven & animated charts for your Web applications. FusionCharts allows you to create interactive and professional looking charts quickly and easily. It includes the following chart types: column 3D/2D, pie, doughnut, line, area, stacked, combination charts, bubble, XY Plot and scroll charts. With FusionCharts, you can update charts on client side, invoke JavaScript functions as hotspots links or make dynamic calls for XML data to the server without

involving any page refreshes. All the charts are rendered on the client side using the widely installed Adobe Flash using the server is only responsible for streaming the pre-built SWF files and your XML data files to the end viewer.

It can be used with any Web scripting languages like .NET, ASP, JSP, PHP, ColdFusion and Ruby on Rails FlashCharts delivers interactive and eye catching Flash charts.

Janus Systems

Janus WinForms Controls Suite V3.5

Add Outlook style interfaces to your .NET applications.

Janus WinForms Controls Suite

Office 2007
Janus WinForms Controls Suite offers Office 2007 visual style for all controls included in the suite.

Janus Schedule Control for .NET
Present appointments and related owners in different views, representing Days, WorkWeeks, Weeks and Months.

Ribbon Component
Janus WinForms Controls Suite includes a Ribbon control.

- Includes Outlook style grid, calendar view, journal, Ribbon and shortcut bar
- Supports snap lines, base lines, ImageList keys and more
- Unbound mode in GridEX allows you to populate rows using AddItem method

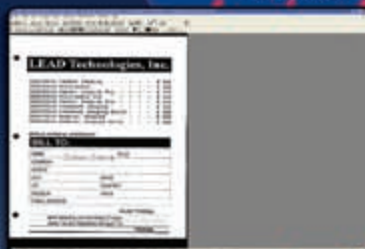

Janus WinForms Controls Suite consists of 100% .NET managed code components that are designed to provide user interfaces for Microsoft .NET Smart Client applications patterned after Microsoft Outlook. Janus WinForms Controls Suite contains Janus GridEX for .NET (Outlook Grid), Janus Schedule for .NET (Outlook Calendar View), Janus Timeline Control for .NET (Outlook Journal), Janus ButtonBar Control for .NET and ExplorerBar Controls for .NET (Outlook Shortcut

Bar), Janus CommandManager (Menus and Toolbars), Janus PanelManager (Outlook / VS.NET panes), Janus TabControl (tab control) and Janus Ribbon for .NET (Office 2007 style Ribbon bar). Janus GridEX for .NET is a data-aware, fully editable grid component that can be bound to any table in a dataset or to any other data source that supports IList, ITypedList or IBindingList interfaces. Janus GridEX for .NET does not sacrifice any group, sort or filter capabilities, when it is bound.

LEADTOOLS v.16 – .NET, WPF, WCF, WF, C API, C++ Class Lib, COM & more!

Document

Form Recognition & Processing

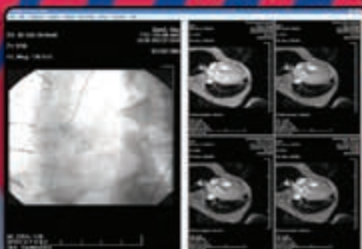

Barcode

Mark-up

DICOM Medical

Multimedia

Develop your application with the same robust imaging technologies used by **Microsoft, HP, Sony, Canon, Kodak, GE, Siemens, the US Air Force and Veterans Affairs Hospitals.**

LEADTOOLS provides developers easy access to decades of expertise in color, grayscale, document, medical, vector and multimedia imaging development. Install LEADTOOLS to eliminate months of research and programming time while maintaining high levels of quality, performance and functionality.

- **Image Formats:** All industry standards including TIFF, EXIF, PDF, JPEG/JPEG2000, DICOM, PCL, DWG and hundreds more.
- **Image Compression:** From standard JBIG, JBIG2, ABIC, JPEG and CCITT G3/G4 to LEAD's specialized ABC, CMP and CMW compression.
- **Display Controls:** Scroll, zoom, pan, magnify glass, brightness/contrast/gamma, window level.
- **Image Processing:** 200+ filters, transforms and color conversion functions with extended grayscale (10 to 16-bit) support.
- **OCR/ICR/OMR:** Full page or zonal multi-threaded recognition with formatted output including PDF, DOC and TXT for Win32 and x64.
- **Barcode:** Read/write all industry standard 1D and 2D barcodes (DataMatrix, PDF417, MicroPDF417, QRCode and more).
- **Forms Recognition and Processing:** Automatically identify forms and extract user filled data.
- **Document Cleanup/Preprocessing:** Deskew, despeckle, line and border removal, registration marks and more.
- **PDF and PDF/A:** Read/write raster and text searchable PDF files.
- **Annotations:** Interactive UI for document mark-up, redaction and image measurement (including support for DICOM annotations).
- **Grayscale Imaging:** Display and process signed/unsigned 10-16 bit, 32 bit data.

- **Medical Web Viewer Framework:** Plug-in enabled framework to quickly build high-quality, full-featured, web-based medical image delivery and viewer applications.
- **Medical Image Viewer:** High level display control with built-in tools for image mark-up, window level, measurement, zoom/pan, cine, and LUT manipulation.
- **DICOM:** Full support for all IOD classes and modalities defined in the 2008 DICOM standard (including Encapsulated PDF/CDA and Raw Data).
- **DICOM Communications:** Full support for DICOM messaging and secure communication enabling quick implementation of any DICOM SCU and SCP services.
- **WPF (XAML):** Viewer, Image List, Annotations, Transitions and WIC Codecs.
- **AJAX** Web Form Image controls for developing rich web applications.
- **JPIP** Client and Server components for interactive streaming of large images and associated image data using the minimum possible bandwidth.
- **Scanning:** TWAIN 2.0 and WIA (32 and 64-bit), autodetect optimum driver settings for high speed scanning.
- **DVD:** Play, create, convert and burn DVD images.
- **Multimedia:** Capture, play, stream and convert MPEG, AVI, WMV, MP4, MP3, OGG, ISO, DVD and more.

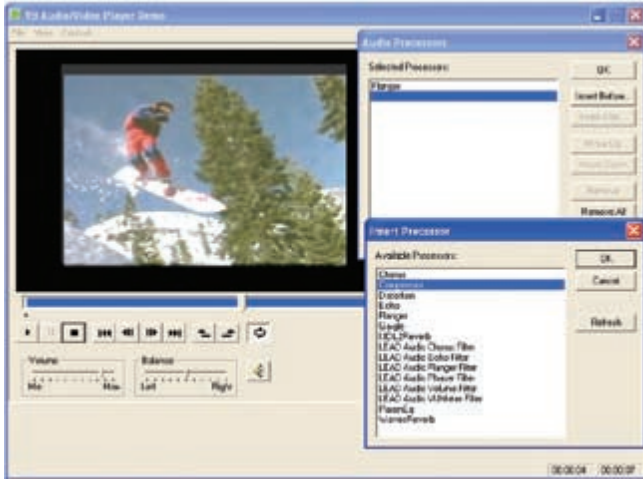

LEADTOOLS SDKs feature LEAD's iCompress™ Technologies.
Free 60 Day Evaluation! www.componentsource.com

LEAD Technologies

LEADTOOLS Multimedia SDK V16.0

Create professional, high-quality multimedia applications.

LEADTOOLS Multimedia SDK

Multimedia Capture
Capture multimedia sources processing both video and audio on capture if required.

Multimedia Playback
Playback multimedia files processing both video and audio during playback if required.

Multimedia Converter
Convert multimedia files to any major multimedia format, full control over format properties available during conversion.

- Convert to/from WAV, AVI, WMA, WMV, MPEG-1, MPEG-2, MOV, Quicktime, etc
- Now supports DVD burning, DVD menu authoring, preview and pausing during conversion, plus ISO and MPEG-2 DICOM formats

LEADTOOLS Multimedia SDK lets you create applications with multimedia functionality such as Capture, Play, and Edit, as well as the latest DirectShow filters and multimedia file support - load and convert to and from many multimedia formats (AVI, MPEG-2, MPEG-1, ISO (MP4, 3GPP, AAC, AVC1, MOV), XVID, ASF, WMV, WAV, WMA, OGG, etc). You can get programmatic

control over multimedia processors, compressors, video and audio inputs, types and sub-types; as well as increased camera control (brightness, contrast, zoom, etc); more flexible capturing options and much more. It also includes HTML examples for streaming Ogg H264, WMV H264 and Flash video from Websites.

Nevron

Nevron Chart for .NET Enterprise 2009 Vol. 1

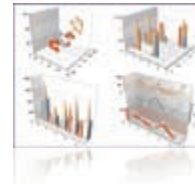

A powerful, flexible and extensible charting component for Windows Forms and ASP.NET.

Nevron Chart for .NET (Windows Forms and ASP.NET)

Professional Quality
Nevron Chart for .NET will allow you to produce professional presentation quality with stunning visual effects.

Customization and 3D Support
Nevron Chart includes advanced customization and 3D Charting support.

Nevron Financial Charting
Nevron has introduced Statistical and Financial functions to allow better understanding of the data with presentation quality.

- Includes many chart types and circular/radial/linear gauges
- Includes scrollable axes, integrated legend, chart annotations, watermarks and an extensible chart layout manager

Nevron Chart for .NET has been designed to be extensible, efficient and feature rich. It can display virtually any 2D or 3D chart including: bar, line, step line, area, pie, point, bubble, stock, floating bar, radar, polar, high low, mesh surface, grid surface, shape, smooth line, floating bar, Venn and error with many variations (like scatter XY and XYZ line, stacked bars etc).

The component features full Visual Studio design time support with many advanced features like style editors. It also comes with support for many advanced features including: customizable legends, unlimited axes, zooming and scrolling, grouping, filtering, full set of gauge types, advanced formula support, financial and statistical functions and more.

.NETXPERT

InfoScope V2.5

Easily post InfoPath forms to a Web server.

- Interoperable with all kinds of .NET based Enterprise solutions
- Includes Windows SharePoint Services (WSS) support

InfoScope

InfoScope is an InfoPath run time engine that enables users who don't have InfoPath to use InfoPath forms through a Web browser. InfoScope enables inputs and updates of data within InfoPath, and makes the entire process interoperable with a back end system via a Web browser. InfoScope provides Service Oriented Architecture (SOA) which meets various different types of complicated business requirements through .NET technology. This enables customers and/or partners to integrate into your business processes via online

electronic forms.

InfoScope also provides an InfoScope SharePoint Web Part Control. It's a real InfoPath form not a Web page. No roundtrip and no modification. Just publish and you are ready to use InfoPath. Since InfoScope is auto-installed to clients, you won't meet deployment issues.

InfoScope also enables Web pages to catch events so that you can develop Web applications using InfoPath forms.

ToolTipsFactory for .NET V1.2

Advanced, single/multi-line text, image and animated image tooltips.

- Includes four types of tooltip controls; SingleLine, MultiLine, Image and Animation
- All layout elements are fully customizable in code or through Visual Studio

ToolTipsFactory for .NET

ToolTipsFactory for .NET is a set of components designed to add visually and functionally sophisticated ToolTips to Windows Forms applications. These components give application developers the possibility to add really dynamic tooltips to their applications, with single or multi-line text, images or even animations as content. They also give programmers full control over size and layout of the ToolTip's background, border and behavior.

The size of the selected font and the vertical screen resolution. If you prefer images in your tooltip, ToolTipsFactory for .NET provides icons, photographs, dynamically created drawings etc. The images can be assigned at design time in Visual Studio .NET, loaded or dynamically created at runtime by the application.

If you are creating multi-line tooltips the number of lines is only limited by

ToolTipsFactory for .NET is 100% managed code and includes full Visual Studio integration and designer support. Plus it can also be integrated with other third party .NET controls.

ActsOne

BlueOne Components V2.0

Add diverse Adobe Flex UI functionality to your Web site.

- Includes grid, grouping, tree, totaling, calculation, input, menus, navigation features and more
- Extends Flex component functions

BlueOne Components

BlueOne Components are custom UI components, developed by ActsOne using Action Script 3.0, with rich functions to make Adobe Flex applications more useful. BlueOne Components showcases many effective, easy-to-use, rich components such as BlueDataGrid, Blue MDI Window and BluePanel. BlueDataGrid in particular has many functions including multi header, data merging, tree datagrid, OLAP grid, Excel export, totaling and sub totaling features. BlueOne Components includes support for Flex based PDF, Word

and Flash reporting and supports an integrated Web UI as well as an easy-to-use editing environment.

Other features include: skin and interface generation an extended textbox, easy data grid cell extending, performance implementation, automatic cell calculation, cell drill-down functions, column splits, MDI (Multiple Document Interface Window) and an extended tree & button control.

Btrieve Classes for .NET V3.0

Fast, easy to program access to Pervasive.SQL databases from .NET.

- Provides direct access to Pervasive's transactional interface from within .NET
- Extended class enables maximum performance when searching Pervasive data

Btrieve Classes for .NET

Btrieve Classes for .NET is a set of .NET database access support classes that enable fast, easy to program access from .NET programs to Pervasive.SQL databases via the Btrieve API. As such they greatly help developers looking to write .NET programs accessing data in Pervasive.SQL databases or those looking to migrate existing pre-.NET Btrieve/Pervasive applications to .NET.

This product includes two types of class library the first (DDF Class) is specifically designed for the .NET Framework and is composed of classes that enable smart and efficient access to column data and definition of data type conversion code. The second type of class (Native Class) provides Btrieve API level access from .NET managed code.

Btrieve Classes for .NET performs with greater efficiency and hence is faster than ADO.NET or Pervasive's OLE DB provider.

Btrieve Classes for .NET includes full support for Pervasive PSQL v9 and Visual Studio.

Aurigma

Graphics Mill V5.0

Add advanced Image processing to your .NET applications.

- Load/save images from/to files, apply different transformations and effects, draw lines, curves, shapes and text
- Includes Windows Forms and Web Form controls

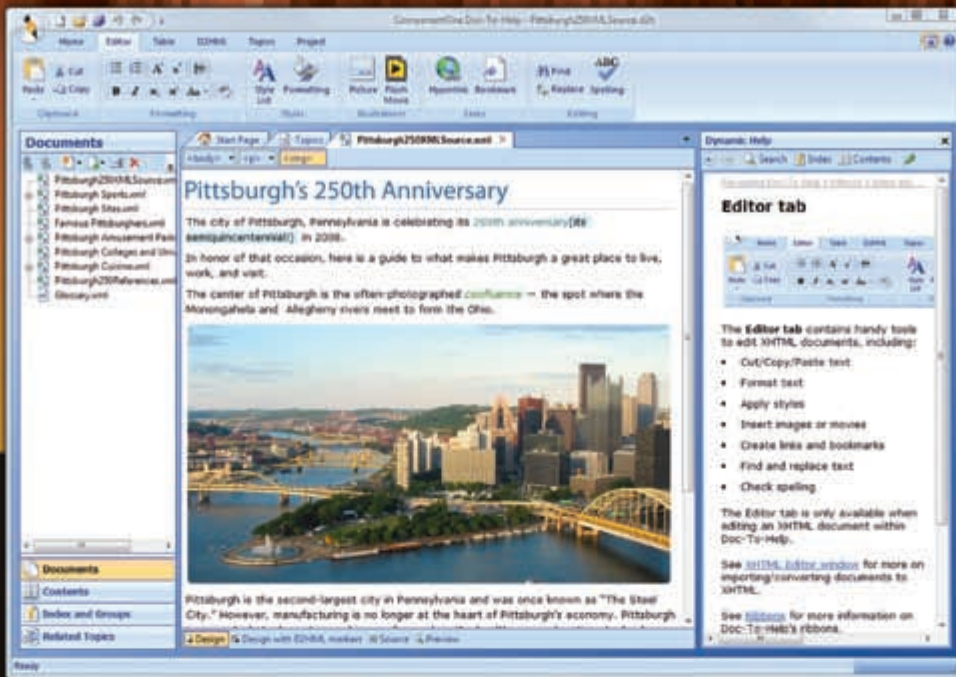

Graphics Mill

Graphics Mill for .NET can be used to create photo hosting Websites, applications which apply preprint preparation to images, scripts which generate Web graphics, or any other advanced imaging application you might need. It includes a set of classes (non-visual) which provide various imaging operations (load and save images from and to files,

transformations and effects etc.). Support of various formats: JPEG, PNG, GIF, WBMP, TIFF, BMP (read and write), PCX, PSD (read only) and PDF, SWF (write only) is included. Various vector objects can also be loaded into the control (rectangles, ellipses, text, polylines and polygons) and object appearance (color, fill) can be modified at runtime.

Change Vision JUDE V5.4.1

Business process UML modeling tool.

- Edit model information directly, without opening dialog boxes
- Supported diagram types include Class, UseCase, Sequence, Collaboration, StateChart, Activity, Component and Deployment

JUDE

JUDE includes basic features to make modeling simple and user friendly. JUDE is suitable for business use, handling large-sized models and document creation. It includes enriched features, such as the ability to change your view freely using a map view, zoom by dragging, unlimited undo/redo, the ability to output project information to a CSV file, automatic generation of class diagrams with model information, diagram creation guidance and more. JUDE supports basic UML 1.4 diagrams

including: UseCase, Sequence, Collaboration, Statechart, Activity and Class (Object/Package/Robustness).

You can lock project files from other users, set the font for the whole project file and configure print setting for each diagram. JUDE also lets you display multilingual aliases (e.g. English and Japanese) on diagrams, export diagrams to RTF and HTML documents and generate Class diagrams from Class files.

Bennet-Tec Information Systems MetaDraw ActiveX V3.1

Give your application support for the creation, editing, and displaying of Metafiles.

- Full support for Object Oriented editing: moving objects, sizing, change colors and other attributes
- Save/Load pictures to/from database fields

MetaDraw

MetaDraw is a special purpose picturebox/image editing component. It is an Object Oriented image component for multimedia, image editing/annotation, etc. MetaDraw allows you to create, edit, display and save pictures built from a set of graphic objects. To your application, it looks like a standard picturebox, but it offers unique support for metafiles - a

graphical format well suited to the drawing and/or moving of graphical objects - including the ability to tag individual graphic objects for HyperGraphic/HotSpot applications.

You can also use MetaDraw as a metafile viewer with support for zoom, scroll and even selective display of individual elements.

ComponentArt
Build Something Amazing

ComponentArt ComponentArt Web.UI 2009.1 for ASP.NET

Advanced user interface suite of ASP.NET AJAX controls.

- Delivers fast, lightweight and feature-rich user interfaces
- Client-side API featuring Microsoft AJAX library syntax allows for total control over structure and data, with persistence to the server

ComponentArt Web.UI for ASP.NET

ComponentArt Web.UI for ASP.NET includes 22 user interface controls for the development of sophisticated Web applications. It includes the following AJAX controls: Calendar, CallBack, ComboBox, Dialog, Editor, Grid, Menu, MultiPage, NavBar, Rotator, SiteMap, Snap, SpellCheck, Splitter, TreeView, Upload and WebChart Lite. All controls are built on the client-side component

model introduced by ASP.NET AJAX, exposing JavaScript APIs that allow full client-side programmatic control over any part of the user interface. ComponentArt Web.UI navigation controls (Menu, TreeView, NavBar, TabStrip and SiteMap) provide meaningful content to search engines by generating a crawler friendly representation of the navigation.

Data Techniques ImageMan DLL V8.2

Add image processing and scanner support to your applications.

- Provides load, save, display, print, conversion functionality
- Process images in over 35 popular raster and vector formats
- Filters include emboss, sharpen, blue, edge detection and more

ImageMan

ImageMan components are optimized for Windows and include support for loading, saving, displaying, printing, converting, and processing images in more than 35 of the most common raster and vector formats (FlashPix, Photo CD, JPEG, TIFF, BMP, RLE, DIB, EPS, GIF, PNG, TGA, IMG, DXF, PCX, DCX etc). It also includes built-in database support for writing and reading image

data from memory. ImageMan's API includes functions for writing and reading image data from memory blocks making it ideal for use with databases. And with the low level functions you can even write your own low level I/O handlers. ImageMan is available as an ActiveX OCX, .NET or a DLL for maximum compatibility with your environment.

Crownwood Software DotNetMagic V6.0

Create Microsoft Office style applications in minutes.

- Provide Visual Studio style docking windows with docking indicators
- TabbedGroups control provides flexible, customizable MDIs
- Includes Windows Media Player style rendering

DotNetMagic

DotNetMagic user interface library provides Office 2007 style rendering including the blue, silver and black Office schemes. It also has a docking window system that offers all the features found in Visual Studio .NET. It mimics the appearance of Visual Studio .NET and features; multiple content in same row or column, multiple content inside same docking window, the ability to restore windows in same row or column and an auto hide capability. The TabbedGroups control provides a similar ability to organize documents as found in Visual

Studio .NET. The window docking features include: edge docking, floating, pinnable, sliding auto hide and hide & show. The customizable Tree control includes: none, single or multi-select modes, support for XP Themes, groups & list style and full color customization.

DotNetMagic is available with full source code, 12 months of updates and 12 months of email support. It is Visual Studio 2005/2008 compatible and comes with C# and VB.NET samples.

DBI Technologies

Solutions::Schedule for .NET V2.0

Build team management and resource planning solutions.

- Share schedule, appointment, contact, location and task information
- Supports timebar linking, cell-level formatting, multi-select timebar and more

Solutions::Schedule for .NET

Solutions::Schedule for .NET allows developers to create scheduling solutions such as those found in the healthcare or services sector.

Solutions::Schedule for .NET includes intuitive mouse driven scheduling and planning with Gantt-style project management features. Other features include independent cell formatting, timebar overlap, split and linking

styles. You can easily add a visual reference point for the current date and time in a schedule by using the Current Time Line feature. Time lines extend vertically through the schedule area and are drawn along the major time segments. Developers can also add zoom-in/out capabilities by programmatically changing the value of the TimeDistance property.

dLSoft

dBarcode.NET Datamatrix V3.1

Generate 2D barcode images in the .NET framework.

- Supports both square and rectangular Datamatrix symbols
- Save barcodes in many graphic image formats (BMP, GIF, JPEG, PNG, TIF or WMF)

dBarcode.NET Datamatrix

dBarcode.NET Datamatrix is a fully-managed-code component for generating 2D barcode images in the .NET framework. Barcode images may be displayed on screen, printed on a printer, copied to the clipboard or saved as a graphics file or memory stream. For most barcode types, it also generates pattern strings for developers who wish to draw their

own bars. When creating bitmap images the component may be set to adjust the width of the bars to be an integer number of pixels, ensuring that the resultant barcode is of high quality.

dBarcode.NET Datamatrix also contains its own dialog box which may be used by the developer to allow the enduser to select barcode properties.

Gravitybox Software

Gravitybox Schedule V7.5

Build custom scheduling functionality into your applications.

- Comes with 10 different view modes
- Perform cross-window and cross-application drags of scheduled appointments
- In-place editing/read-only property for appointments

Gravitybox Schedule

Gravitybox Schedule is a COM-based component that can handle any number of appointments with color coded categories. It supports day, object and combination schedules. Gravitybox Schedule supports any number of days or objects or both on either axis with up to 24 hours per day displayed on the other axis. It allows for drag-and-drop schedule moves or copies and includes conflict resolution routines to determine, eliminate, or disallow conflicting appointments.

The date and time ranges are completely configurable. All appointments are stored in the ScheduleItems collection and can be loaded/saved to a database in one loop. Each appointment can be associated with a color-coded category. All categories are configured with the "Categories" collection. You can add whichever ones you wish and associate a color with each. In addition, each appointment can be associated with a provider.

Inabyte

InaCalc.Net V3.02

Enable advanced calculations in your accounting or spreadsheet application.

- Integrates expression parsing, evaluating, and dependent formula recalculation
- Includes custom function support and multiple formula recalculation

InaCalc.Net

InaCalc.Net supports conventional math operators and functions and is suitable for heavy-duty number crunching. It also supports other data types, such as string, date-time and logical and comes with operators and functions for these data types. It allows defining variables and sets of related formulas that implement spreadsheet-like recalculations. The InaCalc.Net

component integrates expression parsing, evaluating and dependent formula recalculation. It is useful in two general areas; when a formula has to be defined, and evaluated at runtime.

The product supports spreadsheet-like multiple formula recalculation, as well as custom function support and virtual variables.

IP*WORKS!

NEW VERSION 8.0

The latest evolution of the most comprehensive suite of Internet communications components for professional developers is here!

The highly anticipated IP*Works! Version 8.0 release represents a leap forward in design, performance, and new functionality! With more than 40+ components supporting every major Internet protocol and development technology, it is easy to see why IP*Works! is the professional developers #1 choice for connected application development.

Get your copy of IP*Works! V8 as part of our all-inclusive Red Carpet Subscriptions - www.componentsource.com

Iocomp Software

Iocomp .NET WinForms Instrumentation Pro Pack V4.0

Add real-time instrumentation displays to your .NET applications.

- Optimized to get the best possible performance
- Used for Scientific, Engineering, Medical, Maritime, Factory Automation, Aerospace, Telecomms, Military, Power Systems applications

Iocomp .NET WinForms Instrumentation Pack

Iocomp .NET WinForm Instrumentation Pro Pack is a suite of 55 realtime display components for instrumentation applications. It includes the following components: ClockAnalog, Compass, GaugeTube, ImageDisplay, LCDMatrix, LedArrow, MatrixButtons, MatrixLeds, Motor, ObjectCanvas, Panel, PercentBar, PercentPie, PhonePad, Pipe, PipeJoint, RotationDisplay,

SevenSegmentClockSMPTe, SlidingCompass, SlidingScale, SpectrumDisplay, SwitchLever, SwitchQuad, SwitchRocker, SwitchRocker3Way, Tank and Valve.

All controls are object oriented and share many common classes for consistency, ease of use, and interfacing with each other.

Lassalle Technologies

AddFlow Suite for .NET V2.2

Create interactive flowcharts & workflow diagrams.

- Drawings can be made interactively or programmatically
- Distinct shapes, styles, colors, fonts etc. can be defined
- Export diagrams to SVG or Metafiles

AddFlow Suite for .NET

AddFlow Suite for .NET includes AddFlow for .NET and LayoutFlow for .NET. Addflow for .NET lets you quickly build flowchart enabled applications with distinct colors, fonts, shapes, styles, pictures, text, etc. for each object of the flow chart diagram (node or link). It also supports custom shapes, metafiles, serialization, multi-level undo/redo, print, zoom, Bezier

and spline curves, reflexive links, link jumps, link autorouting, multiselection, scrolling, and more. Also included is an OwnerDraw property to provide custom drawing for an item or for the entire AddFlow for .NET control. LayoutFlow for .NET is a collection of 5 layout components to enable you to automatically display graphs or flow charts following aesthetic rules.

Keyoti

RapidSpell Desktop .NET V4.0

Integrate spell checking functionality into your .NET and WPF applications.

- Interactive dialog checking
- Includes support for 3rd party components
- WPF support includes dialog based checking of WPF's TextBox and RichTextBox controls.

RapidSpell Desktop .NET

RapidSpell Desktop .NET allows you to add "as-you-type" spell checking to any textual application (email, word processor etc.) with a couple of lines of code. It can also be used in non GUI contexts using its spell checking API.

RapidSpellAsYouType (as you type check control) and RapidSpellChecker (core spell checker class).

RapidSpell Desktop .NET includes 140,000 word U.S. & U.K. dictionaries (and user dictionary), multi-threaded GUI and a suggestion engine. Additional dictionaries are available for other languages.

RapidSpell Desktop .NET provides 3 spelling components; RapidSpellDialog (dialog based checker control),

Neodynamic

Barcode Professional for Windows Forms Ultimate V6.0

Add barcode image generation to your Windows Forms applications.

- Supports all major barcode formats
- Deliver barcode images from XML Web Services
- Automatically computes the checksum or check digits

Barcode Professional for Windows Forms

Neodynamic Barcode Professional for Windows Forms generates barcode images for Linear 1D and 2D Barcode symbologies including Codabar, Code 11, Code 16k, 39, Code 93, 128 (A, B, C), Data Matrix ECC200, EAN 8, EAN 13, JAN, Industrial 2 of 5, Interleaved, ISBN, PDF 417, Postnet, UCC EAN 128, UPC A, UPC E, etc. It also includes support for USPS (United States Postal Service),

Royal Mail, Deutsche Post, Australia and Swiss Postal Services barcodes.

Other features include: Crystal Reports .NET support, transparent background support, the ability to save barcode images as stream objects, full design-time support in Visual Studio, support for Binary, SOAP and XML serialization and data binding.

NETRONIC Software VARCHART JGantt V2.3

Add interactive Gantt diagrams to your applications.

- User interactions such as create, delete and drag & drop activities are handled by the component
- Includes zooming and scaling of diagrams

VARCHART JGantt

VARCHART JGantt is a component written in Java, that easily lets you integrate Gantt charts into your application. Activities in a chart of VARCHART JGantt can be displayed either by a variety of pre-defined bar shapes, or can be composed from scratch. Any shape and pattern is available, even dynamic bars that actively grow or diminish to indicate

the degree of completion of an activity. Bars can also be connected by links of different types. Vertical and horizontal grids can be placed in the Gantt graph and the time scale can be customized by position, scaling, colors and font.

Settings to define the appearance and behavior of the Gantt chart can be defined at design time.

Nitobi

Nitobi Complete UI for ASP.NET 2008

Provide desktop-like Web user interfaces without complicated frameworks.

- Includes 9 cross-browser, AJAX components
- Full support for an array of browsers including Internet Explorer (IE 6+), Firefox, Mozilla 1.3+, Camino and Netscape 7+

Nitobi Complete UI

Nitobi Complete UI includes a suite of cross-browser, AJAX components. Components include: Grid (offering Excel copy and paste, in-place cell editing), Combobox (paging, suggestive searching and fuzzy-searching), Tabstrip (AJAX tab-strip, client-side statefulness and skinnability), Tree (dynamic tree component with AJAX drill-down, unbound mode and data-driven

sidebar), Fisheye (featuring the fisheye zooming effect, allowing easy access to long lists), Callout (rich tooltip and messaging providing user alerts without difficult coding), Spotlight (for creating guided tours of Web applications), Calendar (a lightweight, DHTML calendar picker) and AJAX Toolkit (a library containing a set of tools used in Nitobi components that can be re-used).

Newtone ImageKit.NET V1.0

100% native .NET image processing component.

- Load and save images to a variety of image formats
- Apply various imaging effects and transformations and display those images in various controls

ImageKit.NET

ImageKit.NET lets you add image processing to your .NET applications quickly and easily. You can retrieve images from TWAIN scanners and digital cameras; load & save image files in a variety of formats; apply image filters and transformations to your images; display images in the display, pan window, or thumbnail controls.

ImageKit.NET supports a variety of raster and vector file formats and compressions. Native .NET support

includes: BMP, JPEG, GIF, TIFF, PNG, WMF and EMF. ImageKit.NET includes many image effects and transformations including: creating or copying images, combining images, layering images, copy and paste images plus numerous effect filters including blur, mosaic, outline, emboss, oilpaint, canvas, glasstile, lens, ripple, whirlpinch, waves and motionblur. ImageKit.NET contains components for both Windows Forms and Web Forms applications.

O2 Solutions PDF4NET V3.3.4

Add PDF capabilities to your .NET applications.

- Create and edit PDF files and perform automated PDF form filling
- Unlimited pages per document, each with its own size and orientation
- Supports PDF annotations, layers and alpha transparency

PDF4NET

PDF4NET is a .NET library for creating, editing and filling PDF files on the fly from any .NET application. PDF4NET provides a simple API that allows you to create complex PDF documents, or to edit existing PDF files with a few lines of code. Its core functionality can be divided into 3 main areas: PDF creation, PDF editing and PDF forms filling.

Other features include native support for most 1D and 2D barcodes and the ability to create headers, footers, page templates and layers. The library provides support for both standard .NET Framework and .NET Compact Framework. Project costs are reduced because it can be distributed royalty free.

PDFlib PDFlib+PDI V70.3

Create PDF files from within server-side or client-side software.

- Includes functions for creating text, graphics, images and links
- Adds full support for LZW-compressed TIFF and GIF images
- Incorporate existing PDF pages in your generated output

PDFlib+PDI

PDFlib+PDI is a development tool for PDF enabling your software or generating PDFs on your server. PPDFlib+PDI offers a simple-to-use API for programmatically creating PDF files from within your own server-side or client-side software. PDFlib+PDI doesn't make use of third-party software for generating PDFs, nor does it require any other tools.

PDFlib+PDI includes all PDFlib functions, plus the PDF Import Library (PDI) for including existing PDF pages in the generated output. PDI allows you to add text, images, barcodes and more to existing PDFs.

PDFlib+PDI is available for all major operating systems and development environments.

plexityHide.com GTP.NET V3.1

Add interactive Gantt charts and scheduling to your applications.

- Supports AJAX with client-movable and resizable time items
- Features asynchronous collision detection and handling of time items
- Security awareness enables deployment on XBAP or ClickOnce

GTP.NET

GTP.NET's overall goal and purpose is to let you visualize and manipulate time based information. GTP.NET includes a collection of user interface components which handle time blocks. The time blocks are displayed in a Gantt chart or a schema view. The times are connected to an owner, for example a person or an activity in a project. You can also use it to display dependencies and collisions between times, which gives the end user a graphical way to view and modify the

project. GTP.NET includes the ability to select and re-assign links and also provides databinding for links between time items. The components can be delivered via WinForms, AJAX, ASP.NET, and even in reduced trust environments like ClickOnce and XBAP.

GTP.NET includes pre-built sample applications for a Project Planner, Resource Booker and Weekly Planner. All three samples are short and to-the-point of the problem they solve.

Pegasus Imaging Corporation FormSuite V2

All Pegasus Imaging's forms processing components in one product.

- Image viewing, conversion, TWAIN scanning, image cleanup, printing, OMR, OCR, ICR and more
- All forms components communicate with one another using memory-to-memory data transfers.

FormSuite

FormSuite includes FormFix Professional, SmartZone ICR/OCR Professional, ScanFix Xpress and ImagXpress Document. FormFix delivers both .NET and ActiveX COM components offering bitonal template-based form identification, form registration, form drop out, and OMR technology, to developers of forms processing applications.

SmartZone ICR/OCR offers developers the ability to perform zonal OCR (machine print character recognition) commonly used in forms processing applications. ScanFix Xpress offers bitonal document image enhancement technology. ImagXpress Document is ideal for document imaging and forms processing application development.

Crescent QuickPak V4.5

Visual and performance enhancements for Windows applications.

- Custom calendar, combobox, data entry and presentation controls for ActiveX applications
- Easily access the power of the Windows API

Crescent QuickPak

Crescent QuickPak is a comprehensive collection of 32-bit ActiveX components that can be used to develop applications that will reduce development time and increase productivity. Crescent QuickPak includes the following custom controls; calendar display, caption, enhanced frame and checkbox, extended command button, enhanced combobox, form enhancement, hypertext, frame and option button, data-specific input edit controls, enhanced list

boxes and additional display controls. It also includes functions to open, read, and parse IIS log files, convert log files to HTML tables, and get and set IIS properties in either the local or remote system registry. It has low-level routines for fast performance. Crescent QuickPak also has high-level methods such as financial and statistical routines, file operations: searching and encryption, copying on wild card specifications, file access routines and error-handling.

Seekford Solutions

HTTP Wizard SSL V3.0

Access HTTP Servers with a minimal amount of code.

- Use all standard HTTP/1.1 RFC spec commands such as GET, HEAD, POST, TRACE, DELETE, PUT plus custom commands
- Provides support for communicating via SSL

HTTP Wizard SSL

HTTP Wizard SSL is an ActiveX component that allows you to easily upload/download files (text, graphic images, sound, video etc.) to or from a web server. For example you could use it to transfer data to a database on a web server. HTTP Wizard SSL handles all the RFC specification commands such as; GET, POST, TRACE etc. With the asynchronous operation and the

threaded synchronous version, your application should never hang. It provides support for communicating via SSL so your data transmissions can be secure and safe as well as normal cleartext operations. The control is programmer friendly and has time saving features like auto-connect and disconnect for methods and simple to use method calls.

SlickEdit

SlickEdit for Windows 2008 (V13)

Create, navigate, modify, build and debug code faster and more accurately.

- Features include auto-completion, automatic comment wrapping, smart line selections and syntax expansion
- Now provides automatic XML/HTML formatting as you edit

SlickEdit

SlickEdit is a multi-platform, multi-language code editor supporting seven platforms, over 40 languages, and 13 editor emulations. It lets you write more code in less time and helps you spend less time waiting for results. SlickEdit can be used as a standalone development environment or as a complementary editor, providing programmers with a tool to create,

navigate, modify, build, & debug code faster & more accurately. SlickEdit's features include Code Navigation, Preview Tool Window, References Tool Window, Syntax Expansion, Surround With, Auto-Completions and many more. Developers can type fewer characters and make fewer errors using syntax expansion, completions, aliases, and code templates.

SourceGear Corporation

SourceGear Vault V4.1

A compelling replacement for Visual SourceSafe.

- Offers full integration into the Visual Studio .NET environment
- Includes an Eclipse client
- Client/Server communication over HTTP or optionally with SSL

SourceGear Vault

SourceGear Vault is a version control system for Windows developers, with complete integration into the Visual Studio .NET environment. SourceGear Vault is implemented entirely in the .NET Framework and uses SQL Server 2000 and 2008 for its repository storage. SourceGear Vault is designed specifically to offer a seamless transition from Visual SourceSafe and includes an import tool which can be used to migrate data from a SourceSafe database into a Vault

repository; every version of every file is imported, including all the history. SourceGear Vault's basic architecture is a centralized Vault server which manages one or more repositories. It includes several client applications and also provides a way to create custom clients using any .NET language.

SourceSafe users can begin using Vault with no learning curve. The terminology is the same, and all major VSS features are present.

FinalBuilder V6.0

Automated build and release management solution.

- Integrates with version control systems/Source code repositories
- Includes a broad range (600+) of action types that cover almost any task you might need to automate

FinalBuilder

FinalBuilder is an automated build and release management solution for Windows software developers and SCM (Software Change Management) professionals. Use FinalBuilder to define, debug, maintain, run and schedule reliable and repeatable build processes. FinalBuilder's user interface has been carefully crafted to make it as easy-to-use as possible. Anyone in your team can use FinalBuilder to automate tasks. You can compile applications from source code, compile setup

installer programs, work with version control systems, handle versioning with ease, create and edit INI files and Windows registry keys, burn CDs and DVDs, or create CD/DVD images (ISO images), zip and unzip files and other archive formats, run automated testing, FTP files to/from servers, send emails, post on news servers, handle errors, run multiple tasks in parallel and dynamically change the build flow, iterate over sets of files and other lists and more.

All New User Interface Components for 2009!

Cutting-Edge tools for .NET WinForms, ActiveX and MFC

Calendar

Easily create a scheduling calendar that can manage appointments arranged by day, week, work week or month.

Command Bars

Office style Ribbons, Command Bars and Menus providing a fully customizable application workspace.

Controls

Large collection of components to handle many of today's modern GUI development requirements.

Docking Pane

Visual Studio style docking including tear off tabs and auto hide windows to help organize your application.

Property Grid

Visual Studio style Property Grid to easily create a hierarchical list of editable properties and data types.

Report Control

Outlook style grid to create, group and sort data in a flat or hierarchical format easily bound to a data base.

Shortcut Bar

Office Shortcut Bar menu similar to the navigation panel seen in Outlook to help organize your application.

Skin Framework

Application skinning framework technology that can apply a completely new skin to your entire application.

Syntax Edit

Sophisticated text editor supporting advanced text block grouping, syntax colors and line numbers.

Task Panel

Customizable Task Panel similar to what is seen in Office, Windows Explorer or Visual Studio's Toolbox.
